SUBJECT INDEX

Items of pediatric and medical interest from other sources which appeared in this volume are included in the index and are followed by "note" in parentheses. "Ethics" includes items and topics of interest to ethicists as well as ethical issues per se.

Abscess

brain

complication of *Haemophilus influenzae* type b meningitis, 473 cured with antibiotic therapy, 220 following serial lumbar punctures,

epidural, following serial lumbar punctures, 476

Accidents

acute hyponatremia and seizures in infant after swimming, 125

burn injury related to microwave oven, 714

car seat burns (letter), 918

hazards of battery ingestion (letters),
434

massive clonidine ingestion in 9month-old infant, 500

toilet drownings (letter), 142

Acidosis, renal tubular in recurrent metabolic alkalosis, 207

Acne, severe cystic, new therapy for (committee statement), 258

Acquired immune deficiency syndrome (AIDS)

in children (commentary), 430 hepatitis B vaccine and (letters), 265

ADD, see Attention deficit disorder Adenoid hypertrophy, odor perception

and nasal obstruction, 510
Adolescents

chest pain in (letters), 914

congenital adrenal hyperplasia in, 690 cutoff policies in pediatric practice for, 420

effects and treatment of rape (committee statement), 738

hypnosis treatment for psychogenic stridor in athlete, 247

medical history associated with powerlifting, 636

self-esteem and other sociodemographic factors in teenage pregnancy, 632

treatment of growth failure and inflammatory bowel disease, 481

Adrenal hyperplasia, congenital, detection of late onset 21-hydroxylase deficency and, 690

α-adrenergic receptors, massive clonidine ingestion with hypertension,

Agangliosis, intestinal, medical treatment of (letter), 585

Age, gestational, standards for sternum

length, torso length, and internipple distance, 523

AIDS, see Acquired immune deficiency syndrome

Alae nasi activity, nasal resistance in preterm infants reduced by, 338

Alkalosis, metabolic, renal tubular acidosis and, 207

Aluminum, toxicity of (letters), 433
Amebiasis, cutaneous, comments on study (letters), 746

American Academy of Pediatrics

Committee statements

Ad Hoc Committee on Growth Hormone Usage, The Lawson Wilkins Pediatric Endocrine Society, and Committee on Drugs: Growth hormone in the treatment of children with short stature, 891

Committee on Adolescence: Homosexuality and adolescence, 249

Committee on Adolescence: Rape and the adolescent, 738

Committee on Adolescence: The role of the pediatrician in substance abuse counseling, 251

Committee on Bioethics: Treatment of critically ill newborns, 565

Committee on Children with Handicaps and Committee on Sports Medicine: Sports and the child with epilepsy, 884

Committee on Drugs: 'Look-alikes,'

Committee on Drugs: Neonatal drug withdrawal, 895

Committee on Drugs: New therapy for severe cystic acne, 258

Committee on Drugs: The transfer of drugs and other chemicals into human breast milk, 375

Committee on Fetus and Newborn and Committee on Drugs: Benzyl alcohol: Toxic agent in neonatal units, 356

Committee on Genetics and Environmental Hazards: Special susceptibility of children to radiation effects, 890

Committee on Hospital Care and Pediatric Section of the Society of Critical Care Medicine: Guidelines for pediatric intensive care units, 364

Committee on Infectious Diseases: Expanded guidelines for use of varicella-zoster immune globulin,

Committee on Nutrition: Soy-protein formulas: Recommendations for use in infant feeding, 359

Committee on Nutrition: The use of whole cow's milk is infancy, 253

Committee on Psychosocial Aspects of Child and Family Health: The pediatrician's role in discipline, 373

Committee on Research and Committee on Accident Prevention: Reducing the toll of injuries in childhood with a focused research effort, 736

American Board of Pediatrics, candidates certified, 270, 587

Amiodarone

adverse effects (commentary), 817 treatment of sustained tachyarrhythmias in Wolff-Parkinson-White syndrome (commentary), 813

Ampicillin, oropharyngeal carriage of Haemophilus influenzae resistant to, 464

Anemia

immune hemolytic, manifestation of histoplasmosis, 99

iron-deficiency

developmental consequences of infant maltreatment, 532

infant feeding practices and, 33

Anomaly

cerebrovascular, cerebral infarction related to neck position in adolescent, 335

congenital, changes in infant morbidity associated with decreases in neonatal mortality, 408

Antifungal therapy, use in premature infant with candidal arthritis and osteomyelitis, 234

Antithrombin, lowered levels during estrogen treatment of tall girls, 416 Apgar scores, defense of (letters), 580 Apnea

gastroesophageal reflux and (letter),

undetected episodes in preterm infants, 541

Arteritis, coronary, complication of systemic lupus erythematosus, 724 Arthralgia, hypermobility syndrome and, 701

Arthritis

Arthritis-continued

acute monarticular, caused by herpes simplex type 1, 882

candidal, antifungal therapy in premature infant with, 234

rheumatoid, noninvasive diagnosis of pulmonary hemorrhage in, 720

Arthrogryposis, in fetal akinesia deformation sequence, 857

Asthma

aerosol corticosteroids in treatment of (commentary), 130

cold air inhalation challenge in diagnosis of, 503

effect of inhaled beclomethasone dipropionate in children with, 60

fluorocarbon propellants and central nervous system stimulation in (letter), 438

interaction of theophylline with erythromycin base in patients with, 828

Ataxia, acute cerebellar, in pediatric legionellosis, 847

Atherosclerosis, coronary, complication of systemic lupus erythematosus, 724

Attention deficit disorder, effect of methylphenidate hydrochloride given with or before breakfast on, 49

Autopsy, retrospective study of changing neonatal mortality with hyaline membrane disease, 170

Autoregulation, by Doppler ultrasound in infants with subependymal/intraventricular hemorrhage, 665

Azarcón, cause of lead toxicity, 106

Baby Doe ruling, discussed by neonatologist (commentary), 428

Bacteremia

occult, treatment of, 608

polymicrobial, Polle syndrome and, 211

Bacterial infection

in children with hemoglobin SC disease, 93

neutrophils and zinc in children with sickle cell disease, 88

Beclomethasone dipropionate, effect on hypothalamic - pituitary - adrenal axis function in children with asthma, 60

Behavior

opportunities for expanding pediatric services, 619

pediatrician's role in discipline (committee statement), 373

Benzyl alcohol, toxic agent in neonatal units (committee statement), 356

Bifidobacteria, in breast-fed and bottlefed infants, 317

Bile acids

fat absorption as function of diet and duodenal bile acids in low-birthweight infants, 684

metabolism influenced by diet in lowbirth-weight infants, 677

Bioethics, treatment of critically ill newborns (committee statement), 565 Biostatistics

education and instruction in (commentary), 13

trends in *Pediatrics* (special article), 84

Birth defects

discussion of Baby Doe ruling by neonatologist (commentary), 428 fetal akinesia deformation sequence,

government policies on termination of life and (commentary), 128

Birth weight, factor in infant morbidity and neonatal mortality, 408

Bladder, neurogenic, ileal conduit and clean intermittent catheterization in treatment of, 203

Blood coagulation, estrogen treatment of tall girls and, 416

Blood flow, regional cerebral, measurement by positron emission tomography in infants with intraventricular hemorrhage, 589

Blood flow velocity, cerebral, impact of suctioning on, in preterm infant, 329

Blood pressure, validity of mass screening, 459

Blood transfusions, risk factor in retinopathy of prematurity, 159

Bonding

maternal-infant

discussion of commentary (letter), 574

early contact, social support, and, 79 effect of postpartum contact, 79 further comments (letters), 749

rebuttal to study (commentary), 569
Bone marrow transplantation, progress

and future prospects (commentary), 818

Bowel disease, inflammatory, treatment in adolescents, 481

Bradycardia

following massive clonidine ingestion, 500

undetected episodes in preterm infants, 541

Brain abscess

complication of Haemophilus influenzae type b meningitis, 473

cured with antibiotic therapy, 220 following serial lumbar puncture, 47

following serial lumbar puncture, 476
Brainstem gliosis, in victims of sudden
infant death syndrome, 181

Brazelton Neonatal Assessment Scale, enhancement of mother-child interaction and, 71

Breast-feeding, see also Infant feeding development of stool bacterial flora and, 317

effect on early milk production and infant weight gain, 307

first postnatal year infections and, 300 Bronchiolitis, ribavirin aerosol treatment associated with respiratory syncytial virus infection, 613

Burns

from car seats (letter), 918
resulting from improper use of microwave oven, 714

Calcium, sedimentation in premature infant formula, 37

Campylobacter, association with hemolytic-uremic syndrome (letter), 437

Car seats, burns from (letter), 918 Carboxyhemoglobin, maternal cigarette smoking and, 22 Care giver/infant interaction, computerized observations of, 198

Catheterization

bilateral pleural effusions and, 109 central venous, complicated by iatrogenic dissease, 109

clean intermittent, compared with ileal conduit in patients with myelomeningocele, 203

Cats, new syndrome in (letter), 585

Central nervous system, growth hormone deficiency and lesions of, 65

Cerebral ischemia, determined by positron emission tomography in infants with intraventricular hemorrhage, 589

Cerebritis, cured with antibiotic therapy, 220

Chemoprophylaxis, use in *Haemophilus* influenzae type b control strategy, 118

Chemotherapy

in treatment of tuberculosis, 801 short-course, hepatotoxicity from isoniazid and rifampin treatment of tuberculosis, 491

Chest, internipple distance in neonates, definition of standards, 523

Chest pain, in adolescents (letters), 914 Chickenpox, expanded guidelines for use of varicella-zoster immune globulin (committee statement), 886

Child abuse

caretaker-infant interaction and developmental consequences, 532

erythema multiforme confused with, 718

homicide as cause of pediatric mortality, 191

prediction of (letter), 437

sexual, sexually transmitted diseases and, 16

value of child maltreatment tests (letter), 139

Child care

infant development enhanced by Brazelton Neonatal Assessment Scale, 71

maternal employment and, 283

Child development, special interest area within general pediatrics, 275

Cholesterol, effects of dietary intake on bile acid metabolism in low-birthweight infants, 677

Choreoathetosis, phenytoin-induced, in infancy, 831

Chylothorax, as complication of central venous catheterization, 109

Cigarette smoking, maternal, effects on fetal oxygen transport, 22

Circadian rhythm, postnatal development of, in serum cortisol levels, 399

Circulation, cerebral

relationship of suctioning to changes in, 329

validity of Doppler measurements, 526 Circumcision

parental information and (letter), 142 response to study (letters), 750

Cisternography, lumbar, evaluation of hydrocephalus in preterm infant,

Cleft palate, congenital, a new gravityflow nipple for feeding infants with, 244

Clonidine, massive ingestion with hypertension in infant, 500

Cold air inhalation challenge, used in diagnosis of asthma, 503

Colic, caused by cow's milk proteins in breast-fed infants (letters), 267

 - control of sustained tachyarrhythmias in children with (commentary), 813
- Worms, moth larvae mistaken for stool parasites (letter), 579
- Xanthines, undetected episodes of prolonged apnea and severe bradycardia in preterm infants, 541
- Zinc, in infection-prone children with sickle cell disease, 88

NO JANITORS NEEDED IN JAPANESE SCHOOLS

Japanese teachers lose no opportunity to impress upon their charges, directly or indirectly, the overriding importance of the individual's responsibility to the group. There are, for example, no janitors in Japanese schools. Instead, the children themselves do the cleaning under the supervision of their teachers—a fact first reported to me with some incredulity by an American woman married to a Japanese editor. "Believe me," she added, "under this system, you don't get anybody running around spraying graffiti on the walls." In a similar vein, Atsushi Kayashima recalls that in his elementary school each class had its own little garden in the school yard, "and if one child failed to cultivate his plant properly, the rest of us had to stay on until he finished his task."

From R. C. Christopher: The Japanese Mind: The Goliath Explained. Simon & Schuster, New York, 1983, p 83.

THE GOAL OF GAME IS JOY, NOT HEALTH

Fitness gurus may tell us that athletic mishaps can be avoided by proper gear and pre-activity warm-up exercises, and by laying off when playing conditions aren't favorable, but we who have been at it for a while know that isn't strictly true. Sports accidents can be postponed, perhaps, but not prevented. If you stay at a game long enough, you'll get hurt.

The most elaborate statistics on the subject are compiled by the National Electronic Injury Surveillance System, a unit of the US Consumer Product Safety Commission. It monitors hospital emergency rooms for a wide variety of product-related injuries, and the raw numbers it comes up with are enough to give pause. In 1981, the latest year for which figures are available, it counted 550,000 bicycling injuries, 470,000 involving baseball, 442,000 in football, 433,000 for basketball, 96,000 for soccer, 47,000 for skiing, 38,000 for racquetball, squash or paddleball, 28,000 for tennis, and 19,000 for golf.

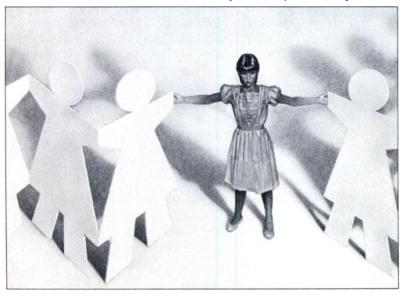

But that doesn't nearly tell the whole story, because you can get hurt pretty badly and not show up in a hospital emergency room.

Estimates of the proportion of runners who suffer some sort of temporarily disabling injury during a year range as high as 70%. About 10% of all skiers incur a severe leg injury annually; looked at another way, that means that if you ski for 10 years you'll almost certainly break a leg.

Even as innocuous a sport as golf carries an element of hazard. The Physician and Sportsmedicine, a magazine devoted solely to sports injuries, last year reported that 190 of a sample of 226 touring professional golfers said they have had to quit their sport at least once because of injury, with back, wrist and shoulder woes leading the list.

From F. C. Klein: On sports. The Wall Street Journal, Sept 7, 1983.

CUMBERLAND. Care that's cut from a different pattern. Cumberland, A Hospital for Children and Adolescents, offers a new pattern of care exclusively designed for children and adolescents whose recurring physical illnesses are compounded by emotional problems.

This 84-bed hospital located on 800 acres near Williamsburg, Virginia, brings a new generation of combined medical/psychiatric care to the special needs of young people.

An interdisciplinary treatment

An interdisciplinary treatment team of professionals from both the medical and psychiatric communities provides individualized patient care.

The unique Cumberland program offers a comprehensive range of services, including medical care, psychiatric treatment, a complete academic program, physical, respiratory and occupational therapies. Clinical and recreational activities are also available.

George M. Bright, M.D. Medical Director

Dean X. Parmelee, M.D. Psychiatric Director

For additional information contact Admissions, P.O. Box 150, New Kent, Virginia 23124, (804) 966-2242. Outside of Virginia call 1-800-368-3472

An Affiliate of The Brown Schools.

As children and adolescents become more active in sports, you need a guide that has answers to common and special sports medicine problems.

The American Academy of Pediatrics' book, Sports Medicine: Health Care for Young Athletes, provides you with this needed information—with guidelines on care.

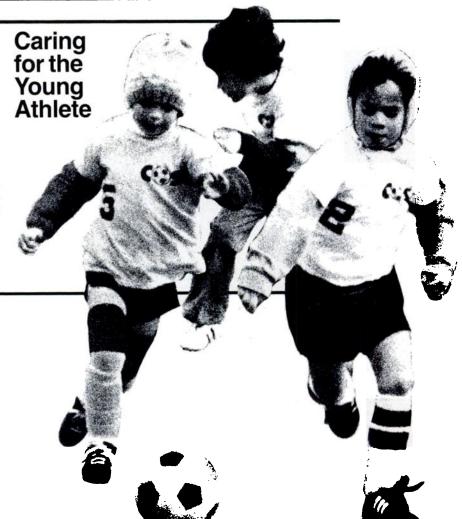

The book discusses prevention and management of sports-related illness and injuries. Other chapters deal with nutrition, stress reduction, and the role of the athletic trainer.

This book is for every physician who has been or will be involved in sports medicine. As an advisor to parents. As a team physician. As the parent of a young athlete from elementary school through high school.

ACTIFED-C EXPECTORANT ©

INDICATIONS: Based on a review of this drug by the National Academy of Sciences — National Research Council and/or other information, FDA has classified the indications as follows:

"Lacking substantial evidence of effectiveness as a fixed combi-For the symptomatic relief of cough in conditions such as: the common cold, acute bronchitis, allergic asthma, bronchi-olitis, croup, emphysema, tracheobronchitis.

Final classification of the less-than-effective indications requires further investigation.

CONTRAINDICATIONS:

Use in Newborn or Premature Infants: This drug should not be used in newborn or premature infants.

Use in Nursing Mothers: Because of the higher risk of antihistamines, codeine and sympathomimetic amines for infants generally and for newborn and premature in particular, Actifed-C Expectorant therapy is contraindicated in nursing mothers.

Use in Lower Respiratory Disease: Antihistamines should NOT be used to treat lower respiratory tract symptoms including asthma. Actifed-C Expectorant is also contraindicated in the following con-

Hypersensitivity to: 1) triprolidine hydrochloride and other antihistamines of similar chemical structure; 2) sympathomimetic amines including pseudoephedrine; and/or 3) any of the other ingredients.

Monoamine oxidase inhibitor therapy (see Drug Interactions Section) WARNINGS: Actifed-C Expectorant should be used with considerable

Increased intraocular pressure (Narrow angle glaucoma) Stenosing peptic ulcer Pyloroduodenal obstruction Symptomatic prostatic hypertrophy Bladder neck obstruction

caution in patients with

Hypertension Ischemic heart disease Hyperthyroidism

Sympathomimetics may produce central nervous system stimulation with convulsions or cardiovascular collapse with accompanying

Codeine can produce drug dependence of the morphine type, and therefore has the potential of being abused.

Use in Children: As in adults, the combination of an antihistamine and sympathomimetic amine can elicit either mild stimulation or mild sedation in children.

While it is difficult to predict the result of an *overdosage* of a combination of triprolidine, pseudoephedrine, and codeine the following is known about the individual components:

In infants and children especially, antihistamine in overdosage may cause hallucination, convulsion or death. Large doses of pseudo-ephedrine are known to cause weakness, lightheadedness, nausea and/or vomiting. An overdosage of codeine may cause CNS depression with muscular twitching and convulsion, weakness, disturbed vision, dyspnea, respiratory depression, collapse and coma.

Use in Pregnancy: Experience with this drug in pregnant women is inadequate to determine whether there exists a potential for harm to the developing fetus.

Use with CNS Depressants | Inprolidine and codeine phosphate have additive effects with alcohol and other CNS depressants (hypnotics, sedatives, tranquilizers, etc.)

Use in Activities Requiring Mental Alertness: Patients should be warned about engaging in activities requiring mental alertness such as driving a car or operating appliances, machinery, etc.

Use in the Elderly (approximately 60 years or older): Antihistamines are more likely to cause dizziness, sedation and hypotension in elderly patients. Overdosages of sympathomimetics in this age group may cause hallucinations, convulsions, CNS depression, and death.

PRECAUTIONS: Actifed-C Expectorant should be used with caution in patients with: history of bronchial asthma, increased intraocular pressure, hyperthyroidism, cardiovascular disease, hypertension.

DRUG INTERACTIONS: MAO inhibitors prolong and intensify the anti-DRUG INTERACTIONS: MAD innotions protong and intensity the anti-robiniergic (drying) effects of antihistamines and overall effects of sympathomimetics. Sympathomimetics may reduce the antihyperten-sive effects of methyldopa, decamylamine, reserpine, and veratrum alkaloids.

The CMS depressant effect of tripolidine hydrochloride and codeine phosphate may be additive with that of other CMS depressants.

- ADVERSE REACTIONS:

 1. General: Urticaria, drug rash, anaphylactic shock, photosensitivity, excessive perspiration, chills, dryness of mouth, nose and throat.
- 2. Cardiovascular System: Hypotension, headache, palpitations, tachycardia, extrasystoles.
- Hematologic System: Hemolytic anemia, thrombocytopenia, agranulocytosis.
- 4. Nervous System Sedation, sleepiness, dizziness, disturbed coordination, fatigue, confusion, restlessness, excitation, nervousness, tremot, irritability, insomnia, euphoria, paresthesias, blurred vision, diplopia, vertigo, tinnitus, acute labyrinthitis, hysteria, neuritis, convulsions, CNS depression, hallucination.
- G.I. System. Epigastric distress, anorexia, nausea, vomiting, diarrhea, constipation.
- 6. G.U. System: Urinary frequency, difficult urination, urinary reten-
- 7. Respiratory System: Thickening of bronchial secretions, tightness of chest and wheezing, nasal stuffiness.

NOTE: Guarlenesin has been shown to produce a color interference with certain clinical laboratory determinations of 5-hydroxyindole-acetic acid (5-HIAA) and vanillylmandelic acid (YMA).

HOW SUPPLIED: Bottles of 1 pint, 1 gallon and 4 oz Unit of Use Bottle

Burroughs Wellcome Co. Research Triangle Park North Carolina 27709

Control Children's Infectious Diseases

The American Academy of Pediatrics' Report of the Committee on Infectious Diseases provides current information and consensus on the effective control of children's communicable diseases.

Commonly called the "Red Book," this reference guide is a "state-of-the-art" handbook. It combines the expertise and assistance of physicians and consultants from the Academy's Committee on Infectious Diseases, liaison representatives from the Centers for Disease Control, the Canadian Paediatric Society, the Food and Drug Administration (FDA), and the NIH/National Institute of Allergy and Infectious Diseases.

Accessible. The latest edition discusses more than 100 communicable diseases. It is organized for efficient use: Part 1 discusses active and passive immunization. Part 2 includes summaries of infectious

diseases. Part 3 provides tables on drug dosages. Appendixes direct you to information on services offered by the Centers for Disease Control, and comprehensive indexes make information easy to find.

Expanded. There are new sections: Information sheets for parents about immunization. More than 30 tables showing agents which cause common childhood diseases. Still more on new vaccines and specific immune globulin preparations for hepatitis B, rabies, chicken pox, and pneumococcal infections.

Respected. The "Red Book" is a "must" for child health professionals including pediatricians, public health officials, hospital personnel, students, and educators.

OPPORTUNITIES

NEONATOLOGIST—Immediate opening for Board-certified or eligible neonatologist. Join busy solo practitioner in desirable Sun Belt area. Superior clinical skills required. Some experience preferred. Send CV to Box #128311.

NEW YORK—BC/BE pediatrician needed to join pediatrician, upstate area, with opportunity to practice exciting, busy, general pediatrics including neonatology, school health. Recent departure of pediatrician leaves established practice. Reply Box #128316.

PEDIATRICIAN needed to replace retiring partner in active general pediatric practice. Salary first year. Contact: Edward Arnett, MD, FAAP, 215 S Louisiana Ave, Martinsburg, WV 25401. (304) 263-8819.

 \sqcup

TEXAS—Faculty position in Hematology-Oncology in Department of Pediatrics, Baylor College of Medicine. BE/BC in Pediatric Hematology-Oncology. Involves patient care, teaching, and research. Emphasis is on oncology with preferred expertise in pharmacology. Send CV to Ralph D. Feigin, MD, Chairman, Department of Pediatrics, Baylor College of Medicine, 1200 Moursund Ave, Houston, TX 77020

ST PAUL, MN—Pediatric group seeking another associate, Board-certified or eligible. Terms negotiable. Contact: Robert T. Dooley, MD, 607 Central Medical Building, 393 North Dunlap St, St Paul, MN 55104.

NORTHWESTERN PENNSYLVANIA—Older solo pediatrician wants associate. Will quickly turn over practice to well-trained graduate. Over 7,000 visits per year, 150 newborns. Hospital with 180 beds with Level II nursery, excellent laboratory, echocardiography, linear accelerator, CT scan. Shares office building with the two leading obstetricians. Community very stable economically and culturally outstanding. Hunting, fishing, skiing, and boating. Schools excellent in academics and extracurricular programs, football, basketball, wrestling, band, et al. Reply Box #128313.

NEW YORK—BC/BE pediatrician to join busy, academically oriented practice. Drawing area 50,000 plus, equidistant (40 miles) from Rochester and Buffalo. Primary care, consultation, some neonatology. Privileges at two community hospitals and Children's Hospital of Buffalo. Teaching, faculty appointment at latter. Send CV to Box #128312.

Г

CARBONDALE CLINIC—Vacation center of Southern Illinois and home of Southern Illinois University, needs a sixth general pediatrician (fifth added last year). Medical school affiliation, family practice residents, hospital-based neonatologists, five or six weekends free, time off increased to eight weeks. Send resume and references to: C. Norman Geyer, MD, Carbondale Clinic, 2601 W Main, Carbondale, IL 62901. (618) 549-5361.

ALABAMA—Immediate opening for BE/BC neonatologist for 16-bed Alabama regional Level III unit with 14-bed intermediate unit. Attractive compensation guarantee. Within three-hour drive of Atlanta and Gulf Coast. Reply with CV to: Allan Cheek, Jr, MD, PO Box 11611, Montgomery, AL 36111 or phone (205) 288-2100, ext 6232.

PENNSYLVANIA—Busy three-physician practice in lake region of Poconos ready to expand to fourth BC/BE pediatrician. Ideal career opportunity, unlimited recreational activities, solid community setting. Salary and benefits competitive. Box #128322.

PENNSYLVANIA—Prime career opportunity for two (2) BC/BE pediatricians. Growing three-office practice looking to expand to satellite office in tri-state area. Ground work done. Well-populated communities provide stable patient base in New York-New Jersey-Pennsylvania locale. Area rich in recreational activities, easy access to major metropolitan cities. Box #128322.

 \Box

MASSACHUSETTS—Pediatrics. A search is being conducted for a full-time, joint appointment as the Thomas Morgan Rotch Professor of Pediatrics and Chairman of the Department of Pediatrics at Harvard Medical School, and as the Physician-in-Chief at The Children's Hospital, Boston. Responsibilities include oversight and management of patient care, research, pre- and postdoctoral education, and all other activities of the department. The Harvard Medical School and The Children's Hospital are Equal Opportunity/Affirmative Action employers. Send CV to: John A. Kirkpatrick, MD, Radiologist-in-Chief, Children's Hospital, 300 Longwood Ave, Boston, MA 02115.

GROUP OF FOUR pediatricians looking for Board-certified/ eligible pediatrician to join our practice in northeastern Ohio, July 1984. Reply with CV to: Children's Medical Group, 4575 Everhard Rd NW, Canton, OH 44718. Telephone (216) 492-6000.

PEDIATRICIAN—Allergist-Immunologist BC/BE. Outstanding opportunity to associate with three pediatricians in an accredited 50-physician multispecialty group. Drawing area nearly 400,000 with two well-staffed modern hospitals within five minutes of Clinic. Stimulating "Big-10" university community of 100,000 with superb cultural advantages. Ideal for families. Medical school teaching affiliation if desired. Excellent initial guarantee and fringes with early associateship; subsequent income based exclusively on productivity. Send CV to Box #128302.

PEDIATRICIAN—Board-certified or Board-eligible pediatrician wanted to locate in physicians' offices adjacent to a district hospital located in St Helens, Oregon. The hospital has a service commitment to some 33,000 people. St Helens is 25 miles north of Portland and offers the best of country living (fishing, sailing, hunting, skiing, and beaches) with the advantages of a large city just a few miles away. Contact: Scott Bremmer, Associate Administrator, Columbia District Hospital, St Helens, OR 97051. Telephone (503) 397-1188, ext 252.

PEDIATRICIAN—Valdosta, Georgia. Liaison-approved program. Guaranteed salary. Established MDs. Send CV to PO Box 450881, Atlanta, GA 30345.

NEONATOLOGY—Omaha, Nebraska. University hospital with established tertiary nursery seeks two neonatologists BC/BE to join Department of Pediatrics. Highrisk patient population provides basis for this 16-bed unit and an active transport system, via Life Flight, is also based at the hospital. Admissions per year average 450 to 500. Most pediatric subspecialties are available. Responsibilities include teaching of students and resident house staff with opportunities for research available. Salary negotiable. Contact D. M. Cathro, MD, Acting Chairman, Department of Pediatrics, Creighton University, 601 North 30th St, Omaha, NE 68131. (402) 280-4594.

PEDIATRICIAN/NEONATOLOGIST wanted to join BC pediatrician/neonatologist in busy office and hospital practice in an industrial Midwestern city with a well-established Regional Perinatal Center (30-bed NICU). University affiliation. Teaching and clinical research opportunities. Send CV to Box #128309.

KING FAISAL UNIVERSITY DAMMAM, SAUDI ARABIA

The College of Medicine and Medical Sciences with a 380-bed Teaching Hospital invites applications from Board-Certified clinical faculty in General Pediatrics with subspecialities in the following areas:

Neonatology-Neurology-Gastroenterology-Cardiology-Infectious Diseases

The language of instruction is English. Salaries are attractive and negotiable. Contracts are for one year and renewable.

Benefits include free furnished housing, air tickets once a year for a family of four, overweight baggage, and children educational allowances. No Saudi income taxes.

Interested applicants should send their curriculum vitae with contact address and telephone numbers along with the names and addresses of three references to:

Dr Tawfik Tamimi, Dean College of Medicine and Medical Sciences

c/o US Recruiting Office 2425 W Loop South Suite 540

Houston, TX 77027

THE PEDIATRIC ASSESSMENT of Learning Disorders, sponsored by Harvard Medical School and The Children's Hospital, will be held March 19–22, 1984 at the Meridien Hotel, Boston. Under the direction of Melvin D. Levine, MD, this course will focus on developmental variation and learning disorders in children 7 to 15 years of age. Participants will learn to perform and interpret pediatric neurodevelopmental assessments. For further information contact: Department of Continuing Education, Harvard Medical School, 25 Shattuck St, Boston, MA 02115.

INTERNATIONAL COLLEGE OF PEDIATRICS, Third International Symposium, Shoreham Hotel, Washington, DC, May 6–10, 1984. Information: George Maragos, Executive Director, Creighton University School of Medicine, Department of Pediatrics, 601 N 30th St, Omaha, NE 68131.

DECISION MAKING IN CONGENITAL HEART DIS-EASE—May 18–20, 1984, San Diego, California. \$350, 18 hours Category I CME. Write: Congenital Heart Disease, PO Box 9494, San Diego, CA 92109. (619) 272-3126.

PEDIATRICIANS, FAMILY PRACTITIONERS, GEN-**ERAL PRACTITIONERS**—One 2-week training opportunity in pediatric cardiology. CME Credits. Location: Mayo Clinic, Minneapolis Children's Health Center, University of Minnesota Hospitals, University of Iowa Hospitals or University of Nebraska Medical Center. Course Content: Training individualized to needs and background of trainee. Experience and training available in assessing critically ill neonates, infants, and children; skills of stabilization of the newborn, including placement of umbilical lines, respiratory support, fluid management, and skills in specific pediatric cardiologic diagnosis, including interpretation of electrocardiograms, murmurs, and X-rays. Stipends: \$75 per day will be provided to trainees for lodging and travel expenses. Contact person: James Moller, MD, Box 288, Mayo Building, 420 Delaware St SE, Minneapolis, MN 55455. Phone (612) 376-5454.

MANAGEMENT OF THE TINY BABY—Conference Feb 16–18, 1984 at the Americana Dutch Resort, Walt Disney World Village, Lake Buena Vista, Florida. Ten hours of Category I AMA credit will be awarded. For additional information, please contact: G. Alexander, MD, Orlando Regional Medical Center, 1414 S Kuhl Ave, Orlando, FL 32806. Telephone (305) 841-5111, ext 5384.

"...A TRULY VALUABLE addition to the literature on the effects of dietary sugar on human health ... encourages the reader to evaluate the evidence . . . would recommend this book to be read by not only the general public, but also the scientific community." Those words, from Dr Sheldon Reiser (Chief) and Dr Hallfrisch of the US Carbohydrate Nutrition Laboratory, describe the book, "NO SUGAR ADDED, or REDESIGNING OUR CHILDREN'S FUTURE," by Nicholas Krilanovich. This 300-page book, with 500 references from the recent scientific literature, develops powerful, unifying concepts. You will be surprised at the amount, diversity, and compelling nature of the total evidence: that there may be a special connection between Crohn's disease and consumption of sugared soft drinks; that there may be serious defects in previously accepted statements supporting present refined sugar consumption; that there may be something especially harmful about fructose; THAT A FIVE-YEAR-OLD CHILD CANNOT SAFELY HANDLE AS MUCH REFINED SUGAR AS ITS PARENTS CAN; that there may not be a threshold in the effects of refined sugars upon humans; THAT THE EMBRYO MAY BE THE MOST SENSITIVE PART OF THE HUMAN BODY! Unlike the fable, our children will not point out, "this Emperor has no clothes." It is we who must act. Send \$13.98 to November Books, Box 6173, Santa Barbara, CA 93160. Californians add sales tax. For Air Mail, add per book: \$3 in Western Hemisphere; \$5 elsewhere ... YES, A VALUABLE BOOK.

UNIVERSITY OF HAWAII SPORTS MEDICINE COURSE—Current principles of medical practice as applied to sports. Approved for 18 Category I credit hours by the AMA and 18 hours of PREP credit by the AAP. March 12–16, 1984, Honolulu. Contact: Joy Lewis, Box CEL-CCECS, 2530 Dole St, Honolulu, HI 96822. Telephone (808) 948-8244.

GENERAL PEDIATRICS—Jan 26–28, 1984. Royal Sonesta Hotel, New Orleans, Louisiana. Sponsored by the American Academy of Pediatrics. Guest faculty will include: Dr Robert H. Parrott—Infectious Diseases; Dr Laurence Finberg—Fluids and Electrolytes; Dr Avroy Arnold Fanaroff—Neonatology; Dr John E. Lewy—Nephrology/GU Disease; and Dr Paul H. Dworkin—Learning Disorders. AMA Category I and PREP Credits: 16 hours. A course program and registration form will be sent upon request. Contact: Jean Dow, Department of Education, American Academy of Pediatrics, PO Box 1034, Evanston, IL 60204. Or phone toll-free: (800) 323-0797.

GENERAL PEDIATRICS—March 9–11, 1984. Diplomat Resort, Hollywood, Florida. Sponsored by the American Academy of Pediatrics. Guest faculty will include: Dr William M. Michener—Gastroenterology; Dr Alvin M. Mauer—Nutrition; Dr Elizabeth R. McAnarney—Adolescence; Dr Edward J. Saltzman—Practice Management; and Dr William B. Strong—Sports Medicine. AMA Category I and PREP Credits: 16 hours. A course program and registration form will be sent upon request. Contact: Jean Dow, Department of Education, American Academy of Pediatrics, PO Box 1034, Evanston, IL 60204. Or phone toll-free: (800) 323-0797.

1984 CME CRUISE/CONFERENCES ON LEGAL-MEDICAL ISSUES—Caribbean, Mexican, Hawaiian, Alaskan, Mediterranean. Seven to 14 days in winter, spring, summer. Approved for 18 to 24 CME Cat I credits (AMA/PRA). Distinguished professors. FLY ROUND-TRIP FREE; Caribbean, Mexican, and Alaskan cruises. Excellent group fares on finest ships. Registration limited. Prescheduled in compliance with present IRS requirements. Information: International Conferences, 189 Lodge Ave, Huntington Station, NY 11746. (516) 549-0869.

The Fourth International Conference on Reye's Syndrome, June 21–22, 1984, The Hyatt-Regency Hotel, Columbus, Ohio. Sponsored by the Departments of Pediatrics at Ohio State University and the University of Cincinnati, The Children's Hospital, Columbus, The Children's Hospital Medical Center, Cincinnati, and The National Reye's Syndrome Foundation, Bryan, Ohio. Abstract, registration, CME, and hotel forms will be mailed in November. Write: Dr J. Dennis Pollack, General Chairman, 4th ICRS, Ohio State University, GGH 5072, 333 West 10th Ave, Columbus, OH 43210.

GENERAL PEDIATRICS—Jan 11–14, 1984. Marriott's Mark Resort, Vail, Colorado. Sponsored by the American Academy of Pediatrics. Guest faculty will include: Drs S. Douglas Frasier, Moses Grossman, Robert T. Hall, Charles E. Irwin, Jr, and Solomon Kaplan. Topics: Adolescence, Endocrinology, Infectious Diseases, Metabolism, and Newborn. AMA Category 1 and PREP credit: 16 hours. A course program and registration form will be sent upon request. Contact: Jean Dow, Department of Education, American Academy of Pediatrics, PO Box 1034, Evanston, IL 60204. Or phone toll-free: (800) 323-0797.

PEDIATRIC NUTRITION—April 23–25, 1984. Dutch Resort Hotel, Disney World, Florida. Early registration fee before December 31, 1983: physicians in US, \$285; trainees in US, \$150. Contact: Dr R. K. Chandra, Janeway Hospital, St John's, Newfoundland A1A 1R8, Canada.

"CRISIS AND EMERGENCY PEDIATRICS"—Jan 12–15, 1984. El Conquistador Resort, Tucson, Arizona, 17.75 hours. Contact: Continuing Medical Education, University of Arizona, College of Medicine, Tucson, AZ 85724. (602) 626-6173.

We try to present an accurate index. Occasionally this may not be possible because of a last-minute change or an omission.

Ask any bear what makes antibiotic therapy easier to swallow...

Chloraseptic—
it's good tasting medicine that works in minutes for temporary relief of minor sore throat pain.

Chloraseptic it's real relief that helps make life more comfortable until the antibiotic works.

There's a better route.

When relief is needed. When your patient can't keep the medicine down or won't accept it. The logical alternative is Phenergan® (promethazine HCI) Rectal Suppositories: 12.5 mg and 25 mg.

It's enough to put them in the pink!

where patients receiving promethazine developed leukopenia. In one instance agranulocytosis was reported. Other toxic agents known to cause these conditions almost always were associated with use of promethazine. Cardiovascular by-effects were rare. Minor increases in blood pressure, occasional mild hypotension were reported. Photosensitivity (extremely rare) contraindicates further use of promethazine or related drugs. Patients with abraded or denuded rectal lesions may experience initial local discomfort with promethazine suppositories. Attempted suicides resulted in Phenergan Promethazine HCI / Wyeth Rectal Suppositories deep sedation, coma, rarely convulsions and cardiorespiratory symptoms compatible with depth of sedation present. Paradoxical reaction was reported in children after single doses of 75-125 mg orally (hyperexcitability and nightmares). Composition: 12.5 and 25 mg promethazine HCl with ascorbyl palmitate, silicon dioxide, white wax, and cocoa butter. See full prescribing information. © 1983, Wyeth Laboratories.

Wyeth Laboratories

analgesics dose, e.g. morphine or meperidine, by 1/4 to 1/2

Precautions: Caution ambulatory patients against driving or operating dangerous machinery until it is known they do not become drowsy or dizzy from promethazine. Antiemetics may mask symptoms of unrecognized disease and interfere

Adverse Reactions: Patients may occasionally complain of

autonomic reactions, e.g. dryness of the mouth, blurring of vision and, rarely, dizziness. Very rare cases were reported
