SUPRAX
Working Continuously
24 Hours a Day...
Once a Day
•Otitis Media* •Bronchitis* •Pharyngitis/Tonsillitis*
*Due to indicated susceptible organisms.
Please see brief summary of Prescribing Information on adjacent page for WARNINGS, ADVERSE REACTIONS, and CONTRAINDICATIONS. GI side effects are the most frequently reported adverse effects.
SUPRAX is administered as a single dose, once a day, or if preferred, in equally divided doses twice a day.
ONCE-A-DAY
SUPRAX®
cefixime
ORAL SUSPENSION
100 mg/5 mL
TABLETS
400 mg

TABLETS
400 mg

Working 24 hours a day

Brief Summary

SUPRAX®
Cefixime
Oral

Please see package insert for full Prescribing Information.

INDICATIONS AND USAGE

SUPRAX is indicated in the treatment of the following infections when caused by susceptible strains of the designated microorganisms.

Uncomplicated Urinary Tract Infections caused by *Escherichia coli* and *Proteus mirabilis*.

Otitis Media caused by *Haemophilus influenzae* (beta-lactamase positive and negative strains), *Moraxella (Branhamella) catarrhalis*, (most of which are beta-lactamase positive), and *Streptococcus pyogenes*.*

Note: For information on otitis media caused by *Streptococcus pneumoniae*, see **CLINICAL STUDIES** section.

Pharyngitis and Tonsilitis, caused by *S pyogenes*.

Note: Penicillin is the usual drug of choice in the treatment of *S pyogenes* infections, including the prophylaxis of rheumatic fever. SUPRAX is generally effective in the eradication of *S pyogenes* from the nasopharynx; however, data establishing the efficacy of SUPRAX in the subsequent prevention of rheumatic fever are not available.

Acute Bronchitis and Acute Exacerbations of Chronic Bronchitis, caused by *S pneumoniae* and *H influenzae* (beta-lactamase positive and negative strains).

Uncomplicated Gonorrhea (Cervical/Urethral), caused by *Neisseria gonorrhoeae* (penicillinase- and nonpenicillinase-producing strains).

Appropriate cultures and susceptibility studies should be performed to determine the causative organism and its susceptibility to SUPRAX; however, therapy may be started while awaiting the results of these studies. Therapy should be adjusted, if necessary, once these results are known.

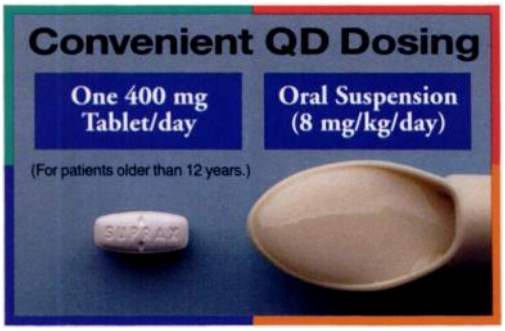
*Efficacy for this organism in this organ system was studied in fewer than 10 infections.

CLINICAL STUDIES

In clinical trials of otitis media in nearly 400 children between the ages of 6 months to 10 years, *S pneumoniae* was isolated from 47% of the patients, *H influenzae* from 34%, *M (B) catarrhalis* from 15%, and *S pyogenes* from 4%.

The overall response rate of *S pneumoniae* to cefixime was approximately 10% lower and that of *H influenzae* or *M (B) catarrhalis* approximately 7% higher (12% when beta-lactamase positive strains of *H influenzae* are included) than the response rates of these organisms to the active control drugs.

In these studies, patients were randomized and treated with either cefixime at dose regimens of 4 mg/kg BID or 8 mg/kg QD, or with a standard antibiotic regimen. Sixty-nine percent to 70% of the patients in each group had resolution of signs and symptoms of otitis media when evaluated 2 to 4 weeks posttreatment, but persistent effusion was found in 15% of the patients. When evaluated at the completion of therapy, 17% of patients receiving cefixime and 14% of patients receiving effective comparative drugs (18% including those patients who had *H influenzae* resistant to the control drug and who received the control antibiotic) were considered to be treatment failures. By the 2- to 4-week follow-up, a total of 30% to 31% of patients had evidence of either treatment failure or recurrent disease.



Bacteriological Outcome of Otitis Media at 2 to 4 Weeks Posttherapy
Based on Repeat Middle Ear Fluid Culture or
Extrapolation from Clinical Outcome

Organism	Cefixime[a][b] 4 mg/kg BID	Cefixime[a][b] 8 mg/kg QD	Control[a][b] drugs
Streptococcus pneumoniae	48/70 (69%)	18/22 (82%)	82/100 (82%)
Haemophilus influenzae beta-lactamase negative	24/34 (71%)	13/17 (76%)	23/34 (68%)
Haemophilus influenzae beta-lactamase positive	17/22 (77%)	9/12 (75%)	1/1[b]
Moraxella (Branhamella) catarrhalis	26/31 (84%)	5/5	18/24 (75%)
S pyogenes	5/5	3/3	6/7
All Isolates	120/162 (74%)	48/59 (81%)	130/166 (78%)

[a] Number eradicated/number isolated.

[b] An additional 20 beta-lactamase positive strains of *H influenzae* were isolated, but were excluded from this analysis because they were resistant to the control antibiotic. In 19 of these, the clinical course could be assessed, and a favorable outcome occurred in 10. When these cases are included in the overall bacteriological evaluation of therapy with the control drugs, 140/185 (76%) of pathogens were considered to be eradicated.

Tablets should not be substituted for suspension when treating otitis media.

CONTRAINDICATIONS

SUPRAX is contraindicated in patients with known allergy to the cephalosporin group of antibiotics.

WARNINGS

BEFORE THERAPY WITH SUPRAX IS INSTITUTED, CAREFUL INQUIRY SHOULD BE MADE TO DETERMINE WHETHER THE PATIENT HAS HAD PREVIOUS HYPERSENSITIVITY REACTIONS TO CEPHALOSPORINS, PENICILLINS, OR OTHER DRUGS. IF THIS PRODUCT IS TO BE GIVEN TO PENICILLIN-SENSITIVE PATIENTS, CAUTION SHOULD BE EXERCISED BECAUSE CROSS HYPERSENSITIVITY AMONG BETA-LACTAM ANTIBIOTICS HAS BEEN CLEARLY DOCUMENTED AND MAY OCCUR IN UP TO 10% OF PATIENTS WITH A HISTORY OF PENICILLIN ALLERGY. IF AN ALLERGIC REACTION TO SUPRAX OCCURS, DISCONTINUE THE DRUG. SERIOUS ACUTE HYPERSENSITIVITY REACTIONS MAY

REQUIRE TREATMENT WITH EPINEPHRINE AND OTHER EMERGENCY MEASURES, INCLUDING OXYGEN, INTRAVENOUS FLUIDS, INTRAVENOUS ANTIHISTAMINES, CORTICOSTEROIDS, PRESSOR AMINES, AND AIRWAY MANAGEMENT, AS CLINICALLY INDICATED.

Administer cautiously to allergic patients.

Treatment with broad-spectrum antibiotics, including SUPRAX, alters the normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is a primary cause of severe antibiotic-associated diarrhea including pseudomembranous colitis.

Pseudomembranous colitis has been reported with the use of SUPRAX and other broad-spectrum antibiotics (including macrolides, semisynthetic penicillins, and cephalosporins); therefore, it is important to consider this diagnosis in patients who develop diarrhea in association with the use of antibiotics. Symptoms of pseudomembranous colitis may occur during or after antibiotic treatment and may range in severity from mild to life-threatening. Mild cases of pseudomembranous colitis usually respond to drug discontinuation alone. In moderate to severe cases, management should include fluids, electrolytes, and protein supplementation. If the colitis does not improve after the drug has been discontinued, or if the symptoms are severe, oral vancomycin is the drug of choice for antibiotic-associated pseudomembranous colitis produced by *C difficile*. Other causes of colitis should be excluded.

PRECAUTIONS

General: Use, especially when prolonged, may result in overgrowth of resistant organisms. If superinfection occurs during therapy, take appropriate measures.

Carefully monitor patients on dialysis. Adjust dosage of SUPRAX in patients with renal impairment and those undergoing continuous ambulatory peritoneal dialysis and hemodialysis. (See **DOSAGE AND ADMINISTRATION** in package insert.)

Prescribe cautiously in patients with a history of gastrointestinal disease, particularly colitis.

Drug Interactions: No significant drug interactions have been reported to date.

Drug/Laboratory Test Interactions: A false-positive reaction for ketones in the urine may occur with tests using nitroprusside but not with those using nitroferricyanide.

SUPRAX administration may result in a false-positive reaction for glucose in the urine using Clinitest®,** Benedict's solution, or Fehling's solution. Use glucose tests based on enzymatic glucose oxidase reactions (such as Clinistix®** or Tes-Tape®**).

A false-positive direct Coombs test has been reported during treatment with other cephalosporin antibiotics; therefore, it should be recognized that a positive Coombs test may be due to the drug.

Carcinogenesis, Mutagenesis, Impairment of Fertility: Although no lifetime animal studies have been conducted to evaluate carcinogenic potential, no mutagenic potential of SUPRAX was found in standard laboratory tests. In rats, reproductive studies revealed no fertility impairment at doses up to 125 times the adult therapeutic dose.

Usage in Pregnancy: *Pregnancy Category B*: Reproduction studies have been performed in mice and rats at doses up to 400 times the human dose and have revealed no evidence of harm to the fetus due to SUPRAX. There are no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Labor and Delivery: SUPRAX has not been studied for use during labor and delivery. Treatment should only be given if clearly needed.

Nursing Mothers: It is not known whether SUPRAX is excreted in human milk. Consider discontinuing nursing temporarily during treatment with this drug.

Pediatric Use: Safety and effectiveness of SUPRAX in children aged less than 6 months have not been established.

The incidence of gastrointestinal adverse reactions, including diarrhea and loose stools, in pediatric patients receiving the suspension was comparable to that seen in adult patients receiving tablets.

ADVERSE REACTIONS

Most adverse reactions observed in clinical trials were of a mild and transient nature. Five percent (5%) of patients in the US trials discontinued therapy because of drug-related adverse reactions. The most commonly seen adverse reactions in US trials of the tablet formulation were gastrointestinal events, which were reported in 30% of adult patients on either the BID or the QD regimen. Clinically mild gastrointestinal side effects occurred in 20% of all patients, moderate events occurred in 9% of all patients, and severe adverse reactions occurred in 2% of all patients. Individual event rates included diarrhea 16%, loose or frequent stools 6%, abdominal pain 3%, nausea 7%, dyspepsia 3%, and flatulence 4%. The incidence of gastrointestinal adverse reactions, including diarrhea and loose stools, in pediatric patients receiving the suspension was comparable to that seen in adult patients receiving tablets.

These symptoms usually responded to symptomatic therapy or ceased when SUPRAX was discontinued.

Several patients developed severe diarrhea and/or documented pseudomembranous colitis, and a few required hospitalization.

The following adverse reactions have been reported following the use of SUPRAX. Incidence rates were less than 1 in 50 (less than 2%), except as noted above for gastrointestinal events.

Gastrointestinal: Diarrhea, loose stools, abdominal pain, dyspepsia, nausea, and vomiting. Several cases of documented pseudomembranous colitis were identified during the studies. The onset of pseudomembranous colitis symptoms may occur during or after therapy.

Hypersensitivity Reactions: Skin rashes, urticaria, drug fever, and pruritus. Erythema multiforme, Stevens-Johnson syndrome, and serum sickness-like reactions have been reported.

Hepatic: Transient elevations in SGPT, SGOT, and alkaline phosphatase.

Renal: Transient elevations in BUN or creatinine.

Central Nervous System: Headaches or dizziness.

Hemic and Lymphatic Systems: Transient thrombocytopenia, leukopenia, and eosinophilia. Prolongation in prothrombin time was seen rarely.

Other: Genital pruritus, vaginitis, candidiasis.

The following adverse reactions and altered laboratory tests have been reported for cephalosporin-class antibiotics:

Adverse Reactions: Allergic reactions including anaphylaxis, toxic epidermal necrolysis, superinfection, renal dysfunction, toxic nephropathy, hepatic dysfunction including cholestasis, aplastic anemia, hemolytic anemia, hemorrhage, and colitis.

Several cephalosporins have been implicated in triggering seizures, particularly in patients with renal impairment when the dosage was not reduced (see **DOSAGE AND ADMINISTRATION** and **OVERDOSAGE**). If seizures associated with drug therapy occur, discontinue drug. Administer anticonvulsant therapy if clinically indicated.

Abnormal Laboratory Tests: Positive direct Coombs test, elevated bilirubin, elevated LDH, pancytopenia, neutropenia, agranulocytosis.

OVERDOSAGE

Gastric lavage may be indicated; otherwise, no specific antidote exists. Cefixime is not removed in significant quantities from the circulation by hemodialysis or peritoneal dialysis. Adverse reactions in small numbers of healthy adult volunteers receiving single doses up to 2 g of SUPRAX did not differ from the profile seen in patients treated at the recommended doses.

AUSTRALIAN COURT DECISION ON PASSIVE SMOKING UPHELD ON APPEAL

. . .the Christmas of 1992 may be remembered by the Australian tobacco industry as one of its bleakest ever. On 17 December its officials awoke to radio bulletins announcing that a bill to ban all remaining forms of tobacco advertising had, in the small hours, finally passed through both houses of the federal parliament with the support of all parties. Tobacco advertising through sponsorship and billboards had been waiting like the last prisoners on death row for eight months following a cabinet announcement in April 1992 that the end of their last ditch stand was nigh . . .

. . .the tobacco industry is unrivalled at making silk purses from sows' ears. It still maintains with blithe equanimity its opinion that active smoking, let alone passive smoking, does not cause disease—it has been shown only to have a "statistical association," much in the same way that sexual intercourse might be denied to "cause" pregnancy.

Chapman S, Woodward S. Australian court decision on passive smoking upheld on appeal. *Br Med J.* 1993;306:120–122.

CANADIAN DRUG PRICES

Canadian experience shows that a drug-price review board can restrain prescription drug prices . . . Relative to U.S. drug prices, the Canadian prices subject to board review, were on average one-third lower than had there been no board.

Hilts PJ. Canada is found to lead U.S. in holding drug prices down. *The New York Times.* February 22, 1993.

Submitted by Student

For Patients With Asthma

Twice-Daily

Serevent®

(salmeterol xinafoate)

Inhalation Aerosol

Morning and Evening Inhalation for Active Days and Restful Nights

SEREVENT is indicated for maintenance treatment of asthma and prevention of bronchospasm in patients 12 years of age and older with reversible obstructive airway disease, including patients with symptoms of nocturnal asthma, who require regular treatment with inhaled, short-acting β_2-agonists.

Dosing should be two puffs (42 µg) of SEREVENT Inhalation Aerosol, twice daily, morning and evening, approximately 12 hours apart.

***IMPORTANT:** SEREVENT should not be used to relieve acute asthma symptoms.*

The most common drug-related adverse events reported in clinical trials were headache (10%), tremor (3%), and cough (3%).[1]

Please consult Brief Summary of Prescribing Information on adjacent pages.

Serevent®
(salmeterol xinafoate)
Inhalation Aerosol

BRIEF SUMMARY

Bronchodilator Aerosol
For Oral Inhalation Only

The following is a brief summary only. Before prescribing, see complete prescribing information in Serevent® Inhalation Aerosol product labeling.

CONTRAINDICATIONS: Serevent® Inhalation Aerosol is contraindicated in patients with a history of hypersensitivity to any of the components.

WARNINGS: 1. Not for Use to Treat Acute Symptoms; Watch for Increased Need for Short-Acting $Beta_2$-Agonists: Serevent® Inhalation Aerosol should not be used to relieve acute asthma symptoms. If the patient's short-acting, inhaled $beta_2$-agonist becomes less effective, e.g., the patient needs more inhalations than usual, medical evaluation must be obtained immediately and increasing use of Serevent Inhalation Aerosol in this situation is inappropriate. Serevent Inhalation Aerosol should not be used more frequently than twice daily (morning and evening) at the recommended dose. When prescribing Serevent Inhalation Aerosol, patients must be provided with a short-acting, inhaled $beta_2$-agonist (e.g., albuterol) for treatment of symptoms that occur despite regular twice-daily (morning and evening) use of Serevent.

Asthma may deteriorate acutely over a period of hours or chronically over several days. In this setting, increased use of inhaled, short-acting $beta_2$-agonists is a marker of destabilization of asthma and requires re-evaluation of the patient and consideration of alternative treatment regimens, especially inhaled or systemic corticosteroids. If the patient uses four or more inhalations per day of a short-acting $beta_2$-agonist on a regular basis, or if more than one canister (200 inhalations per canister) is used in an 8-week period, then the patient should see the physician for re-evaluation of treatment.

2. Use With Short-Acting $Beta_2$-Agonists: When patients begin treatment with Serevent Inhalation Aerosol, those who have been taking short-acting, inhaled $beta_2$-agonists on a regular daily basis should be advised to discontinue their regular daily-dosing regimen and should be clearly instructed to use short-acting, inhaled $beta_2$-agonists only for symptomatic relief if they develop asthma symptoms while taking Serevent Inhalation Aerosol (see PRECAUTIONS: Drug Interactions).

3. Serevent Inhalation Aerosol Is Not a Substitute for Oral or Inhaled Corticosteroids: Patients must be warned not to stop or reduce corticosteroid therapy without medical advice, even if they feel better when they are being treated with Serevent.

4. Do Not Exceed Recommended Dose: As with other beta-adrenergic aerosols, Serevent Inhalation Aerosol should not be used in excess. Fatalities have been reported in association with excessive use of inhaled sympathomimetic drugs. Large doses of inhaled or oral salmeterol (12 to 20 times the recommended dose) have been associated with clinically significant prolongation of the QT_C interval, which has the potential for producing ventricular arrhythmias.

5. Paradoxical Bronchospasm: As with other inhaled asthma medications, paradoxical bronchospasm (which can be life-threatening) has been reported following the use of Serevent Inhalation Aerosol. If it occurs, treatment with Serevent Inhalation Aerosol should be discontinued immediately and alternative therapy instituted.

6. Immediate Hypersensitivity Reactions: Immediate hypersensitivity reactions may occur after administration of Serevent Inhalation Aerosol, as demonstrated by rare cases of urticaria, angioedema, rash, and bronchospasm.

PRECAUTIONS:

General: 1. Use with Spacer or Other Devices: The safety and effectiveness of Serevent® Inhalation Aerosol when used with a spacer or other devices have not been adequately studied.

2. Cardiovascular and Other Effects: No effect on the cardiovascular system is usually seen after the administration of inhaled salmeterol in recommended doses, but the cardiovascular and central nervous system effects seen with all sympathomimetic drugs (e.g., increased blood pressure, heart rate, excitement) can occur after use of Serevent Inhalation Aerosol and may require discontinuation of the drug. Salmeterol, like all sympathomimetic amines, should be used with caution in patients with cardiovascular disorders, especially coronary insufficiency, cardiac arrhythmias, and hypertension; in patients with convulsive disorders or thyrotoxicosis; and in patients who are unusually responsive to sympathomimetic amines.

As has been described with other beta-adrenergic agonist bronchodilators, clinically significant changes in systolic and/or diastolic blood pressure, pulse rate, and electrocardiograms have been seen infrequently in individual patients in controlled clinical studies with salmeterol.

3. Metabolic Effects: Doses of the related $beta_2$-adrenoceptor agonist albuterol, when administered intravenously, have been reported to aggravate pre-existing diabetes mellitus and ketoacidosis. No effects on glucose have been seen with Serevent Inhalation Aerosol at recommended doses. Administration of $beta_2$-adrenoceptor agonists may cause a decrease in serum potassium, possibly through intracellular shunting, which has the potential to increase the likelihood of arrhythmias. The decrease is usually transient, not requiring supplementation.

Clinically significant changes in blood glucose and/or serum potassium were seen rarely during clinical studies with long-term administration of Serevent Inhalation Aerosol at recommended doses.

Information for Patients: See illustrated Patient's Instructions for Use. **SHAKE WELL BEFORE USING.** Patients should be given the following information:

1. Not for Use to Treat Acute Symptoms: Serevent Inhalation Aerosol is not meant to relieve acute asthmatic symptoms. Acute symptoms should be treated with an inhaled, short-acting bronchodilator that has been prescribed by a physician for symptom relief.

2. Do Not Exceed Recommended Dose: The bronchodilator action of salmeterol usually lasts for at least 12 hours. Therefore it should not be used more often than every 12 hours.

3. Use with Other Medications: While using Serevent Inhalation Aerosol, other inhaled medicines should be taken only as directed by the physician.

4. Use with Short-Acting, Inhaled Beta-Agonists: While using Serevent Inhalation Aerosol, medical attention should be sought immediately if the short-acting bronchodilator treatment becomes less effective for symptom relief, if more inhalations than usual are needed, or if more than the maximum number of inhalations of short-acting bronchodilator treatment prescribed for a 24-hour period are needed. If the patient uses four or more inhalations per day of a short-acting $beta_2$-agonist on a regular basis, or if more than one canister (200 inhalations per canister) is used in an 8-week period, then the patient should see the physician for re-evaluation of treatment.

Patients should be cautioned regarding potential adverse cardiovascular effects, such as palpitations or chest pain, related to the use of additional $beta_2$-agonist.

5. Use of Systemic or Inhaled Steroids: Serevent Inhalation Aerosol does not replace oral or inhaled corticosteroids; the dosage of these medicines should not be changed and they should not be stopped without consulting the physician, even if the patient feels better.

6. Use for Exercise-Induced Bronchospasm: When using Serevent Inhalation Aerosol to prevent exercise-induced bronchospasm, the dose should be administered at least 30 to 60 minutes before exercise.

Drug Interactions: ***Short-Acting Beta-Agonists:*** In the two 3-month, repetitive-dose clinical trials (n=184), the mean daily need for additional $beta_2$-agonist use was 1 to 1½ inhalations per day, but some patients used more. Eight percent of patients used at least eight inhalations per day at least on one occasion. Six percent used 9 to 12 inhalations at least once. There were 15 patients (8%) who averaged over four inhalations per day. Four of these used an average of 8 to 11 inhalations per day. In these 15 patients there was no observed increase in frequency of cardiovascular adverse events. The safety of concomitant use of more than eight inhalations per day of short-acting $beta_2$-agonists with Serevent® (salmeterol xinafoate) Inhalation Aerosol has not been established. In 15 patients who experienced worsening of asthma while receiving Serevent Inhalation Aerosol, nebulized albuterol (one dose in most) led to improvement in FEV_1 and no increase in occurrence of cardiovascular adverse events.

Monoamine Oxidase Inhibitors and Tricyclic Antidepressants: Salmeterol should be administered with extreme caution to patients being treated with monoamine oxidase inhibitors or tricyclic antidepressants because the action of salmeterol on the vascular system may be potentiated by these agents.

Corticosteroids and Cromoglycate: In clinical trials, inhaled corticosteroids and/or inhaled cromolyn sodium did not alter the safety profile of Serevent Inhalation Aerosol when administered concurrently.

Methylxanthines: The concurrent use of intravenously or orally administered methylxanthines (e.g., aminophylline, theophylline) by patients receiving Serevent Inhalation Aerosol has not been completely evaluated. In one clinical trial, 87 patients receiving Serevent Inhalation Aerosol 42 mcg twice daily concurrently with a theophylline product had adverse event rates similar to those in 71 patients receiving Serevent Inhalation Aerosol without theophylline. Resting heart rates were slightly higher in the patients on theophylline but were little affected by Serevent Inhalation Aerosol therapy.

Carcinogenesis, Mutagenesis, Impairment of Fertility: In an 18-month oral carcinogenicity study in CD-mice, salmeterol xinafoate caused a dose-related increase in the incidence of smooth muscle hyperplasia, cystic glandular hyperplasia, and leiomyomas of the uterus and a dose-related increase in the incidence of cysts in the ovaries. A higher incidence of leiomyosarcomas was not statistically significant; tumor findings were observed at oral doses of 1.4 and 10 mg/kg, which gave 9 and 63 times, respectively, the human exposure based on rodent:human AUC comparisons.

Salmeterol caused a dose-related increase in the incidence of mesovarian leiomyomas and ovarian cysts in Sprague Dawley rats in a 24-month inhalation/oral carcinogenicity study. Tumors were observed in rats receiving doses of 0.68 and 2.58 mg/kg per day (about 55 and 215 times the recommended clinical dose [mg/m^2]). These findings in rodents are similar to those reported previously for other beta-adrenergic agonist drugs. The relevance of these findings to human use is unknown.

No significant effects occurred in mice at 0.2 mg/kg (1.3 times the recommended clinical dose based on comparisons of the AUCs) and in rats at 0.21 mg/kg (15 times the recommended clinical dose on a mg/m^2 basis).

Salmeterol xinafoate produced no detectable or reproducible increases in microbial and mammalian gene mutation *in vitro*. No blastogenic activity occurred *in vitro* in human lymphocytes or *in vivo* in a rat micronucleus test. No effects on fertility were identified in male and female rats treated orally with salmeterol xinafoate at doses up to 2 mg/kg orally (about 160 times the recommended clinical dose on a mg/m^2 basis).

Pregnancy: ***Teratogenic Effects: Pregnancy Category C:*** No significant effects of maternal exposure to oral salmeterol xinafoate occurred in the rat at doses up to the equivalent of about 160 times the recommended clinical dose on a mg/m^2 basis. Dutch rabbit fetuses exposed to salmeterol xinafoate *in utero* exhibited effects characteristically resulting from beta-adrenoceptor stimulation; these included precocious eyelid openings, cleft palate, sternebral fusion, limb and paw flexures, and delayed ossification of the frontal cranial bones. No significant effects occurred at 0.6 mg/kg given orally (12 times the recommended clinical dose based on comparison of the AUCs).

New Zealand White rabbits were less sensitive since only delayed ossification of the frontal bones was seen at 10 mg/kg given orally (approximately 1,600 times the recommended clinical dose on a mg/m^2 basis). Extensive use of other beta-agonists has provided no evidence that these class effects in animals are relevant to use in humans. There are no adequate and well-controlled studies with Serevent Inhalation Aerosol in pregnant women. Serevent Inhalation Aerosol should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Use in Labor and Delivery: There are no well-controlled human studies that have investigated effects of salmeterol on preterm labor or labor at term. Because of the potential for beta-agonist interference with uterine contractility, use of Serevent Inhalation Aerosol during labor should be restricted to those patients in whom the benefits clearly outweigh the risks.

Nursing Mothers: Plasma levels of salmeterol after inhaled therapeutic doses are very low (85 to 200 pg/mL) in humans. In lactating rats dosed with radiolabeled salmeterol, levels of radioactivity were similar in plasma and milk. In rats, concentrations of salmeterol in plasma and milk were similar. The xinafoate moiety is also transferred to milk in rats at concentrations of about half the corresponding level in plasma. However, since there is no experience with use of Serevent Inhalation Aerosol by nursing mothers, a decision should be made whether to discontinue nursing or to discontinue the drug, taking into account the importance of the drug to the mother. Caution should be exercised when salmeterol xinafoate is administered to a nursing woman.

Pediatric Use: The safety and effectiveness of Serevent Inhalation Aerosol in children younger than 12 years of age have not been established.

Geriatric Use: Of the total number of patients who received Serevent Inhalation Aerosol in all clinical studies, 241 were 65 years and older. Geriatric patients (65 years and older) with reversible obstructive airway disease were evaluated in four well-controlled studies of 3 weeks' to 3 months' duration. Two placebo-controlled, crossover studies evaluated twice-daily dosing with salmeterol for 21 to 28 days in 45 patients. An additional 75 geriatric patients were treated with salmeterol for 3 months in two large parallel-group, multicenter studies. These 120 patients experienced increases in AM and PM peak expiratory flow rate and decreases in diurnal variation in peak expiratory flow rate similar to responses seen in the total populations of the two latter studies. The adverse event type and frequency in geriatric patients were not different from those of the total populations studied.

No apparent differences in the efficacy and safety of Serevent Inhalation Aerosol were observed when geriatric patients were compared with younger patients in clinical trials. As with other $beta_2$-agonists, however, special caution should be observed when using Serevent Inhalation Aerosol in elderly patients who have concomitant cardiovascular disease that could be adversely affected by this class of drug. Based on available data, no adjustment of salmeterol dosage in geriatric patients is warranted.

ADVERSE REACTIONS: Adverse reactions to salmeterol are similar in nature to reactions to other selective $beta_2$-adrenoceptor agonists, i.e., tachycardia; palpitations; immediate hypersensitivity reactions, including urticaria, angioedema, rash, bronchospasm (see WARNINGS); headache; tremor; nervousness; and paradoxical bronchospasm (see WARNINGS).

Two multicenter, 12-week, controlled studies have evaluated twice-daily doses of Serevent® Inhalation Aerosol in patients 12 years of age and older with asthma. The following table reports the incidence of adverse events in these two studies.

Serevent® (salmeterol xinafoate) Inhalation Aerosol

Adverse Experience Incidence in Two Large 12-Week Clinical Trials*

Adverse Event Type	Percent of Patients		
	Placebo n=187	Serevent 42 mcg b.i.d. n=184	Albuterol 180 mcg q.i.d. n=185
Ear, nose, and throat			
Upper respiratory tract infection	13	14	16*
Nasopharyngitis	12	14	11
Disease of nasal cavity/sinus	4	6	1
Sinus headache	2	4	<1
Gastrointestinal			
Stomachache	0	4	0
Neurological			
Headache	23	28	27
Tremor	2	4	3
Respiratory			
Cough	6	7	3
Lower respiratory infection	2	4	2

* The only adverse experience classified as serious was one case of upper respiratory tract infection in a patient treated with albuterol.

The table above includes all events (whether considered drug related or nondrug related by the investigator) that occurred at a rate of over 3% in the Serevent® (salmeterol xinafoate) Inhalation Aerosol treatment group and were more common in the Serevent Inhalation Aerosol group than in the placebo group.

Pharyngitis, allergic rhinitis, dizziness/giddiness, and influenza occurred at 3% or more but were equally common on placebo. Other events occurring in the Serevent Inhalation Aerosol treatment group at a frequency of 1% to 3% were as follows:

Cardiovascular: Tachycardia, palpitations.
Ear, Nose, and Throat: Rhinitis, laryngitis.
Gastrointestinal: Nausea, viral gastroenteritis, nausea and vomiting, diarrhea, abdominal pain.
Hypersensitivity: Urticaria.
Mouth and Teeth: Dental pain.
Musculoskeletal: Pain in joint, back pain, muscle cramp/contraction, myalgia/myositis, muscular soreness.
Neurological: Nervousness, malaise/fatigue.
Respiratory: Tracheitis/bronchitis.
Skin: Rash/skin eruption.
Urogenital: Dysmenorrhea.

In small dose-response studies, tremor, nervousness, and palpitations appeared to be dose related.

OVERDOSAGE: Overdosage with salmeterol may be expected to result in exaggeration of the pharmacologic adverse effects associated with beta-adrenoceptor agonists, including tachycardia and/or arrhythmia, tremor, headache, and muscle cramps. Overdosage with salmeterol can lead to clinically significant prolongation of the QT_C interval, which can produce ventricular arrhythmias. Other signs of overdosage may include hypokalemia and hyperglycemia.

In these cases, therapy with Serevent® Inhalation Aerosol and all beta-adrenergic–stimulant drugs should be stopped, supportive therapy provided, and judicious use of a beta-adrenergic blocking agent should be considered, bearing in mind the possibility that such agents can produce bronchospasm. Cardiac monitoring is recommended in cases of overdosage.

As with all sympathomimetic pressurized aerosol medications, cardiac arrest and even death may be associated with abuse of Serevent Inhalation Aerosol.

Rats and dogs survived the maximum practicable inhalation doses of salmeterol of 2.9 and 0.7 mg/kg, respectively. The maximum nonlethal oral doses in mice and rats were approximately 150 mg/kg and >1,000 mg/kg, respectively.

Dialysis is not appropriate treatment for overdosage of Serevent Inhalation Aerosol.

Now there's a safe, pleasant-tasting choice for cough and cold sufferers who don't need the added ingredients in many OTC medicines. With the strength of 10 mg dextromethorphan hydrobromide, 5 mg phenylephrine hydrochloride, and 8.33 mg pyrilamine maleate per 5 mL teaspoonful, Codimal® DM represents a new concept in cough suppressant, nasal decongestant and antihistamine therapy.

It's true. Because "muscular dystrophy" is the term for a *group* of twelve diseases—and no one disorder goes by that name.

Other facts about muscular dystrophy might surprise you, too. For one thing, the diseases aren't restricted to children. Anyone can be stricken, at any time.

For another thing, the Muscular Dystrophy Association battles not just the twelve muscular dystrophies, but twenty-eight other neuromuscular diseases, too.

At MDA, we're striving to put an end to all the devastating disorders you used to think of as muscular dystrophy.

And one day—we're determined—this chair will be empty for real.

MDA
Muscular Dystrophy Association

THE UNIVERSITY OF VERMONT COLLEGE OF MEDICINE seeks a specialist in both adult and pediatric infectious disease for a full-time faculty position at the Assistant/Associate Professor level. We seek a Board certified or eligible individual with training in both pediatric and adult infectious disease to carry a joint appointment in the Departments of Medicine and Pediatrics. The individual will have clinical and teaching responsibilities in both adult and pediatric infectious disease, and will be active in clinical research. Please send resumes to: Christopher Grace, MD, Dept of Medicine, Brown 338, Medical Center Hospital of Vermont, Colchester Ave, Burlington, VT 05401. The University of Vermont is an Affirmative Action/Equal Opportunity Employer. Applications from women and people of diverse racial, ethnic, and cultural backgrounds are encouraged. The position will be open until filled.

THE MEDICAL CENTER OF CENTRAL MASSACHUSETTS

The Medical Center of Central Massachusetts is a 450-bed referral center for central Massachusetts and an affiliated hospital of the University of Massachusetts Medical School.

Pediatrician

Pediatric Primary Care

We are seeking two Board-certified/eligible pediatricians to establish two community-based clinical practices in southern and central Worcester County as part of our expanding ambulatory pediatric primary care service. Other responsibilities may include providing clinical instruction and supervision to medical students and residents in family medicine. Credentials must be suitable for appointment in the Department of Pediatrics of UMASS Medical School. Training in developmental pediatrics would be highly desirable.

Excellent lifestyle, competitive salary and benefits. Please send CV to: **J. Barry Hanshaw, M.D., Chairman, Dept. of Pediatrics, The Medical Center of Central Massachusetts, 119 Belmont Street, Worcester, MA 01605-2982.** An Equal Opportunity Employer.

GENERAL PEDIATRICIAN/NATIONAL CAPITAL AREA—Exciting and unique opportunity for general pediatricians in innovative clinical practice in suburban small group practices linked with a university affiliated HMO. Share call with other centers; full benefits, including faculty appointment and tuition benefits in department which combines community and preventative medicine with primary care service delivery. Applications will be accepted and reviewed on an ongoing basis until each vacancy in this academic year is filled. Send CV and cover letter indicating position number HCS94-06S to: Debbie Eiland, Faculty Recruitment Assistant, Dept of Health Care Sciences, Rm 2B-417, 2150 Pennsylvania Ave, NW, Washington, DC 20037. The George Washington University is an Equal Opportunity Employer.

□

PRIMARY CARE PEDIATRICS/WASHINGTON, DC—Exciting and unique opportunity for primary care pediatricians with interest in clinical practice and teaching to join a large, innovative primary care department which links research and education in health services, ethics, and public health with community oriented primary care. Large, diverse patient population. Established faculty development and strong research support programs. Applications will be accepted and reviewed on an ongoing basis until each vacancy in this academic year is filled. Send cover letter indicating position number HCS94-06D and CV to: Debbie Eiland, Faculty Recruitment Assistant, Dept of Health Care Sciences, Rm 2B-417, 2150 Pennsylvania Ave, NW, Washington, DC 20037. The George Washington University is an Equal Opportunity Employer.

BC/BE NEONATOLOGISTS—Pediatrix Medical Group, the nation's largest private neonatology practice, provides a stable income, career advancement, and research opportunities. These are just some of the reasons to consider one of our permanent positions available in New York State: Watertown–Picturesque Watertown . . . a mecca for year-round sports enthusiasts; summer sailing on beautiful lakes; world class snow skiing; and a myriad of leisure time options in any season! All that, plus excellent housing choices, fine schools and friendly people await you! Just join our private practice group in Watertown (70 miles north of Syracuse) at a 319-bed regional referral center, with a six-bed Level II NICU. Utica–Be part of our growing, private practice at St Luke's Memorial Hospital. St Luke's has a sophisticated, 10-bed Level II NICU and offers an excellent environment for professional growth. Plus, Utica is a city of many facets: upscale arts, entertainment, shopping, and dining; all surrounded by beautiful countryside to explore and enjoy. For additional information, please contact: Cindy Sowinski, Physician Relations, at 800-243-3839, Pediatrix Medical Group, 1455 Northpark Dr, Ft Lauderdale, FL 33326.

□

THE DEPARTMENT OF PEDIATRICS is seeking a BC/BE pediatric pulmonologist to be the Director of the Cystic Fibrosis Center at Polyclinic Medical Center. The Cystic Fibrosis Center is one of the six state funded and nationally accredited Cystic Fibrosis Centers in the Commonwealth of Pennsylvania. Polyclinic Medical Center is a 500-bed hospital with a combined pediatric residency training program with Hershey S. Medical Center, The Penn State University School of Medicine. It is a full-time position with clinical academic faculty appointment for the deserving candidate at the Penn State University School of Medicine. Salary negotiable and competitive. Contact: B.K. Varma, MD, Chairman, Dept of Pediatrics, 717-782-2388.

□

PENNSYLVANIA—Geisinger presently has opportunities for BC/BE pediatricians in its Wilkes-Barre, Lewistown, Philipsburg, and Tyrone locations. Geisinger is a health care system with two hospitals and 47 outpatient offices. Pediatricians will provide office and inpatient care. Tertiary care is available at Geisinger Medical Center in Danville, PA. Competitive salary and excellent benefits package. Interested individuals should forward their CV's to: Geisinger, Physician Recruitment PD-BU, 100 N Academy Ave, Danville, PA 17822-3024, or call 800-845-7112. Fax: 717-271-6988. EOE, M/F/H/V.

□

PENNSYLVANIA—Two-person, established, thriving practice seeks a FT, BC/BE associate. Affiliated with a progressive community hospital with a busy Level II Nursery. Send CV to: Hanover Pediatric Associates, 217 Broadway, Hanover, PA 17331.

MASSACHUSETTS—The Division of General Pediatrics at Boston City Hospital and Boston University School of Medicine is recruiting full-time Primary Care Providers and Health Service Researchers. There are 25,000 visits annually in the Primary Care Center. The Pediatric Primary Care Center serves an ethnically diverse population. There is a general academic fellowship supported by HRSA. Four fellows are currently in training. Send letters of interest and CV to: Howard Bauchner, MD, Director of the Division of General Pediatrics, Boston City Hospital, Talbot 103, 818 Harrison Ave, Boston, MA 02118. EOE.

□

NORTHEAST NEW JERSEY—Large, progressive, rapidly growing, Bergen County pediatric group is seeking BC/BE pediatrician. Competitive salary rapidly progressing to partnership. Reply to Box #019501.

□

NEW JERSEY—Third BC/BE pediatrician, FT preferred, for young, growing practice, 10 minutes from NYC. Salary leading to partnership. Reply with CV: Edward Zajkowski, MD, 197 Cedar Ln, Teaneck, NJ 07666.

□

ASSISTANT PROFESSOR OF CLINICAL PEDIATRICS—Emergency room physician. The Department of Pediatrics, University of Medicine and Dentistry of New Jersey-Robert Wood Johnson Medical School is seeking a Board certified or eligible pediatrician to join the faculty of the Division of General Pediatrics, Section of Pediatric Emergency Medicine. The successful candidate will provide patient care and teaching supervision of medical students and residents in the Emergency Departments of the Robert Wood Johnson University Hospital and St Peter's Medical Center, the major teaching affiliates of the medical school. Protected research time will be provided. Candidates with pediatric emergency room training or experience are preferred. Applications including CV should be sent to: Ernest Leva, MD, Co-Director, Section of Pediatric Emergency Medicine, Division of General Pediatrics, Dept of Pediatrics, UMDNJ-Robert Wood Johnson Medical School, One Robert Wood Johnson Place, CN-19, New Brunswick, NJ 08903-0019. UMDNJ, New Jersey's University of the Health Sciences is an Affirmative Action/Equal Opportunity Employer, M/F/D/V, and a member of the University Health System of New Jersey.

□

AGGRESSIVE, YOUNG PEDIATRICIAN on staff at two expanding community hospitals with Level II Nurseries, seeking associate. Generous benefits and incentives leading to early partnership. Beautiful shore community offers many amenities. Send CV to: 1749 Hooper Ave, #203, Toms River, NJ 08753.

□

MARYLAND/WASHINGTON, DC METROPOLITAN AREA—Pediatricians BC/BE needed for Montgomery County community hospital private practice, FT/PT. Paid benefits; flexible work schedule with no on-call. Send CV to: Robert Buczek, MD, 9901 Medical Center Dr, Rockville, MD 20850.

PEDIATRIC PULMONARY PHYSICIAN—The Department of Pediatrics at Maine Medical Center, a 550-bed tertiary care hospital and the major affiliate of the University of Vermont College of Medicine, is seeking a pediatric pulmonologist. The physician should be Board certified in pediatrics and Board eligible in pediatric pulmonology. A special interest in pulmonary intensive care is desirable. A long standing relationship has developed with the Pediatric Pulmonary Division at the Massachusetts General Hospital. Interested applicants should submit a CV to: Daniel C. Shannon, MD, Director of Pediatric Pulmonary Division, Maine Medical Center, 22 Bramhall St, Portland, ME 04102.

□

PEDIATRIC NEPHROLOGIST—The Department of Pediatrics at Maine Medical Center, a 550-bed tertiary care hospital and the major affiliate of the University of Vermont College of Medicine, is seeking a pediatric nephrologist. The physician should be Board certified in pediatrics and Board eligible in pediatric nephrology. Interested applicants should submit a CV to: Paul Stern, MD, Chairman, Dept of Pediatrics, Maine Medical Center, 22 Bramhall St, Portland, ME 04102.

□

PITTSBURGH, PENNSYLVANIA—America's most livable city–Mercy Children's Medical Center is recruiting a fourth neonatologist to join its neonatology division. The Mercy Children's Medical Center includes a pediatric residency program and core faculty in general and subspecialty pediatrics with a medical student affiliation with the University of Pittsburgh School of Medicine. Position includes patient care, teaching, and protected time for research. Reply in confidence, to: Bradley J. Bradford, MD, Chairman, Dept of Pediatrics, Mercy Children's Medical Center, 1400 Locust St, Pittsburgh, PA 15219.

□

BOARD CERTIFIED NEONATOLOGIST/BEAUTIFUL SOUTHEASTERN PENNSYLVANIA—Chief of Neonatology seeks associate for 18-bed, Level II+ NICU with 350 admissions. Large, university affiliated, community teaching hospital with 2,600 births; clinical emphasis, stimulating environment, nurse practitioner interaction. PEDIATRIC GENERALIST/SUBURBAN CHICAGO, ILLINOIS—An outstanding opportunity exists for a BC/BE generalist who wants to join a group of primary care physicians who are dedicated to quality service and patient care. HealthSpring Medical Group of Bloomingdale, a part of a nationally growing organization, provides a physician driven managed care atmosphere for physicians to develop one-to-one patient relationships, yet fully supports the physician's valued needs for personal time and healthy lifestyle activities. If you are interested in an excellent salary arrangement and outstanding compensation package, please call Jim Brous at: 800-638-6942 for more information.

□

GENERAL PEDIATRIC FACULTY—The University of Chicago Pritzker School of Medicine seeks qualified candidates for faculty to join the general pediatric section of the department of pediatrics. Applicants should be interested in direct patient care, medical student and housestaff education, and possibly clinical research. Assignment will be to the Children's Medical Group (an onsite academically oriented private practice) or to the Woodlawn Maternal and Child Health Center (inner city, community based primary care grogram located in the adjacent university area). Each of these sites have both student and resident rotations on a regular basis. A letter of inquiry including curriculum vitae should be sent to: Samuel H. Gould, MD, Associate Professor and Chief, Section of General Pediatrics, Wyler Children's Hospital, 5841 S Maryland Ave, MC 1057, Chicago, IL 60637. The University of Chicago is an Equal Opportunity/Affirmative Action Employer.

FULL TIME ACADEMIC POSITIONS FOR THE CLINICAL SCHOLAR

Critical Care
Pulmonology
Hematology/Oncology

The Department of Pediatrics of the University of South Dakota School of Medicine is seeking faculty to either begin new programs or add depth to existing ones. These are full-time academic positions which are ideally suited to the clinician/teacher who wishes to be instrumental in the development of new programs in the only academic pediatric medical facility in the region. We are particularly interested in faculty who are capable of developing warm and caring relationships with patients and their families and who enjoy working closely with referring physicians. Although our program is heavily slanted toward medical student education and patient care, excellent resources for clinical research are available and funded by the Department. This is a unique opportunity to get in on the ground floor for building programs which will have a major impact on the health care of children in our region.

Sioux Falls is a growing community of 105,000 people with a referral base of 600,000. The strength of its economy and family oriented quality of life have recently earned it national recognition as the number one city in which to live. Compensation is quite competitive and a comprehensive benefits package is offered. EOE/AAE

□

MICHIGAN—Hospital employed and private practice pediatric opportunities available in **FARMINGTON HILLS, BIRMINGHAM,** and **WATERFORD.** For further information, please fax a CV in confidence, to: Jim Lucas, Director of Physician Recruitment, 2075 W Big Beaver Rd, Ste 600, Troy, MI 48084. 810-649-2010; Fax: 810-649-5125.

BC/BE NEONATOLOGISTS—Get away TO it all . . . be near the bright lights, big city, enjoy the advantages of small town life! Join our team in Barrington, Illinois (35 miles from Chicago) at Good Shepherd Hospital, a 162-bed facility handling over 2,000 births/year. In their eight-bed, Level II NICU, permanent positions are available for a medical director and two associates. As the nation's largest neonatal private practice, we offer superior professional advantages, including outstanding compensation, full-featured benefits including malpractice insurance, and ongoing advancement potential. To find out more, contact: Lori Abolafia, Director, Physician Relations, at 800-243-3839, Pediatrix Medical Group, 1455 Northpark Dr, Ft Lauderdale, FL 33326.

□

BC/BE NEONATOLOGISTS—Combine big city excitement and small town charm in Grand Rapids, Michigan. Enjoy the security of a permanent position with a growing, private practice in one of our two openings in Grand Rapids, at St Mary's Hospital. A 310-bed acute care facility, with a well-established, Level II, sophisticated NICU, St Mary's offers an excellent environment for professional growth. As the nation's largest private neonatology practice, we offer excellent compensation and full featured benefits, including malpractice insurance. To find out more, call: Cindy Sowinski, Physician Relations at 800-243-3839. Pediatrix Medical Group, 1455 Northpark Dr, Ft Lauderdale, FL 33326.

IF THIS IS THE LIFESTYLE YOU ARE SEEKING . . .

- A progressive city that captures the ambiance of small town living and is close to many cultural amenities like theatre, concerts, and sporting events and is only two hours from Chicago.
- Quality education in private and public institutions at all levels with close proximity to University of Notre Dame and Goshen College.
- Recreational activities including numerous water sports, unique shopping opportunities associated with Amish culture, and festivals and fairs singular to rural communities.
- Diversity of programs sponsored by parks and recreation and educational institutions to engage young minds and spirits including gymnastics, music, academic competitions and team sports.
- One of two areas cited by American Demographics for strong manufacturing growth and housing affordability is in the top ten nationally.

AND THIS IS THE TYPE OF PRACTICE YOU ARE SEEKING . . .

- A growing population with a demand for a pediatrician to join three who are practicing in Goshen.
- Excellent call coverage with a young, diverse staff, which includes five obstetricians, providing a strong referral base and camaraderie.
- A hospital that delivers approximately 1,300 babies per year in a new state-of-the-art, 14-bed LDRP unit.
- A competitive salary, a new office complex and practice management support.

THEN GOSHEN IS WHAT YOU ARE SEEKING!

If interested, please call Rick Addis at Goshen General Hospital: 800-258-4321, or at home: 219-533-8311.

Goshen General Hospital
PO Box 139
Goshen, IN 46527-0139

BC/BE NEONATOLOGIST—There are plenty of good reasons to consider our permanent position available in Wichita: the cultural advantages of a sophisticated city, the beautiful, wide open spaces of the great midwest . . . an array of recreational options, affordable living, and a multitude of housing choices! When you add those personal advantages to the professional advantages available with our growing national private practice, you'll want to become part of our quality driven healthcare team! We have an immediate opening for the 3rd member of the neonatal team at Kansas' largest medical center, offering a full range of pediatric subspecialties, in its newly constructed, state-of-the-art, 15-bed Level III NICU. With us, you'll enjoy job and income security, growth opportunities, and full featured benefits including malpractice insurance and stock options. To find out more, contact: Cindy Sowinski, Physician Relations, 800-243-3839, Pediatrix Medical Group, 1455 Northpark Dr, Ft Lauderdale, FL 33326.

□

WISCONSIN—BC/BE pediatrician to join department of four general pediatricians in 48-physician multispecialty group located adjacent to a modern, progressive, 180-bed hospital. Excellent family environment, 90 miles from Chicago, in Southern Wisconsin college community of 50,000 plus with good proximity to a variety of cultural and lifestyle amenities. Guaranteed salary with incentive and excellent benefit package. Send CV: James Ruethling, Administrator, 1905 Huebbe Pkwy, Beloit, WI 53511. 608-364-2380.

PEDIATRICIANS, BC/BE WITH ILLINOIS/INDIANA LICENSES to share in coverage as in-house pediatric consultants at hospitals in the Chicago South and Western suburbs and in Northwest Indiana. Excellent salary; flexible hours. Call: 815-723-3524.

□

□

PEDIATRIC PULMONOLOGIST—The Regional Center for Children's Health at SwedishAmerican is currently looking for an ambitious pediatric pulmonologist to join the most progressive pediatric program in northern Illinois and southern Wisconsin. This position will complement the other pediatric subspecialists currently providing care in allergy, apnea, cardiology, critical care, gastroenterology, hematology/oncology, and neurology. SwedishAmerican is located in Rockford; Illinois' second largest city, just 90 miles west of Chicago and 80 miles southwest of Milwaukee. Rockford's excellent location allows easy access to the advantages of these large metropolitan areas, as well as to Wisconsin's vast system of scenic parks and lakes. The patient service population includes more than 850,000 people in a 16-county region and currently does not have a pediatric pulmonologist serving this region. This is an excellent opportunity for a highly motivated person who would enjoy developing and leading a pediatric pulmonology program. This position involves a clinical inpatient and outpatient practice, outreach clinics, and involvement in regional education. SwedishAmerican Hospital is the designated teaching site for the University of Illinois College of Medicine at Rockford (UICOM/R) which provides an opportunity for teaching medical students and family practice residents. There are also opportunities available for clinical research, in conjunction with the UICOM/R. We are offering an attractive compensation package, designed to meet your needs. This package includes a highly competitive salary, a comprehensive benefit program of life, disability, and health insurance for you and your family, office and practice management, retirement plan, malpractice coverage, vacation time, and CME appropriations. For more information, contact: Rynn Johnson, Physician Resource Center, SwedishAmerican Health System, 1400 Charles St, Rockford, IL 61104. 815-961-2433. Fax: 815-966-3975.

□

VALLEY CHILDREN'S HOSPITAL IN FRESNO, CALIFORNIA has an immediate opening for a pediatric emergency specialist to join a private practice partnership. Valley Children's Hospital is a pediatrics-only, tertiary referral center between San Francisco and Los Angeles and is one of only five children's hospitals in California. This is a large volume emergency department with excellent subspecialty and general pediatrics backup. There is flexible scheduling, minimum guarantee, fee-for-service, with attractive earning potential, full partnership at start-up with no buy-in, participatory management, and a friendly atmosphere. UCSF faculty appointment is available with an opportunity for teaching and research. Qualification requires BC/BE in general pediatrics with fellowship or experience in pediatric emergency medicine, PALS, ATLS, and California license. Fresno is one of the most affordable places to live in California. The Sierras, King Canyon National Park, Yosemite National Park, and the Central Pacific Coast are within 2–3 hours driving distance. Please send inquiries to: Sylvester Bryan, MD, Valley Children's Hospital, 3151 N Millbrook, Fresno, CA 93703. 209-225-3000. Fax: 209-222-6629, or send E-mail to Steven Szabo, MD, FAAP at: szabo@medisun.UCSFresno.edu.(via Internet).

MEDICAL DIRECTOR, CHILDREN'S HEALTH CARE— The Children's Hospital of Oklahoma at the University of Oklahoma Health Sciences Center is seeking nominations and applications for a Medical Director of the Pediatric Healthcare Network at Children's Hospital of Oklahoma. This appointment would be at the level of Associate Professor or Professor and require that the applicant be Board certified. The individual must demonstrate commitment to clinical care and teaching with scholarly contributions to the field of pediatrics. This individual will be expected to devote a majority of his or her time in the development and implementation of clinical practice guidelines, the development of clinical outcome measures, analyses of practice patterns and utilization, and the development of cost/quality models for managed care reimbursement. The University of Oklahoma is an Equal Opportunity/Affirmative Action Employer. Responses should be sent to: Terrence L. Stull, MD, Chairman, Dept of Pediatrics, PO Box 26901, The Children's Hospital of Oklahoma, Rm 2B300, Oklahoma City, OK 73190.

THE DIVISION OF GENERAL PEDIATRICS of the **UNIVERSITY OF UTAH SCHOOL OF MEDICINE** is seeking new faculty at the Assistant Professor level to participate in training residents in our new primary care residency program. Fellowship in general pediatrics or similar training/experience is preferred. Major activities will be precepting resident continuity clinics and assisting in administration of the residency. Other activities dependent upon interests and funding. Involvement in the Faculty Development Program and early progress toward research productivity expected. Interested individuals should contact: Chuck Norlin, MD, Chief, Division of General Pediatrics, Dept of Pediatrics, The University of Utah School of Medicine, 100 N Medical Dr, Salt Lake City, UT 84113. The University of Utah is an Equal Opportunity Employer. Applications from women and minorities are encouraged.

□

THE FUTURE IS LOOKING UP TO US

PEDIATRIC NUTRITION FELLOWSHIP

Division of GI and Nutrition

The Children's Hospital of Philadelphia, distinguished as the first in the nation dedicated solely to pediatric care, offers a three-year fellowship in pediatric nutrition.

This program involves one year of clinical work and two years of research, with the goal of preparing a pediatrician for leadership roles in nutrition on the clinical, research, and public policy levels. You will receive excellent clinical experience with inpatient and outpatient care, including TPN, home TPN, hyperlipidemia, GI, feeding disorders, obesity, and elective time for special interests. Coordination of training with other subspecialties, such as endocrinology, gastroenterology, metabolism or general pediatrics can be arranged. Research opportunities are broadly based at CHOP, University of Pennsylvania, and other regional institutions. Two positions will be available each year beginning July 1995.

For immediate consideration, please send CV or call: **Virginia Stallings, M.D., Division of GI and Nutrition, The Children's Hospital of Philadelphia, 34th Street & Civic Center Boulevard, Philadelphia, PA 19104-4399, (215) 590-1664.** EOE/AA M/F/D/V.

The Children's Hospital Of Philadelphia
Together, We Touch The Future

GRIFULVIN V®

[gri fulven]
(griseofulvin oral suspension)
microsize Suspension 125mg/5mL
(griseofulvin tablets)
microsize Tablets 250mg or 500mg

Indications and Usage

Major indications for GRIFULVIN V (griseofulvin microsize) are:

Tinea capitis (ringworm of the scalp)
Tinea corporis (ringworm of the body)
Tinea pedis (athlete's foot)
Tinea unguium (onychomycosis: ringworm of the nails)
Tinea cruris (ringworm of the thigh)
Tinea barbae (barber's itch)

GRIFULVIN V (griseofulvin microsize) inhibits the growth of those genera of fungi that commonly cause ringworm infections of the hair, skin, and nails, such as:

Trichophyton rubrum
Trichophyton tonsurans
Trichophyton mentagrophytes
Trichophyton interdigitalis
Trichophyton verrucosum
Trichophyton sulphureum
Trichophyton schoenleini
Microsporum audouini
Microsporum canis
Microsporum gypseum
Epidermophyton floccosum
Trichophyton megnini
Trichophyton gallinae
Trichophyton crateriform

Note: Prior to therapy, the type of fungi responsible for the infection should be identified. The use of the drug is not justified in minor or trivial infections which will respond to topical antifungal agents alone.

It is *not* effective in:

Bacterial infections
Candidiasis (Moniliasis)
Histoplasmosis
Actinomycosis
Sporotrichosis
Chromoblastomycosis
Coccidioidomycosis
North American Blastomycosis
Cryptococcosis (Torulosis)
Tinea versicolor
Nocardiosis

Contraindications

This drug is contraindicated in patients with porphyria, hepatocellular failure, and in individuals with a history of hypersensitivity to griseofulvin.

Two cases of conjoined twins have been reported in patients taking griseofulvin during the first trimester of pregnancy. Griseofulvin should not be prescribed to pregnant patients.

Warnings

Prophylactic Usage: Safety and efficacy of prophylactic use of this drug has not been established.

Chronic feeding of griseofulvin, at levels ranging from 0.5-2.5% of the diet, resulted in the development of liver tumors in several strains of mice, particularly in males. Smaller particle sizes result in an enhanced effect. Lower oral dosage levels have not been tested. Subcutaneous administration of relatively small doses of griseofulvin once a week during the first three weeks of life has also been reported to induce hepatomata in mice. Although studies in other animal species have not yielded evidence of tumorigenicity, these studies were not of adequate design to form a basis for conclusions in this regard.

In subacute toxicity studies, orally administered griseofulvin produced hepatocellular necrosis in mice, but this has not been seen in other species. Disturbances in porphyrin metabolism have been reported in griseofulvin-treated laboratory animals. Griseofulvin has been reported to have a colchicine-like effect on mitosis and cocarcinogenicity with methylcholanthrene in cutaneous tumor induction in laboratory animals.

Reports of animal studies in the Soviet literature state that a griseofulvin preparation was found to be embryotoxic and teratogenic on oral administration to pregnant Wistar rats. Rat reproduction studies done thus far in the United States and Great Britain have been inconclusive in this regard, and additional animal reproduction studies are underway. Pups with abnormalities have been reported in the litters of a few bitches treated with griseofulvin.

Suppression of spermatogenesis has been reported to occur in rats but investigation in man failed to confirm this.

Precautions

Patients on prolonged therapy with any potent medication should be under close observation. Periodic monitoring of organ system function, including renal, hepatic and hemopoietic, should be done.

Since griseofulvin is derived from species of penicillin, the possibility of cross sensitivity with penicillin exists, however, known penicillin-sensitive patients have been treated without difficulty.

Since a photosensitivity reaction is occasionally associated with griseofulvin therapy, patients should be warned to avoid exposure to intense natural or artificial sunlight. Should a photosensitivity reaction occur, lupus erythematosus may be aggravated.

Drug Interactions: Patients on warfarin-type anticoagulant therapy may require dosage adjustment of the anticoagulant during and after griseofulvin therapy. Concomitant use of barbiturates usually depresses griseofulvin activity and may necessitate raising the dosage.

The concomitant administration of griseofulvin has been reported to reduce the efficacy of oral contraceptives and to increase the incidence of breakthrough bleeding.

Adverse Reactions

When adverse reactions occur, they are most commonly of the hypersensitivity type such as skin rashes, urticaria and rarely, angioneurotic edema, and may necessitate withdrawal of therapy and appropriate countermeasures. Paresthesias of the hands and feet have been reported rarely after extended therapy. Other side effects reported occasionally are oral thrush, nausea, vomiting, epigastric distress, diarrhea, headache, fatigue, dizziness, insomnia, mental confusion and impairment of performance of routine activities.

Proteinuria and leukopenia have been reported rarely. Administration of the drug should be discontinued if granulocytopenia occurs.

When rare, serious reactions occur with griseofulvin, they are usually associated with high dosages and/or long periods of therapy.

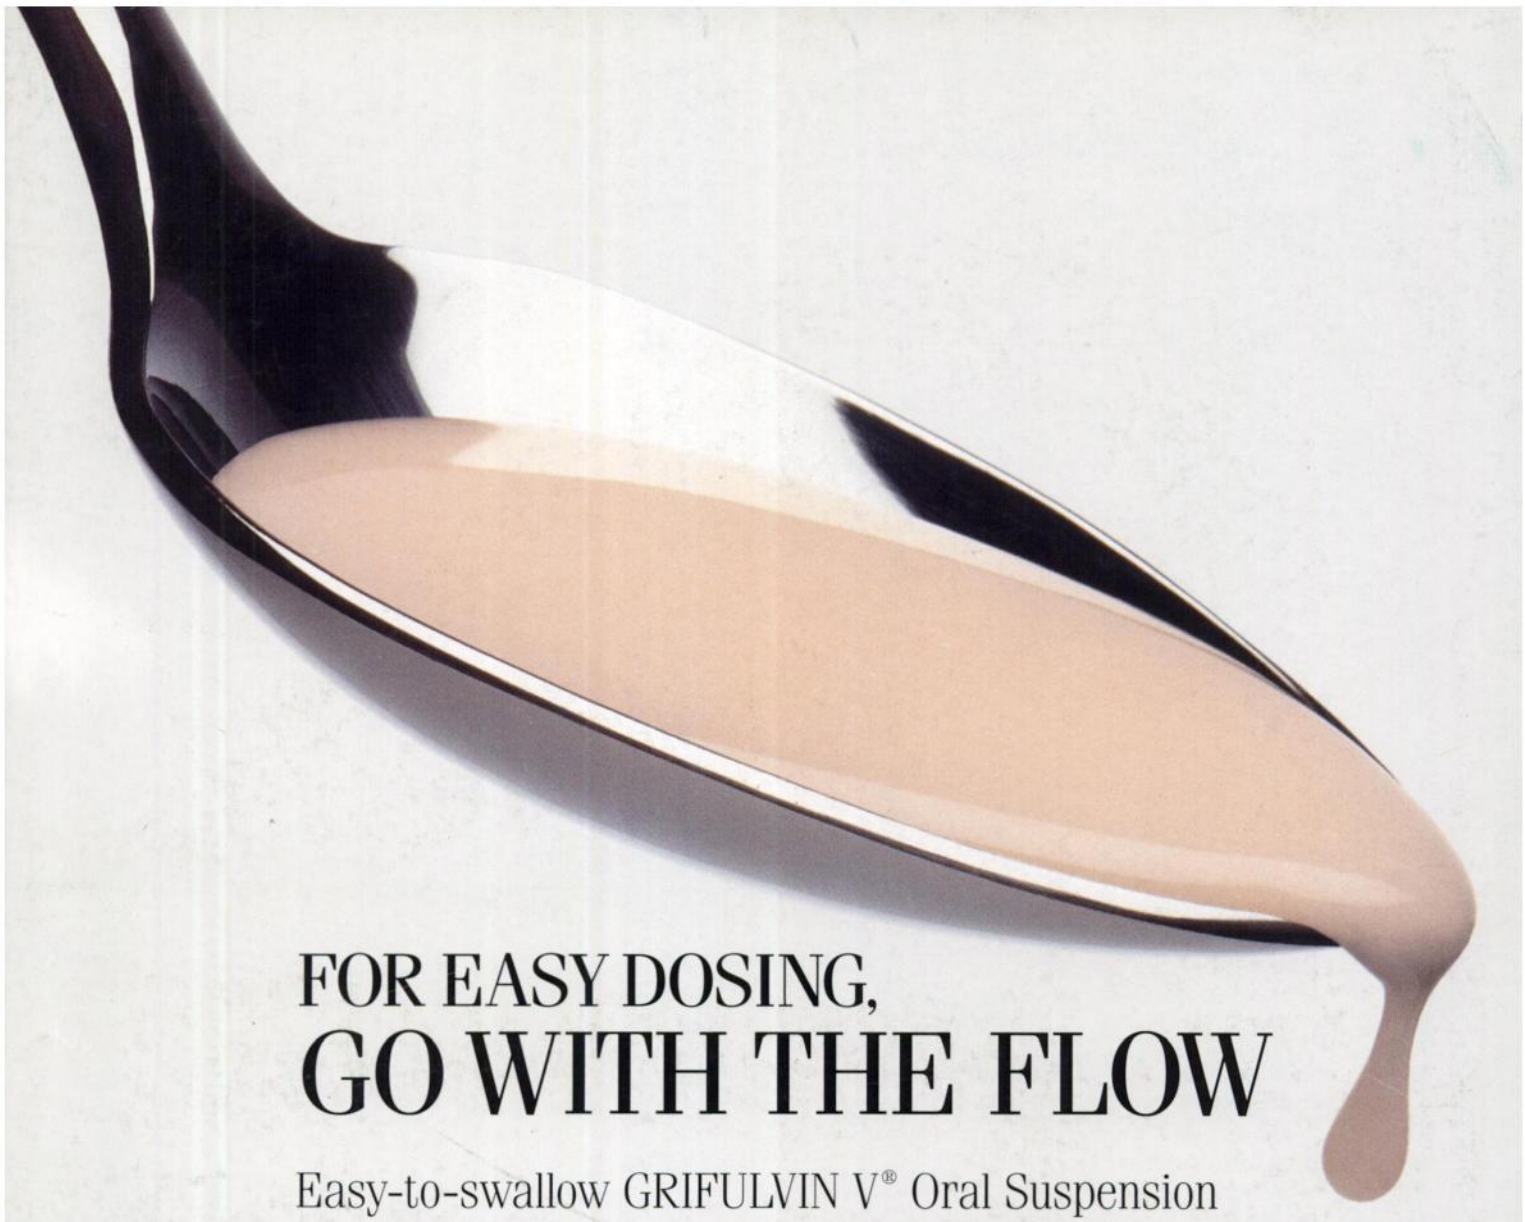
ORTHO



FOR EASY DOSING, GO WITH THE FLOW

Easy-to-swallow GRIFULVIN V® Oral Suspension may help patients get the full course of therapy you prescribe.

GRIFULVIN V®

(griseofulvin oral suspension)
microsize Suspension 125mg/5mL
(griseofulvin tablets)
microsize Tablets 250mg or 500mg

First in griseofulvin suspension

The most commonly reported adverse reactions are of the hypersensitivity type such as skin rashes, urticaria and, rarely angioneurotic edema.
