

# GOOD THINGS COME TO THOSE WHO WAIT.

**Introducing Special Reports Television.** Now Special Reports expands to both a television and magazine program for your waiting room. It's designed to make waiting room time seem a lot shorter for your patients. SRTV provides network quality programming, with information and education geared to the needs of today's families. And another good thing, you can have SRTV at no cost to your practice. For more information call 1-800-637-8207.

**SPECIAL REPORTS**  
FOR TODAY'S FAMILY

# My kids had Orimune.<sup>®</sup>

Poliovirus Vaccine Live Oral Trivalent / Lederle

## I didn't.

Jackie, Gina, and Krista DiLorenzo are all superior athletes. Jackie is a world champion table tennis player. Her daughters excel in track and basketball. Unfortunately, Jackie must perform her sport in a wheelchair. Because, unlike Gina and Krista, Jackie was born too soon for ORIMUNE. Jackie is thankful her daughters were protected.

**Lederle Biologicals** Protecting Families Through Immunization<sup>®</sup>

Please see adjacent page for brief summary of Prescribing Information.

# When I was a child there was no Orimune®

## Proven in Millions of US Patients

ORIMUNE was the first live, oral, trivalent polio vaccine. No other oral polio vaccine has done more to help eradicate wild poliovirus in the US. Over 500 million doses have been distributed to date.

## Proven Safety\* Record

Lederle takes every precaution during production and testing to ensure the safety of ORIMUNE. This dedication is evident by our 28-year safety record.

## Uninterrupted Supply

Lederle has consistently met the nation's needs for oral polio vaccine for about 28 years. In fact, when all other US manufacturers discontinued the production of oral polio vaccine, Lederle has remained committed to this essential product and to the health of America's children.

## Convenient Unit-Dose DISPETTE®

ORIMUNE is packaged in a single-dose DISPETTE, which assures dosage accuracy and avoids the risk of contamination.

\*Paralytic disease following ingestion of live poliovirus vaccines has been reported on rare occasions in individuals receiving the vaccine or in their close contacts.

**Orimune®**  
Poliovirus Vaccine Live Oral Trivalent/Lederle

### Poliovirus Vaccine Live Oral Trivalent ORIMUNE®

#### A Brief Summary

Please see package insert for full description, directions for use, and references.

**INDICATIONS:** For prevention of poliomyelitis caused by Poliovirus Types 1, 2, and 3.

**CONTRAINDICATIONS:** Under no circumstances should this vaccine be administered parenterally.

Administration of the vaccine should be postponed or avoided in those experiencing any acute illness and in those with any advanced debilitated condition or persistent vomiting or diarrhea.

**ORIMUNE must not be administered to patients with immune deficiency diseases such as combined immunodeficiency, hypogammaglobulinemia, and agammaglobulinemia. Further, ORIMUNE must not be administered to patients with altered immune states, such as those occurring in thymic abnormalities, leukemia, lymphoma, or generalized malignancy or by lowered resistance from therapy with corticosteroids, alkylating drugs, antimetabolites, or radiation. ORIMUNE should also not be given to members of a household in which there is a family history of immunodeficiency until the immune status of all members is determined to be normal. All persons with altered immune status should avoid close household-type contact with recipients of the vaccine for at least six to eight weeks. Inactivated poliovirus vaccine (IPV) is preferred for immunizing all persons in the above described circumstances.**

**WARNINGS:** Under no circumstances should this vaccine be administered parenterally.

Administration of the vaccine should be postponed or avoided in those experiencing any acute illness and in those with any advanced debilitated condition or persistent vomiting or diarrhea.

Other viruses (including poliovirus and other enteroviruses) may interfere with the desired response to this vaccine, since their presence in the intestinal tract may interfere with the replication of the attenuated strains of poliovirus in the vaccine.

**PRECAUTIONS:** Preliminary data indicate that immune globulin (Human) (IG) does not appear to interfere with immunization with poliovirus vaccine live oral trivalent (OPV). However, until more data are available, it would seem prudent not to administer OPV shortly after IG, unless such a procedure is unavoidable, for example, with unexpected travel to or contact with epidemic areas or endemic areas. If OPV is given with or shortly after IG, the dose should probably be repeated after three months if immunization is still indicated.

The vaccine is not effective in modifying or preventing cases of existing and/or incubating poliomyelitis.

**NATIONAL CHILDHOOD VACCINE INJURY ACT OF 1986 (as amended in 1987)** Manufacturer and lot number of vaccine administered must be recorded by health care provider in vaccine recipient's permanent record, along with date of administration and name, address, and title of person administering vaccine.

Health care provider must report to a health department or to the FDA the occurrence following immunization of any event set forth in the Vaccine Injury Table including: paralytic poliomyelitis—in a nonimmunodeficient recipient within 30 days of vaccination—in an immunodeficient recipient within 6 months of vaccination; any vaccine-associated community case of paralytic poliomyelitis; or any acute complication or sequela (including death) of above events.

**Use in Pregnancy:** Pregnancy Category C: Animal reproduction studies have not been conducted with Poliovirus vaccine live oral trivalent. It is also not known whether OPV can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Although there is no convincing evidence documenting adverse effects of either OPV or IPV on the developing fetus or pregnant woman, it is prudent on theoretical grounds to avoid vaccinating pregnant women. However, if immediate protection against poliomyelitis is needed, OPV is recommended. (See **CONTRAINDICATIONS** and **ADVERSE REACTIONS**.)

**ADVERSE REACTIONS:** Paralytic disease following the ingestion of live poliovirus vaccines has been, on rare occasion, reported in individuals receiving the vaccine (see, for example, **CONTRAINDICATIONS**), and in persons who were in close contact with vaccinees. The vaccine viruses are shed in the vaccinee's stools for at least six to eight weeks as well as via the pharyngeal route. Most reports of paralytic disease following ingestion of the vaccine or contact with a recent vaccinee are based on epidemiological analysis and temporal association between vaccination or contact and the onset of symptoms. Most authorities believe that a causal relationship exists. Prior to administration of the vaccine, the attending physician should warn or specifically direct personnel acting under his authority to convey the warnings to the vaccinee, parent, guardian, or other responsible person of the possibility of vaccine-associated paralysis, particularly to susceptible family members and other close personal contacts.

The Centers for Disease Control report that during the years 1973 through 1984 approximately 274.1 million OPV doses were distributed in the US. During this same period, 105 vaccine-associated cases were reported (1 case per 2.6 million doses distributed). Of these 105 cases, 35 occurred in vaccine recipients (1 case per 7.8 million doses distributed), 50 occurred in household and nonhousehold contacts of vaccinees (1 case per 5.5 million doses distributed), 14 occurred in immunodeficient recipients or contacts, and 6 occurred in persons with no history of vaccine exposure, from whom vaccine-like viruses were isolated.

Thirty-three (94%) of the recipient cases, 41 (82%) of the contact cases, and 5 (36%) of the immune deficient cases were associated with the recipient's first dose of OPV. Because most cases of vaccine-associated paralysis have occurred in association with the first dose, the CDC has estimated the likelihood of paralysis in association with first v subsequent doses of OPV, using the number of births during 1973-1984 to estimate the number of first doses distributed, and subtracting this from the total distribution to estimate the number of subsequent doses distributed. This method estimates a frequency of paralysis for recipients of 1 case per 1.2 million first doses v 1 case per 116.5 million subsequent doses; for contacts one case per 1 million first doses v 25.9 million subsequent doses; with an overall frequency of 1 case per 520,000 first doses v 1 case per 12.3 million subsequent doses.

Other methods of estimating the likelihood of paralysis in association with OPV have been described. Because the number of susceptible vaccine recipients or contacts of recipients is not known, the true risk of vaccine-associated poliomyelitis is impossible to determine precisely.

When the attenuated vaccine strains are to be introduced into a household with adults who have not been adequately vaccinated or whose immune status cannot be determined, the risk of vaccine-associated paralysis can be reduced by giving these adults one dose of IPV per month for three months before the children receive Poliovirus vaccine live oral trivalent ORIMUNE. The children may receive the first dose of ORIMUNE at the same visit that the adult receives the third dose of IPV. The CDC reports that no paralytic reactions to IPV are known to have occurred since the 1955 cluster of poliomyelitis cases caused by vaccine that contained live polioviruses that had escaped inactivation.

The ACIP states: "Because of the overriding importance of ensuring prompt and complete immunization of the child and the extreme rarity of OPV-associated disease in contacts, the Committee recommends the administration of OPV to a child regardless of the poliovirus-vaccine status of adult household contacts. This is the usual practice in the United States. The responsible adult should be informed of the small risk involved. An acceptable alternative, if there is a strong assurance that ultimate, full immunization of the child will not be jeopardized or unduly delayed, is to immunize adults according to the schedule outlined above before giving OPV to the child."

The ACIP has concluded that "Oral polio vaccine remains the vaccine of choice for primary immunization of children."

## **DRAWBACK OF UNRELIEVED HAPPINESS**

The *Seattle Post Intelligencer* says that a couple in Leigh, England, was denied the right to adopt a child because of too happy a marriage; they would not be able to expose a youngster to enough “negative experiences.” Explained the authorities: “It would seem from the interviews and reports that both of you have had few, if any, negative experiences when children yourselves, and also seem to enjoy a marital relationship where rows and arguments have no place.”

These two should apply again; they have now had at least one negative experience.

Espy WR. The word's gotten out. Quoted by: *New York Times Book Review*. January 7, 1990.

## **HOW HAVE WE COME TO THIS?**

Selective discreetness has become a valued commodity in our society's attitude toward death. It is a violent society where every year drunken drivers kill more than 23 000 people, 3000 more than regular murders. . .But when a Missouri family tries to let its vegetative daughter die, it must end up before the Supreme Court.

Malcolm AH. The ultimate decision. *New York Times Magazine*. December 3, 1989.

# BOSTON

## American Academy of Pediatrics Annual Meeting October 5–10, 1990

Plan now to attend the American Academy of Pediatrics' 59th Annual Meeting in Boston. New this year are Dialogue Sessions, designed for participant/speaker interaction. Nationally recognized speakers include:

### Infectious Diseases

George H. McCracken, MD, FAAP  
Sheldon L. Kaplan, MD, FAAP  
Samuel L. Katz, MD, FAAP  
Jerome O. Klein, MD, FAAP

### Dermatology

Sidney Hurwitz, MD, FAAP

### Child Development

Leon Eisenberg, MD, FAAP  
Barry S. Zuckerman, MD, FAAP

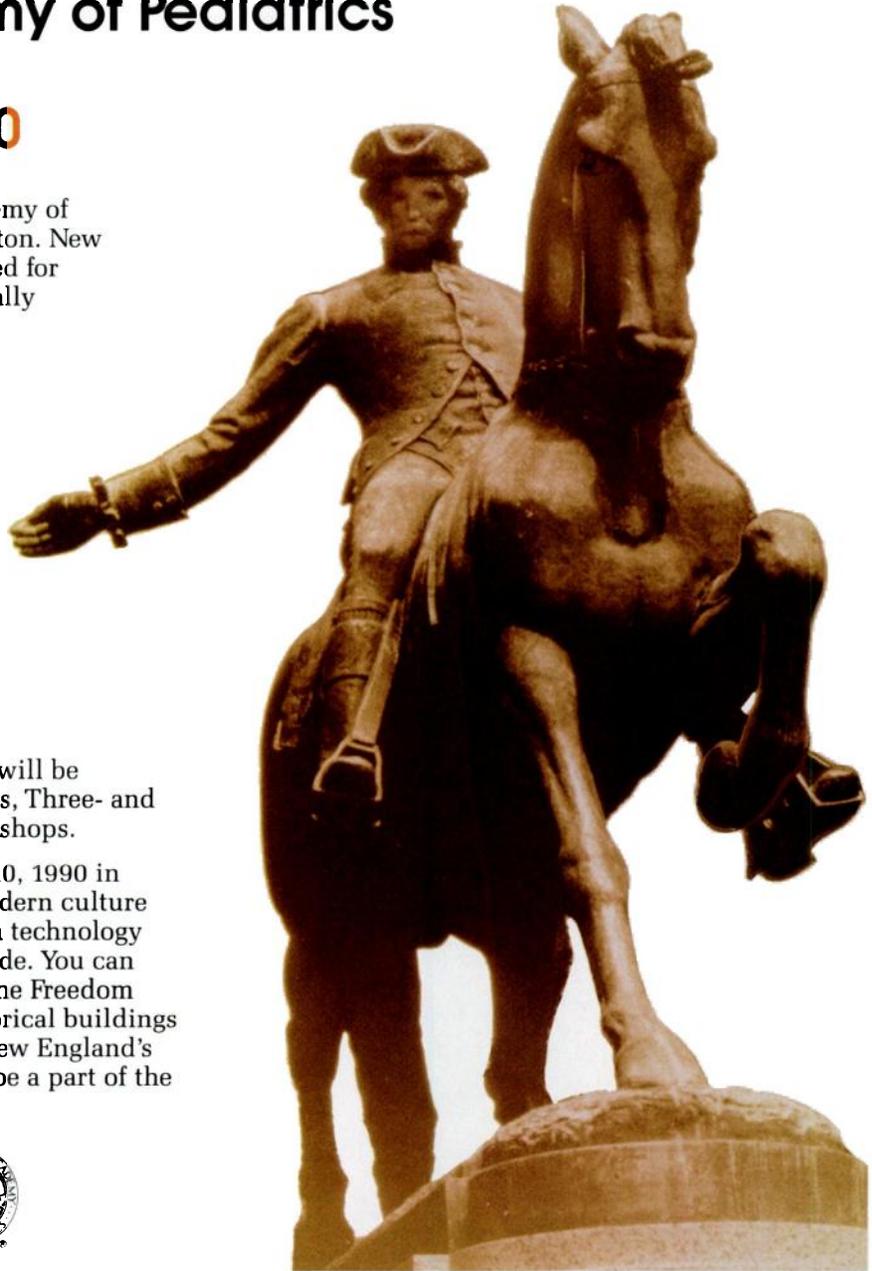

### Sports Health

James Garrick, MD

A rich variety of scientific information will be presented in expanded Plenary Sessions, Three- and Six-Hour Seminars, and hands-on Workshops.

Join us Friday–Wednesday, October 5–10, 1990 in Boston. You'll find a city filled with modern culture and old-world charm; a city where high technology and colonial architecture live side by side. You can follow the path of Paul Revere or walk the Freedom Trail that leads you to many of the historical buildings in the downtown area. Boston is also New England's center for cultural events, and you can be a part of the excitement while earning CME credits.

American Academy  
of Pediatrics

Please send me registration information about the AAP Annual Meeting in Boston. (Note: All Academy members will receive a program and registration packet in August.)

# THE SILENT ENERGY CRISIS

The lethargic, hypotonic child. The fretful infant who doesn't eat. No specific evidence of disease...yet something clearly is wrong.

Fortunately, pediatricians are now identifying a cause of these and other similarly perplexing symptoms: an inability to metabolize fatty acids. One cause of this problem is primary systemic carnitine deficiency.

## Why children require adequate carnitine

Carnitine is essential for fatty-acid oxidation and synthesis in energy production. Carnitine deficiency results in loss of energy and toxic accumulations of free fatty acids. When carnitine supply is inadequate, heart and skeletal muscle activity may be severely impaired.

Primary systemic carnitine deficiency may be associated with the following:

- hypoglycemia
- hypotonia
- hepatomegaly
- hepatic coma
- congestive heart failure
- neurologic disturbances
- progressive myasthenia
- lethargy
- encephalopathy
- cardiomegaly
- cardiac arrest
- impaired growth and development in infants

Because oral carnitine therapy has been proven effective in primary systemic carnitine deficiency in children and because it has little or no toxicity,<sup>1</sup> CARNITOR® (levocarnitine) should be considered in all suspected cases of this syndrome.

## So safe, there are no contraindications

CARNITOR® has no serious side effects apart from mild diarrhea, which is easily reversible with dosage adjustment or discontinuance. Because mild GI complaints have been reported, tolerance should be monitored closely during the first week and after any dosage increase.

*Pediatric dosage:* 50 -100 mg/kg/day of CARNITOR® Tablets or CARNITOR® (100 mg/ml) Oral Solution.

# CARNITOR®

(LEVOCARNITINE) FOR INFORMATION:  
(800) 447-0169

**THE ONLY PRESCRIPTION FORMULATION IN TABLETS AND ORAL SOLUTION**

See brief summary of CARNITOR® (levocarnitine) prescribing information on the adjacent page.

# **CARNITOR**<sup>®</sup>

(LEVOCARNITINE)

**Reference:** 1. Lohninger A, Kaiser E, Legenstein E, et al: Carnitine, metabolism and function, in Kaiser E, Lohninger A (eds): *Carnitine—Its Role in Lung and Heart Disorders*. Basel, Switzerland, Karger, 1987, p 4.

## **CARNITOR<sup>®</sup> (LEVOCARNITINE)**

Before prescribing, please consult complete product information, a summary of which follows:

**INDICATIONS AND USAGE** CARNITOR (levocarnitine) is indicated in the treatment of primary systemic carnitine deficiency.

**CONTRAINDICATIONS** None known.

**WARNINGS** None.

### **PRECAUTIONS**

**General** CARNITOR Oral Solution is for oral/internal use only. **Not for parenteral use.** Gastrointestinal reactions may result from too rapid consumption. CARNITOR Oral Solution may be consumed alone, or dissolved in drinks or other liquid foods to reduce taste fatigue. It should be consumed slowly and doses should be spaced evenly throughout the day (every 3-4 hours, preferably during or following meals) to maximize tolerance.

**Carcinogenesis, Mutagenesis, Impairment of Fertility** Mutagenicity tests have been performed in *Salmonella typhimurium*, *Saccharomyces cerevisiae*, and *Schizosaccharomyces pombe* that do not indicate that CARNITOR is mutagenic. Long-term animal studies have not been conducted to evaluate the carcinogenicity of the compound.

**Usage in pregnancy** *Pregnancy Category B* Reproductive studies have been performed in rats and rabbits using parenteral administration at doses equivalent on a mg/kg basis to the suggested oral adult dosage and have revealed no harm to the fetus due to CARNITOR. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

**Nursing mothers** Levocarnitine is a normal component of human milk. Levocarnitine supplementation in nursing mothers has not been studied.

**Pediatric use** See Dosage and Administration.

**ADVERSE REACTIONS** Various mild gastrointestinal complaints have been reported during the long-term administration of oral L- or D, L-carnitine; these include transient nausea and vomiting, abdominal cramps, and diarrhea. Mild myasthenia has been described only in uremic patients receiving D, L-carnitine. Gastrointestinal adverse reactions with CARNITOR Oral Solution dissolved in liquids might be avoided by slow consumption or by greater dilution. Decreasing the dosage often diminishes or eliminates drug-related patient body odor or gastrointestinal symptoms when present. Tolerance should be closely monitored during first week of administration, and after any dosage increases.

**OVERDOSAGE** There have been no reports of toxicity from carnitine overdosage. The oral LD<sub>50</sub> of levocarnitine in mice is 19.2 g/kg. Carnitine may cause diarrhea. Overdosage should be treated with supportive care.

### **DOSAGE AND ADMINISTRATION**

**CARNITOR Tablets:** Recommended adult dosage is 990 mg two or three times a day using the 330-mg tablets, depending on clinical response. Recommended dosage for infants and children is 50-100 mg/kg/day in divided doses, with a maximum of 3 g/day. Dosage should begin at 50 mg/kg/day. The exact dosage will depend on clinical response. Monitoring should include periodic blood chemistries, vital signs, plasma carnitine concentrations, and overall clinical condition.

**CARNITOR Oral Solution:** Recommended adult dosage is 1-3 g/day for a 50-kg subject which is equivalent to 10-30 ml/day of CARNITOR Oral Solution. Higher doses should be administered only with caution and only where clinical and biochemical considerations make it seem likely that higher doses will be of benefit. Dosage should start at 1 g/day (10 ml/day), and be increased slowly while assessing tolerance and therapeutic response. Monitoring should include periodic blood chemistries, vital signs, plasma carnitine concentrations, and overall clinical condition.

Recommended dosage for infants and children is 50-100 mg/kg/day which is equivalent to 0.5 ml/kg/day CARNITOR Oral Solution. Higher doses should be administered only with caution and only where clinical and biochemical considerations make it seem likely that higher doses will be of benefit. Dosage should start at 50 mg/kg/day, and be increased slowly to a maximum of 3 g/day (30 ml/day) while assessing tolerance and therapeutic response. Monitoring should include periodic blood chemistries, vital signs, plasma carnitine concentrations, and overall clinical condition. See **PRECAUTIONS/General** above for additional information.

**HOW SUPPLIED** CARNITOR Tablets are supplied as 330-mg, individually foil-wrapped tablets in boxes of 90. Store at room temperature (25°C). CARNITOR Oral Solution is supplied in 118-ml (4 fl oz) multiple-unit plastic containers packaged 24 per case. Store at room temperature (25°C).

**CAUTION** Federal (USA) law prohibits dispensing without prescription.

## WILLIAM BENNETT, PLEASE PAY ATTENTION!

Most scientist recognize David Jones as a kind of Art Buchwald of science. Each week, the physical chemist at England's Newcastle University writes a column called Daedalus for the prestigious scientific journal Nature. He picks some scientific phenomenon and projects it to absurdity or, as Mr Jones puts it, "I try to jump ahead of reality."

Recently, for example, he suggested a way to make self-sealing soap bubbles that would survive pinpricks. He also has suggested that if disposable baby diapers were made of living sphagnum moss, they would be self-cleaning and reusable. After use, he reasoned, they would regrow, using up their built-in supply of fertilizer.

In a mid-June column, Mr Jones noted that a century ago an attempt to transplant the coca plant to Indonesia from South America failed because the transplanted plants, while thriving, didn't make cocaine. He had Daedalus speculate that some Indonesian plant virus might have been responsible and suggested that the virus be found and covertly introduced to South American coca plantations. The coca plants, "freed from this pointless biochemical burden" of making cocaine, "would flourish as never before, but would enigmatically fail to yield any cocaine.

"Apoplectic drug barons and Mafia bosses would suddenly find themselves making a loss on their investment. All concerned would have to find another racket, or even (if all else failed) an honest trade."

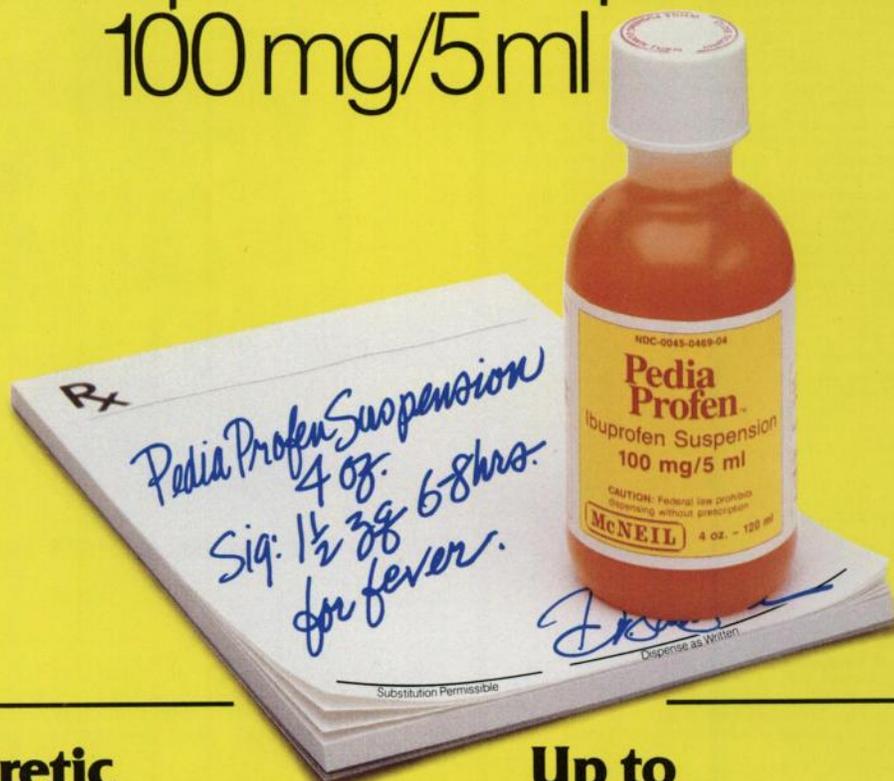

Bishop JE. Cocaine: A puckish scientist's 'antisense' solution. *The Wall Street Journal*. December 28, 1989.

# A new alternative for fever

# Pedia Profen™

## Ibuprofen Suspension

### 100 mg/5 ml

## Antipyretic efficacy

In children with temperatures greater than 102.5° F, ibuprofen 10 mg/kg is more effective than ibuprofen 5 mg/kg or acetaminophen 10 mg/kg! And the only ibuprofen suspension indicated for use in children as young as 6 months is PediaProfen.

## Up to 8-hour relief

Ibuprofen 10 mg/kg provides longer duration of antipyresis than acetaminophen<sup>1,2</sup>—up to 8 hours of relief. That means fewer interruptions in the family's work, school, or sleep schedules. And PediaProfen is pleasant-tasting, so it's easy to take.

COMPREHENSIVE FEVER MANAGEMENT FROM **McNEIL**

**References:** 1. Watson PD, et al. Ibuprofen, acetaminophen and placebo treatment of febrile children. *Clin Pharmacol Ther.* 1989;46:9-17. 2. Data on file, McNeil Consumer Products Company.

McNEIL CONSUMER PRODUCTS CO.  
Division of McNeil-PPC, Inc.  
Fort Washington, PA 19034 USA

A new alternative for fever

# PediaProfen™

Ibuprofen Suspension 100 mg/5 ml

The following is a brief summary only. Before prescribing, see complete prescribing information in PediaProfen labeling.

**INDICATIONS AND USAGE:** PediaProfen is indicated for the reduction of fever in patients aged 6 months and older, and for the relief of mild-to-moderate pain in patients aged 12 years and older.

**CLINICAL PHARMACOLOGY:** Controlled clinical trials comparing doses of 5 and 10 mg/kg ibuprofen and 10-15 mg/kg of acetaminophen have been conducted in children 6 months to 12 years of age with fever primarily due to viral illnesses. In these studies there were no differences between treatments in fever reduction for the first hour and maximum fever reduction occurred between 2 and 4 hours. Response after 1 hour was dependent on both the level of temperature elevation as well as the treatment. In children with baseline temperatures at or below 102.5°F, both ibuprofen doses and acetaminophen were equally effective in their maximum effect. In those children with temperatures above 102.5°F, the ibuprofen 10 mg/kg dose was more effective. By 6 hours children treated with ibuprofen 5 mg/kg tended to have recurrence of fever, whereas children treated with ibuprofen 10 mg/kg still had significant fever reduction at 8 hours. In control groups treated with 10 mg/kg acetaminophen, fever reduction resembled that seen in children treated with 5 mg/kg of ibuprofen, with the exception that temperature elevation tended to return 1-2 hours earlier.

**CONTRAINDICATIONS:** PediaProfen should not be used in patients who have previously exhibited hypersensitivity to ibuprofen, or in individuals with all or part of the syndrome of nasal polyps, angioedema and bronchospastic reactivity to aspirin or other nonsteroidal anti-inflammatory agents. Anaphylactoid reactions have occurred in such patients.

**WARNINGS: Risk of GI Ulceration, Bleeding and Perforation with NSAID Therapy.** Serious gastrointestinal toxicity such as bleeding, ulceration, and perforation, can occur at any time, with or without warning symptoms, in patients treated chronically with NSAID therapy. Although minor upper gastrointestinal problems, such as dyspepsia, are common, usually developing early in therapy, physicians should remain alert for ulceration and bleeding in patients treated chronically with NSAIDs even in the absence of previous GI tract symptoms. In patients observed in clinical trials of several months to two years duration, symptomatic upper GI ulcers, gross bleeding or perforation appear to occur in approximately 1% of patients treated for 3-6 months, and in about 2-4% of patients treated for one year. Physicians should inform patients about the signs and/or symptoms of serious GI toxicity and what steps to take if they occur.

Studies to date have not identified any subset of patients not at risk of developing peptic ulceration and bleeding. Except for a prior history of serious GI events and other risk factors known to be associated with peptic ulcer disease, such as alcoholism, smoking, etc., no risk factors (e.g., age, sex) have been associated with increased risk. Elderly or debilitated patients seem to tolerate ulceration or bleeding less well than other individuals and most spontaneous reports of fatal GI events are in this population. Studies to date are inconclusive concerning the relative risk of various NSAIDs in causing such reactions. High doses of any NSAID probably carry a greater risk of these reactions, although controlled clinical trials showing this do not exist in most cases. In considering the use of relatively large doses (within the recommended dosage range), sufficient benefit should be anticipated to offset the potential increased risk of GI toxicity.

**PRECAUTIONS: General:** Blurred and/or diminished vision, scotomata, and/or changes in color vision have been reported. If a patient develops such complaints while receiving PediaProfen, the drug should be discontinued and the patient should have an ophthalmologic examination which includes central visual fields and color vision testing.

Fluid retention and edema have been reported in association with ibuprofen; therefore, the drug should be used with caution in patients with a history of cardiac decompensation or hypertension.

PediaProfen, like other nonsteroidal anti-inflammatory agents, can inhibit platelet aggregation, but the effect is quantitatively less and of shorter duration than that seen with aspirin. Ibuprofen has been shown to prolong bleeding time (but within the normal range) in normal subjects. Because this prolonged bleeding effect may be exaggerated in patients with underlying hemostatic defects, PediaProfen should be used with caution in persons with intrinsic coagulation defects and those on anticoagulant therapy.

Patients on PediaProfen should report to their physicians signs or symptoms of gastrointestinal ulceration or bleeding, blurred vision or other eye symptoms, skin rash, weight gain, or edema.

In order to avoid exacerbation of disease of adrenal insufficiency, patients who have been on prolonged corticosteroid therapy should have their therapy tapered slowly rather than discontinued abruptly when ibuprofen is added to the treatment program.

The antipyretic and anti-inflammatory activity of PediaProfen may reduce fever and inflammation, thus diminishing their utility as diagnostic signs in detecting complications of presumed noninfectious, noninflammatory painful conditions.

Since ibuprofen is eliminated primarily by the kidney, patients with significantly impaired renal function should be closely monitored and a reduction in dosage should be anticipated to avoid drug accumulation. Prospective studies on the safety of ibuprofen in patients with chronic renal failure have not been conducted.

Safety and efficacy of PediaProfen in children below the age of 6 months has not been established.

**Pregnancy:** Reproductive studies conducted in rats and rabbits at doses somewhat less than the maximal clinical dose did not demonstrate evidence of developmental abnormalities. However, animal reproduction studies are not always predictive of human response. As there are no adequate and well-controlled studies in pregnant women, this drug should be used during pregnancy only if clearly needed. Because of the known effects of nonsteroidal anti-inflammatory drugs on the fetal cardiovascular system (closure of ductus arteriosus), use during late pregnancy should be avoided. As with other drugs known to inhibit prostaglandin synthesis, an increased incidence of dystocia and delayed parturition occurred in rats. Administration of PediaProfen is not recommended during pregnancy.

**ADVERSE REACTIONS:** The most frequent type of adverse reaction occurring with ibuprofen is gastrointestinal. In controlled clinical trials, the percentage of adult patients reporting one or more gastrointestinal complaints ranged from 4% to 16%.

Adverse reactions occurring in 3% to 9% of patients treated with ibuprofen: nausea, epigastric pain, heartburn, dizziness, rash. Adverse reactions occurring in 1% to 3% of patients: diarrhea, abdominal distress, nausea and vomiting, indigestion, constipation, abdominal cramps or pain, fullness of GI tract, headache, nervousness, pruritus, tinnitus, decreased appetite, edema, fluid retention (generally responds promptly to drug discontinuation). Still other reactions (less than 1 in 100) have been reported, and are detailed in the full summary of prescribing information.

**DOSAGE AND ADMINISTRATION: Shake well prior to administration.**

**Fever Reduction in Children 6 months to 12 years of age:** Dosage should be adjusted on the basis of the initial temperature level (See CLINICAL PHARMACOLOGY for a description of the controlled clinical trial results). The recommended dose is 5 mg/kg if the baseline temperature is less than 102.5°F or 10 mg/kg if the baseline temperature is greater than 102.5°F. The duration of fever reduction is generally 6-8 hours and is longer with the higher dose. The recommended maximum daily dose is 40 mg/kg.

**Mild to moderate pain:** 400 mg every 4 to 6 hours as necessary for the relief of pain in adults.

In controlled analgesic clinical trials, doses of ibuprofen greater than 400 mg were no more effective than 400 mg dose.

**HOW SUPPLIED: PediaProfen** Ibuprofen Suspension 100 mg/5 ml (teaspoon) —

orange, berry-vanilla flavored

Bottles of 4 oz (120 ml) ..... NDC 0045-0469-04

Bottles of 16 oz (480 ml) ..... NDC 0045-0469-16

**SHAKE WELL BEFORE USING.** Store at room temperature.

**Caution:** Federal law prohibits dispensing without prescription.

# New England

A premier five (5) doctor, fee-for-service, private group practice seeks BC/BE Pediatrician as associate leading to partnership. Subspecialty interests are encouraged. This busy group has a strong academic affiliation, which offers the opportunity to teach medical students and residents. The call schedule is split evenly among the group; and there is no call for C-sections. A Level III nursery is available at the hospital. This practice is approximately one hour from Boston, with affordable housing and good schools. Conveniently located near several universities and offers a variety of cultural and recreational activities. Excellent salary and benefits package. **Send C.V. or call**

**Wayne G. Grodsky, The Health Care Group, 140 W. Germantown Pike, Suite 200, Plymouth Meeting, PA 19462. (800) 441-0737, in PA (215) 828-3888.**

**NEW HAMPSHIRE**—Immediate opportunity for dynamic BC/BE pediatrician to join our busy four-physician practice in southern New Hampshire. Forty-five minutes to Boston. Respond to Box #089014.

**PEDIATRICIAN, FULL OR PART-TIME** salaried position in new pediatric health center 30 miles from Boston. Unique location offers access to the ocean and ski resorts galore. Excellent benefits, ample coverage, and \$80,000.00 salary plus \$1,000.00 on call stipend. World renowned private schools, excellent public schools and a mix of urban and suburban life styles. Contact in confidence: Cheryl Broderick, E.G. Todd Assoc, 790 Turnpike St, Ste 202, North Andover, MA 01845. 1-800-762-9213.

**CONNECTICUT**—BC/BE pediatrician to join an established solo practice in Enfield, Connecticut. Pleasant working conditions with a physician assistant with excellent opportunity. Reply to Box #089007.

**PENNSYLVANIA**—BC/BE pediatrician to join well-established, four-person pediatric practice in southeastern Pennsylvania - located in the suburbs of Reading and in close proximity to Philadelphia. Lovely community, three colleges, and excellent public schools. Income and benefit package include opportunity for full partnership within three years. Position available now. Send CV to: Mauro Paolini, MD, 1981 Bern RD, Wyomissing, PA 19610.

**PEDIATRIC HEMATOLOGY/ONCOLOGY DIRECTOR**—The Children's Medical Center of SUNY Health Science Center at Brooklyn is looking for a Director of pediatric hematology/oncology. The university is also in charge of Kings County Hospital, with a large inpatient and outpatient service in general hematology, hemoglobinopathies, newborns, and oncology patients. Two Board certified hematologists are on staff with additional ancillary services. Respond to: Senih Fikrig, MD, Chairman of the Committee, CMCB, Box #49, SUNY Health Science Center at Brooklyn, 450 Clarkson Ave, Brooklyn, NY 11203.

**PENNSYLVANIA**—BC/BE pediatrician to join extremely busy pediatric group in scenic Pocono mountain community. Convenient to skiing, hiking, and outdoor activities. Partnership potential and appointment as Associate Director of Pediatrics at hospital. Excellent schools. Competitive salary & benefits package. Approximately 2 hours to Philadelphia and New York City. Send CV to: Wayne G. Grodsky, The Health Care Group, 140 W Germantown Pike, Ste 200, Plymouth Meeting, PA 19462 or call 1-800-441-737, in PA call (215) 828-3888.

**NEW ENGLAND**—The Fallon Clinic, an established physician owned and directed multispecialty group practice, seeks two BC/BE pediatricians for expanding offices in Worcester, Massachusetts. Teaching opportunities are available at nearby medical school. Attractive on call schedule, competitive income and excellent benefits are offered. Send CV to: Medical Director, Fallon Clinic, Inc, 630 Plantation St, Worcester, MA 01605.

**FIVE YOUNG PEDIATRICIANS providing high quality care, seeking BC/BE associate with similar interest. Growing suburban area sixty miles northwest of New York City. Mail CV to Box #089006.**

**MASSACHUSETTS, BC/BE PEDIATRICIAN** to join energetic, well respected five-physician practice in urban community 25 miles north of Boston. Position available immediately. Location includes on site laboratory, immediate proximity to hospital with major pediatric services. Excellent salary and benefit package. Subspecialty interest or training welcomed. Reply to Box #089015.

## Group Practice Opportunities Boston Area

Group Practice positions are available in several of our affiliated Medical Groups for BC/BE Pediatricians. We offer an ideal opportunity to join a practice that provides high quality personal care while leaving the burdensome business responsibilities behind.

Openings exist in various communities in and around the Boston area. These multispecialty medical groups, affiliated with Harvard Community Health Plan, place a strong emphasis on supporting the physician in a way that allows him or her to deliver high quality care in a collegial environment to both HMO and fee-for-service patients. Variable salary, benefits and partnership packages are offered, all at highly competitive rates.

Exceptional lifestyle advantages accompany these excellent opportunities: easy access to Boston's diverse cultural, historical, and education activities; close proximity to the White Mountains of New Hampshire, the Berkshires of western Massachusetts and the best of New England's beaches.

**For more details concerning these superb practice options, please call or send your curriculum vitae to:**

RHODE ISLAND HOSPITAL is seeking to fill a position in its Division of Pediatric Gastroenterology and Nutrition, starting September 1, 1990, or as soon as the position can be filled. The successful candidate must qualify for a full-time medical faculty position in the Department of Pediatrics of the Brown University Program in Medicine at the rank of Assistant Professor. The successful candidate must be Board certified in pediatrics and be eligible for certification in pediatric gastroenterology and nutrition, as well as having demonstrated abilities in research. Responsibilities will include: outpatient services in pediatric gastroenterology and nutrition, inpatient consultations, and gastroenterology procedures. This academic position includes teaching, clinical care, and research, and will provide protected time and start up funding for the research. Applications are requested immediately and will remain open until the position is filled. Screening will begin on that date and continue until a successful candidate has been identified or the search is closed. Rhode Island Hospital is an Affirmative Action/Equal Opportunity Employer and actively solicits applications from minority and protected groups. Interested individuals should send their application with curriculum vitae to: Joel W. Adelson, MD, PhD, Director, Division of Pediatric GI & Nutrition (SWP-5), Dept of Pediatrics, Rhode Island Hospital, 593 Eddy St, Providence, RI 02903. (401) 277-8306.

# Almost Perfect.

Over a decade ago, KRON created a new job role that is so close to "perfect" that physicians who haven't tried it still think it's too good to be true.

As a member of our locum tenens group, you work as much as you want, when you want. Choose a coastal community or mountain setting, a solo practice or large group. KRON gives you the places and professional settings YOU prefer.

And when you're ready for a permanent commitment, our Trial Practice Plan helps you network into the perfect position.

KRON is physician owned, so professional values always take precedence over business imperatives. That's why KRON Medical is the Gold Standard in locum tenens.

The Gold Standard In Locum Tenens  
The KRON Building, 725 Airport Rd.  
Chapel Hill, NC 27514 919-968-4881

## Pediatric Subspecialists

The University of South Dakota School of Medicine currently has openings for the following BE/BC pediatric subspecialties:

<b>Cardiology</b>	<b>Neurology</b>
<b>Pulmonology</b>	<b>Surgery</b>
<b>Hematology/Oncology</b>	<b>Neonatology</b>
<b>Intensivist</b>	<b>Infectious Disease</b>

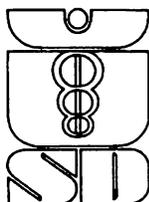

These are full-time academic positions ideally suited for the clinician scholar who wishes to develop and guide a program which will have a significant impact on the healthcare of children. Although our program is heavily slanted toward medical student education and patient care, the department encourages and provides ample resources for clinical and laboratory research.

Sioux Falls is located in the geographic center of America with friendly people who exemplify traditional midwestern values. Our community has a strong economic base, growing population and a progressive educational system. Included in David Franks' book, *America's Fifty Safest Cities*, Sioux Falls also offers numerous cultural opportunities. South Dakota's four season climate welcomes endless recreational activities year-round.

**Competitive financial packages offered. EOAAE.**

Send CV or call:  
Carl Hinson • (800) 468-3333

**USD School of Medicine**  
1100 South Euclid, P.O. Box 5039  
Sioux Falls, SD 57117

□

**MISSOURI**—Progressive hospital in southwest Missouri seeks qualified **pediatric intensivist/director PICU**. Excellent facilities include 52-bed Level III NICU, six-bed PICU, Level II Trauma Center. Service area one million. Great living environment. Attractive compensation. **Contact: Rebecca Turley, 1-800-338-7107.**

□

**GROUP HEALTH ASSOCIATES, INC.** is a multispecialty medical group with six offices throughout greater Cincinnati. Continued growth and expansion causes us to begin now our search for additional Board certified/Board eligible pediatricians to join our staff, July 1991. Our group has a strong diversified mix of private pay and managed care patients. Our practice environment frees physicians from the business burdens of practice management. Our compensation package is flexible; dependent upon how busy of a practice a physician would like. Our fringe benefits are generous, allowing more than ample time for CME and vacation, and providing more than the basic insurance needs. If you are interested in surrounding yourself with well trained colleagues in an atmosphere of collegiality, forward your CV to: Search Committee, GHA, 2915 Clifton Ave, Cincinnati, OH 45220.

**PEDIATRICIAN WANTED**—Group Health Cooperative, a progressive and growing staff model HMO in a city of 60,000 in west central Wisconsin, is presently recruiting another pediatrician. Very competitive salary with excellent fringe benefits. Practice high quality primary care in a most desirable location. Send CV to: Stuart R. Lancer, MD, Medical Director, Group Health Cooperative, PO Box 3217, Eau Claire, WI 54702. (715) 836-8552.

□

**GROWING PEDIATRIC PRACTICE**—Northwest suburbs, Chicago. **PT/full-time BC/BE pediatrician - afternoons and evenings. Competitive salary and compensation package. CV to: Mary Weiden, Ste 200, 241 Golf Mill Center, Niles, IL 60648.**

□

**PEDIATRIC PARTNERSHIP OPPORTUNITY**—Take over pediatric practice with immediate patient load. Newly remodeled office space with full-time support staff of four, including experienced pediatric physician's assistant. Enjoy time off with secondary call schedule. Nearby Omaha offers big city amenities. Generous salary plus bonus and benefits for two years, then partnership. Send CV or call: Cheryl Bschor, Jackson and Coker, 115 Perimeter Center Pl, Ste 380, PDO, Atlanta, GA 30346. 1-800-544-1987.

□

**TRAVERSE CITY, MICHIGAN**—Third BC/BE pediatrician to join growing, established practice. Regional Level II½ Nursery and PICU. Four season recreational, cultural opportunities. Salary leading to partnership. Contact: Michael Eldredge, MD, 1100 Sixth St, Traverse City, MI 49684.

□

**THE PERMANENTE MEDICAL GROUP  
NORTHERN CALIFORNIA**

**QUALITY**

The Permanente Medical Group, the largest multispecialty group practice in the U.S., is undergoing explosive growth in its Northern California region: the San Francisco Bay Area, Sacramento and the Central Valley. Our rapid increase in membership has created practice opportunities throughout the region for additional BC/BE Pediatricians.

**STABILITY**

**LEADERSHIP**

Our physician-managed group is part of the comprehensive Kaiser Permanente Medical Care Program. As a TPMG physician, you have access to the latest medical technology and resources, the support of colleagues in all subspecialties — and the opportunity to provide excellent health care without the burdens of managing a practice.

**GROWTH**

**SUPPORT**

TPMG offers many benefits: scheduled time off with cross-coverage provided by your colleagues, malpractice insurance, a substantial retirement program and special arrangements for physicians transferring from established practice.

**REWARDS**

Please call or send CV to: The Permanente Medical Group, Inc., Richmond Prescott, M.D., Physician Recruitment Services, Dept. PED-7187, 1814 Franklin, 4th Floor, Oakland, CA 94612. (800)777-4912. EOE

**HONOLULU, HAWAII**—BC/BE pediatrician to join internists (two) and OB/GYN at established satellite facility in suburban community. The department of pediatrics has eight members and is part of a 140-physician multispecialty group practice. Salary first year with comprehensive fringe benefits, opportunity for equity participation after two-year associate period. Combine the advantages of group practice with the world's best climate and cultural diversity. For more information, please call or write: Alan B. Hawk, MD, Medical Director, Straub Clinic & Hospital, 888 S King St, Honolulu, HI 96813. (808) 522-4106. Fax: (808) 522-4111.

**CALIFORNIA/SAN DIEGO COUNTY**—BC pediatrician seeking part or full-time BC/BE pediatrician. Rapidly growing practice in ideal rural community. Call shared with other local pediatricians. Send CV to: C.P. Taft, MD, 593 E Elder St, Ste B, Fallbrook, CA 92028.

# The Playtex® Baby Nurser— Proven better than bottles

Significantly “less vomiting” than  
with “a standard glass bottle.”<sup>1</sup>

Its collapsible sac contracts like a breast to deliver milk—not air. So babies swallow less air, develop less gas.<sup>2</sup> And, as proven in a clinical comparative study, the PLAYTEX Nurser actually causes less spitting up and significantly less vomiting than “standard glass bottles”<sup>1</sup>—so babies stay happier, and more comfortable.

“More physiologic feeding”<sup>1</sup>—Less spitting up, to help  
smooth the transition from the breast.

With its special collapsible nurser design and Natural Action® nipple that’s shaped  
like mother’s, the PLAYTEX Nurser is closest to breastfeeding.

So for an easier adjustment—for both mother and baby, during supplementation or  
weaning—recommend the best: recommend the PLAYTEX Baby Nurser.

for less spitting up, less regurgitation.<sup>1</sup>
