Examples: echocardiogram or MRI that may not be readily available but can be scheduled with advanced notice, patient with significant congenital cardiac anomalies to be discussed with cardiology physician before admission]

Not Available on LA4

Therapies and Services Not Offered at the Satellite Campus

[List of therapies that are unavailable at the satellite campus, would necessitate transfer to the main campus. Examples: dialysis and telemetry]

Specific Patient Populations Requiring Transfer to Main Campus for Subspecialty Evaluation

[List of specific patients and disease processes that require transfer. Example: post-septal cellulitis with orbital involvement to facilitate rapid ophthalmology team evaluation]

For Items Not Addressed in This Document

- Directly contact the subspecialty attending involved
- For time-sensitive issues, contact HM Leader on Call
- For issues that may be addressed later, contact satellite Medical Director

WRITTEN COMMUNICATION TO PATIENTS AND FAMILIES

Having your child in a hospital close to home can make things easier for your family in an already stressful situation. Our newer satellite facility has easy parking and spacious rooms and can accommodate a wide variety of patients. We also offer telemedicine for a variety of consults, which can be just as effective as in-person care.

As such, we would like to admit your child to the satellite campus. At any point, if we find that we need to transfer your child to the main campus, you will not have to pay for the cost of the transfer.

If you have questions or thoughts about this plan, please ask your care provider.
