SUPPLEMENTAL FIGURE 4

Characterization of T-cell double-negative phenotype in a case of MIS-C at 9 months postrecovery. A, Total DNTs represent 17.74% of total CD3⁺ cells. B, Gating only $\alpha\beta$ ⁺ CD3 cells shows total $\alpha\beta$ DNTs represent 2.13% of these cells, whereas (C) gating $\gamma\delta$ ⁺ CD3⁺ shows that these are the majority of the DNTs.
