

Supplemental Information

SUPPLEMENTAL FIGURE 4

Predicted probability of measles susceptibility by infant age for mothers aged 25, 30, 35, and 40 years based on a logistic model that was controlled for infant sex and maternal age.

SUPPLEMENTAL FIGURE 5

Predicted mean measles antibody titers by infant age for mothers aged 25, 30, 35, and 40 years based on a Poisson model that was controlled for infant sex and maternal age.
