What's on the menu for the allergic infant?

When the infant is allergic to the common staples of diet, adequate nutrition becomes a serious and vexing problem.

NUTRAMIGEN® is designed to help the physician solve that problem.

Nutramigen is a truly hypoallergenic food. Yet it provides the basic essentials for the growing infant's diet in balanced proportions, including:

- **Protein nourishment** in the form of Amigen®, a nonallergenic enzymic digest of casein.
- **Fat**, as a highly refined vegetable oil.
- **Carbohydrate**, principally as Dextri-Maltose®.
- **Crystalline B vitamins**, in proportions present in milk, plus minerals.

Nutramigen formulas are easily prepared by the simple addition of water. Literature and formula tables are available on request.

NUTRAMIGEN is supplied in 1 pound cans.

In answering advertisements please mention Pediatrics.
For the colic, diarrhea, or vomiting of Cow's Milk Lactalbumin Allergy prescribe Meyenberg Evaporated Goat Milk

A natural milk, nutritionally equivalent to evaporated cow's milk. May be substituted in formulae and recipes with no change in essential nutrient values (new recipe booklet available). Constant control assures uniformity, purity.

At most drug stores in 14-oz. cans. Advertised to the profession only. For information, file cards, and recipe booklets, write
Special Milk Products, Inc.

A dietary rich in natural vitamin C is a sound investment for a child's future health and happiness. Vitamin C is intimately involved in such vital bodily processes as collagen formation, mineral metabolism and calcium utilization, and is indispensable for development of bodily vigor, stamina and resistance to disease—from infancy on. A ready solution to this important nutritional problem is the inclusion of generous quantities of citrus fruits and juices at every meal. Their wealth of ascorbic acid, natural fruit sugars, and other essential nutrients make them a dietary “must” for the growing child—in sickness and in health. Their economy and varied appeal, and their year-round availability, recommend Florida Citrus Fruits and Juices, whether fresh, canned, frozen or concentrated.

ix
GENERAL INFORMATION

PEDIATRICS, the official publication of the American Academy of Pediatrics, Inc., publishes papers on scientific and clinical investigation in the field of pediatrics. PEDIATRICS also includes papers on public health and preventive medicine, genetics, nutrition, psychology, education, social legislation, nursing, surgery and sociology, when the subject matter is related to child health and welfare. PEDIATRICS is the medium of expression of the Academy to the medical profession and to the public. Contributions dealing with special spheres of interest to pediatricians are published in feature sections.

Manuscripts, books for review, and all correspondence concerning editorial matters should be sent to the Editor-in-Chief, La Rabida Jackson Park Sanitarium, Chicago 49, Illinois. Correspondence concerning the Academy should be sent to Dr. Clifford G. Grulee, Secretary and Treasurer, 636 Church Street, Evanston, Illinois. All correspondence concerning business matters, subscriptions, and advertising should be sent to Charles C Thomas, Publisher, 301-327 East Lawrence Avenue, Springfield, Illinois.

PEDIATRICS is published monthly. Subscription price a year: United States, Mexico, Cuba, Central and South America, $10.00; Canada, $11.00; other countries, $12.00. Current single numbers, $1.50. Special price for medical students, hospital residents, and fellows in full time training, $15.00 for a two-year subscription. Distributed in the British Commonwealth of Nations by Blackwell Scientific Publications, Ltd., 48 Broad Street, Oxford, England. Subscription price 6s per year.

MANUSCRIPTS: Acceptance of manuscripts for publication in the Division of Original Articles will be determined by the following criteria:

1. Originality of work being reported.
2. Contribution of significant new data.
3. The quality of presentation of material.

Reports of cases and other brief memoranda will be acceptable on the same basis as other original articles.

Manuscripts are published in the order received, but the Editor reserves the right to change this order when advisable. Date of receipt will be indicated when the paper is published. Manuscripts become the property of PEDIATRICS when they are accepted for publication, and the right is reserved to make editorial changes. Papers are accepted on condition that they have not been published elsewhere in whole or in part and that they are contributed exclusively to this journal, except by special consideration. Permission for reprinting in reputable publications is granted on request, if credit is given PEDIATRICS. Galley proofs and engraver's proofs are sent to authors. Original color drawings and photographs are returned on request.

REPRINTS: Fifty reprints without covers will be supplied on request to the principal author of an original article without cost. Additional reprints may be obtained on a cost-plus basis. A price list and order blank is enclosed with galley proofs. Orders must be sent in with return of the galley and not later than 10 days thereafter. Orders for reprints received after that date will be charged in full to the author. Requests for reprints by other individuals must be made directly to the author.

ABSTRACTS: Each author is to submit an abstract or summary intelligible without reference to the main text, when his manuscript is accepted for publication, for translation into Spanish.

BOOKS: Books of interest to pediatricians and which are related to child health and welfare will be reviewed when the book merits recommendation. Special attention will be given to first editions.
The use of massive doses of salicylates in the treatment of rheumatic fever and arthritis has recently stimulated tremendous interest in adjunct therapy to control gastric irritation and other toxic manifestations. Among the adjuncts previously recommended, sodium bicarbonate and other alkalies were found to lower the serum salicylate level.\(^1\,^2\) Para-aminobenzoic acid was found to cause gastric irritation and it failed to raise the blood level or influence excretion of free salicylate, as advocated recently.\(^2\)

Recent evidence shows that ascorbic acid (vitamin C) has been efficacious in increasing tolerance to sodium salicylate.\(^3\) Succinate, a physiological catalyst, obviates the toxic effect of salicylate.\(^4\)

DECOSal—a new concept in salicylate therapy—now permits massive dosage for therapeutic salicylate blood levels with complete freedom from serious reactions. DECOSal is based upon the combined effects of Salicylamide, the most potent of the salicylates; Succinic Acid, which counteracts salicylate toxicity; and Ascorbic Acid (vitamin C). Specifically, DECOSal obviates untoward hematic effects or depression of vitamin C levels; avoids gastric distress; provides dramatic symptomatic relief.

DECOSal Elixir in 16-oz. bottles.
DECOSal Tablets (double-scored, crush-up, uncoated), in bottles of 100, 500.
