

Supplemental Information

SUPPLEMENTAL FIGURE 2 Model-based estimates of caregiver-reported barriers-to-care scores for all combinations of social disadvantage factors. Each combination is indicated by letters in the columns to the left, and estimates are black dots with surrounding 95% CIs. The center line represents the estimate for a patient with no social disadvantage factors. Models were controlled for age and medical complexity with clustering on patient. E, low education; I, interpreter; M, minority; P, public insurance; \$, low income.
