Division Head Pediatric Hematology/ Oncology

Sinai Hospital of Baltimore is seeking a board-certified Pediatric Hematologist/Oncologist to be a head of a well-established division in a busy university-affiliated community hospital. The division has three trained Pediatric Hematologist/ Oncologists, two nurses, a research associate and a social worker. A newly renovated outpatient area, including a hematology laboratory and offices for the division, was opened in 1992. Sinai has a fully accredited resident training program and a large full time faculty. We are seeking an individual with in interest in resident teaching and in the expansion of the present services. Opportunities for investigative research are available and strongly encouraged. For further information about this excellent opportunity, please contact or send your curriculum vitae to:

Allen D. Schwartz, M.D.
Chairman, Department of Pediatrics
Sinai Hospital of Baltimore
2401 W. Belvedere Avenue
Baltimore, MD 21215

ROSS LABORATORIES
COLUMBUS, OHIO 43216
Division of Abbott Laboratories, USA

LITHO IN USA

BRIEF SUMMARY: Please see package insert for full prescribing information.

SURVANTA® (1040)

beractant

intratracheal suspension

Sterile Suspension/For Intratracheal Use Only

INDICATIONS AND USAGE

SURVANTA is indicated for prevention and treatment ("rescue") of Respiratory Distress Syndrome (RDS) (hyaline membrane disease) in premature infants. SURVANTA significantly reduces the incidence of RDS, mortality due to RDS and air leak complications.

Prevention

In premature infants less than 1250 g birth weight or with evidence of surfactant deficiency, give SURVANTA as soon as possible, preferably within 15 minutes of birth.

Rescue

To treat infants with RDS confirmed by x-ray and requiring mechanical ventilation, give SURVANTA as soon as possible, preferably by 8 hours of age.

CONTRAINDICATIONS

None known.

WARNINGS

SURVANTA is intended for intratracheal use only.

SURVANTA CAN RAPIDLY AFFECT OXYGENATION AND LUNG COMPLIANCE. Therefore, its use should be restricted to a highly supervised clinical setting with immediate availability of clinicians experienced with intubation, ventilator management, and general care of premature infants. Infants receiving SURVANTA should be frequently monitored with arterial or transcutaneous measurement of systemic oxygen and carbon dioxide.

DURING THE DOSING PROCEDURE, TRANSIENT EPISODES OF BRADYCARDIA AND DECREASED OXYGEN SATURATION HAVE BEEN REPORTED. If these occur, stop the dosing procedure and initiate appropriate measures to alleviate the condition. After stabilization, resume the dosing procedure.

PRECAUTIONS

General

Rales and moist breath sounds can occur transiently after administration. Endotracheal suctioning or other remedial action is not necessary unless clear-cut signs of airway obstruction are present.

Increased probability of post-treatment nosocomial sepsis in SURVANTA-treated infants was observed in the controlled clinical trials (Table 3). The increased risk for sepsis among SURVANTA-treated infants was not associated with increased mortality among these infants. The causative organisms were similar in treated and control infants. There was no significant difference between groups in the rate of post-treatment infections other than sepsis.

Use of SURVANTA in infants less than 600 g birth weight or greater than 1750 g birth weight has not been evaluated in controlled trials. There is no controlled experience with use of SURVANTA in conjunction with experimental therapies for RDS (eg, high-frequency ventilation or extracorporeal membrane oxygenation).

No information is available on the effects of doses other than 100 mg phospholipids/kg, more than four doses, dosing more frequently than every 6 hours, or administration after 48 hours of age.

Carcinogenesis, Mutagenesis, Impairment of Fertility

Reproduction studies in animals have not been completed. Mutagenicity studies were negative. Carcinogenicity studies have not been performed with SURVANTA.

ADVERSE REACTIONS

The most commonly reported adverse experiences were associated with the dosing procedure. In the multiple-dose controlled clinical trials, transient bradycardia occurred with 11.9% of *doses*. Oxygen desaturation occurred with 9.8% of *doses*.

Other reactions during the dosing procedure occurred with fewer than 1% of doses and included endotracheal tube reflux, pallor, vasoconstriction, hypotension, endotracheal tube blockage, hypertension, hypocarbia, hypercarbia, and apnea. No deaths occurred during the dosing procedure, and all reactions resolved with symptomatic treatment.

The occurrence of concurrent illnesses common in premature infants was evaluated in the controlled trials. The rates in all controlled studies are in Table 3.

TABLE 3

	All Controlled Studies		
Concurrent Event	SURVANTA (%)	Control (%)	P-Value[a]
Patent ductus arteriosus	46.9	47.1	0.814
Intracranial hemorrhage	48.1	45.2	0.241
Severe intracranial hemorrhage	24.1	23.3	0.693
Pulmonary air leaks	10.9	24.7	<0.001
Pulmonary interstitial emphysema	20.2	38.4	<0.001
Necrotizing enterocolitis	6.1	5.3	0.427
Apnea	65.4	59.6	0.283
Severe apnea	46.1	42.5	0.114
Post-treatment sepsis	20.7	16.1	0.019
Post-treatment infection	10.2	9.1	0.345
Pulmonary hemorrhage	7.2	5.3	0.166

[a]P-value comparing groups in controlled studies

When all controlled studies were pooled, there was no difference in intracranial hemorrhage. However, in one of the single-dose rescue studies and one of the multiple-dose prevention studies, the rate of intracranial hemorrhage was significantly higher in SURVANTA patients than control patients (63.3% *v* 30.8%, $P=0.001$; and 48.8% *v* 34.2%, $P=0.047$, respectively). The rate in a Treatment IND involving approximately 4400 infants was lower than in the controlled trials.

In the controlled clinical trials, there was no effect of SURVANTA on results of common laboratory tests: white blood cell count and serum sodium, potassium, bilirubin, creatinine.

More than 3700 pretreatment and post-treatment serum samples were tested by Western Blot immunoassay for antibodies to surfactant-associated proteins SP-B and SP-C. No IgG or IgM antibodies were detected.

Several other complications are known to occur in premature infants. The following conditions were reported in the controlled clinical studies. The rates of the complications were not different in treated and control infants, and none of the complications were attributed to SURVANTA.

Respiratory: lung consolidation, blood from the endotracheal tube, deterioration after weaning, respiratory decompensation, subglottic stenosis, paralyzed diaphragm, respiratory failure.

Cardiovascular: hypotension, hypertension, tachycardia, ventricular tachycardia, aortic thrombosis, cardiac failure, cardiorespiratory arrest, increased apical pulse, persistent fetal circulation, air embolism, total anomalous pulmonary venous return.

Gastrointestinal: abdominal distention, hemorrhage, intestinal perforations, volvulus, bowel infarct, feeding intolerance, hepatic failure, stress ulcer.

Renal: renal failure, hematuria.

Hematologic: coagulopathy, thrombocytopenia, disseminated intravascular coagulation.

Central Nervous System: seizures.

Endocrine/Metabolic: adrenal hemorrhage, inappropriate ADH secretion, hyperphosphatemia.

Musculoskeletal: inguinal hernia.

Systemic: fever, deterioration.

Follow-Up Evaluations

To date, no long-term complications or sequelae of SURVANTA therapy have been found.

Single-Dose Studies

Six-month adjusted-age follow-up evaluations of 232 infants (115 treated) demonstrated no clinically important differences between treatment groups in pulmonary and neurologic sequelae, incidence or severity of retinopathy of prematurity, rehospitalizations, growth, or allergic manifestations.

Multiple-Dose Studies

Six-month adjusted age follow-up evaluations have not been completed. Preliminarily, in 605 (333 treated) of 916 surviving infants, there are trends for decreased cerebral palsy and need for supplemental oxygen in SURVANTA infants. Wheezing at the time of examination tended to be more frequent among SURVANTA infants, although there was no difference in bronchodilator therapy.

Twelve-month follow-up data from the multiple-dose studies have been completed in 328 (171 treated) of 909 surviving infants. To date no significant differences between treatments have been found, although there is a trend toward less wheezing in SURVANTA infants in contrast to the six month results.

OVERDOSAGE

Overdosage with SURVANTA has not been reported. Based on animal data, overdosage might result in acute airway obstruction. Treatment should be symptomatic and supportive.

Rales and moist breath sounds can transiently occur after SURVANTA is given, and do not indicate overdosage. Endotracheal suctioning or other remedial action is not required unless clear-cut signs of airway obstruction are present.

HOW SUPPLIED

SURVANTA (beractant) Intratracheal Suspension is supplied in single-use glass vials containing 8 mL of SURVANTA (NDC 0074-1040-08). Each milliliter contains 25 mg of phospholipids (200 mg phospholipids/8 mL) suspended in 0.9% sodium chloride solution. The color is off-white to light brown.

Store unopened vials at refrigeration temperature (2-8°C). Protect from light. Store vials in carton until ready for use. Vials are for single use only. Upon opening, discard unused drug.

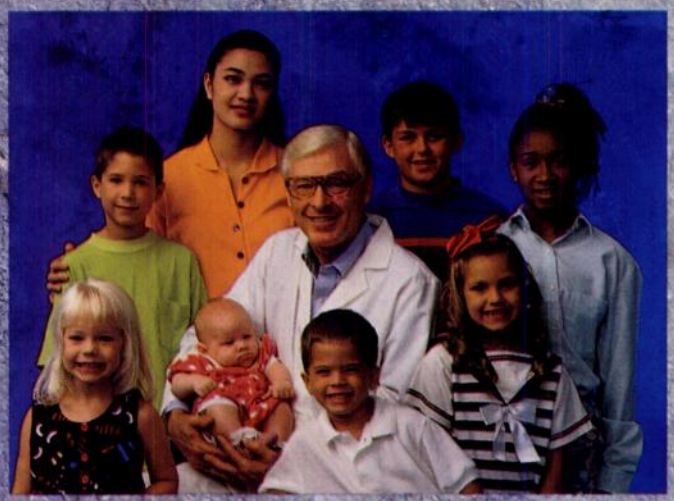
Poliovirus Vaccine Live Oral Trivalent

Always There for You

- The **ONE** with proven US experience — a 30-year record of safety* and efficacy. ORIMUNE, in partnership with the medical community, has virtually eliminated wild polio in the United States
- The **ONE** that's been there for 30 years — Lederle has provided an uninterrupted supply of oral polio vaccine for America's children
- The **ONE** with the convenient, single-dose DISPETTE®

*Paralytic disease following ingestion of live poliovirus vaccines has been reported on rare occasions in individuals receiving the vaccine or in their close contacts.



Please see brief summary of full Prescribing Information.

Brief Summary

Poliovirus Vaccine
Live Oral Trivalent
ORIMUNE®

Please see package insert for full description, directions for use, and references.

INDICATIONS

For prevention of poliomyelitis caused by Poliovirus Types 1, 2, and 3.

CONTRAINDICATIONS

Under no circumstances should this vaccine be administered parenterally.

Administration of the vaccine should be postponed or avoided in those experiencing any acute illness and in those with any advanced debilitated condition or persistent vomiting or diarrhea.

ORIMUNE *must not* be administered to patients with immune deficiency diseases such as combined immunodeficiency, hypogammaglobulinemia, and agammaglobulinemia. Further, ORIMUNE *must not* be administered to patients with altered immune states, such as those occurring in human immunodeficiency virus (HIV) infection, thymic abnormalities, leukemia, lymphoma, generalized malignancy or advanced debilitating conditions, or by lowered resistance from therapy with corticosteroids, alkylating drugs, antimetabolites, or radiation. ORIMUNE should also not be given to members of a household in which there is a family history of immunodeficiency until the immune status of all members is determined to be normal. All persons with altered immune status should avoid close household-type contact with recipients of the vaccine for at least six to eight weeks. Inactivated poliovirus vaccine (IPV) is preferred for immunizing all persons in the above described circumstances.

WARNINGS

Under no circumstances should this vaccine be administered parenterally.

Administration of the vaccine should be postponed or avoided in those experiencing any febrile illness or acute infection and in those with any advanced debilitated condition or persistent vomiting or diarrhea, or suspected gastroenteritis infection.

Other viruses (including poliovirus and other enteroviruses) may compromise the desired response to this vaccine, since their presence in the intestinal tract may interfere with the replication of the attenuated strains of poliovirus in the vaccine.

PRECAUTIONS

The vaccine is not effective in modifying or preventing cases of existing and/or incubating poliomyelitis. **Records Required by the National Childhood Vaccine Injury Act:** Manufacturer and lot number of vaccine administered must be recorded by health care provider in vaccine recipient's permanent record, along with date of administration and name, address, and title of person administering vaccine.

Health care provider must report to a health department or to the FDA the occurrence following immunization of any event set forth in the Vaccine Injury Table including: paralytic poliomyelitis–in a nonimmunodeficient recipient within 30 days of vaccination–in an immunodeficient recipient within 6 months of vaccination; any vaccine-associated community case of paralytic poliomyelitis; or any acute complication or sequela (including death) of above events.

Use in Pregnancy: *Pregnancy Category C:* Animal reproduction studies have not been conducted with Poliovirus Vaccine Live Oral Trivalent. It is also not known whether OPV can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. Although there is no convincing evidence documenting adverse effects of either OPV or IPV on the developing fetus or pregnant woman, it is prudent on theoretical grounds to avoid vaccinating pregnant women. However, if immediate protection against poliomyelitis is needed, OPV is recommended. (See **CONTRAINDICATIONS** and **ADVERSE REACTIONS**.)

ADVERSE REACTIONS

Paralytic disease following the ingestion of live poliovirus vaccines has been, on rare occasion, reported in individuals receiving the vaccine (see, for example, CONTRAINDICATIONS), and in persons who were in close contact with vaccinees. The vaccine viruses are shed in the vaccinee's stools for at least six to eight weeks as well as via the pharyngeal route. Most reports of paralytic disease following ingestion of the vaccine or contact with a recent vaccinee are based on epidemiological analysis and temporal association between vaccination or contact and the onset of symptoms. Most authorities believe that a causal relationship exists. A large retrospective study suggests that OPV may be temporally associated with Guillain-Barré syndrome. A causal relationship has not been established. Prior to administration of the vaccine, the attending physician should warn or specifically direct personnel acting under his authority to convey the warnings to the vaccinee, parent, guardian, or other responsible person of the possibility of vaccine-associated paralysis, particularly to susceptible family members and other close personal contacts.

The Centers for Disease Control report that during the years 1973 through 1984 approximately 274.1 million OPV doses were distributed in the US. During this same period, 105 vaccine-associated cases were reported (1 case per 2.6 million doses distributed). Of these 105 cases, 35 occurred in vaccine recipients (1 case per 7.8 million doses distributed), 50 occurred in household and nonhousehold contacts of vaccinees (1 case per 5.5 million doses distributed), 14 occurred in immunodeficient recipients or contacts, and 6 occurred in persons with no history of vaccine exposure, from whom vaccine-like viruses were isolated.

Thirty-three (94%) of the recipient cases, 41 (82%) of the contact cases, and 5 (36%) of the immune deficient cases were associated with the recipient's first dose of OPV. Because most cases of vaccine-associated paralysis have occurred in association with the first dose, the CDC has estimated the likelihood of paralysis in association with first v subsequent doses of OPV, using the number of births during 1973-1984 to estimate the number of first doses distributed, and subtracting this from the total distribution to estimate the number of subsequent doses distributed. This method estimates a frequency of paralysis for recipients of 1 case per 1.2 million first doses v one case per 116.5 million subsequent doses; for contacts, one case per 1 million first doses v one case per 25.9 million subsequent doses; with an overall frequency of 1 case per 520,000 first doses v 1 case per 12.3 million subsequent doses.

Other methods of estimating the likelihood of paralysis in association with OPV have been described. Because the number of susceptible vaccine recipients or contacts of recipients is not known, the true risk of vaccine-associated poliomyelitis is impossible to determine precisely.

When the attenuated vaccine strains are to be introduced into a household with adults who have not been adequately vaccinated or whose immune status cannot be determined, the risk of vaccine-associated paralysis can be reduced by giving these adults 2 doses of enhanced potency IPV a month apart before the children receive ORIMUNE. The children may receive the first dose of ORIMUNE at the same visit that the adult receives the second dose of enhanced potency IPV. A booster dose of enhanced potency IPV can be given to partially immunized adults at the same visit that the first dose of OPV is given to the child. The adult should be informed of precautions, such as handwashing after changing diapers.

The ACIP states: "Because of the overriding importance of ensuring prompt and complete immunization of the child and the extreme rarity of OPV-associated disease in contacts, the Committee recommends the administration of OPV to a child regardless of the poliovirus-vaccine status of adult household contacts. This is the usual practice in the United States. The responsible adult should be informed of the small risk involved. An acceptable alternative, if there is a strong assurance that ultimate, full immunization of the child will not be jeopardized or unduly delayed, is to immunize adults...[with IPV]... before giving OPV to the child."

The American Academy of Pediatrics and the American College of Physicians have made similar recommendations.

The College of Physicians & Surgeons

BABIES HOSPITAL - COLUMBIA-PRESBYTERIAN MEDICAL CENTER

Present

CURRENT PROBLEMS & TREATMENTS IN PEDIATRIC OTOLARYNGOLOGY

Saturday, May 8, 1993

at the Columbia-Presbyterian Medical Center, New York, New York

Approved for 4 Credit Hours in Category 1, A.M.A.'s Physician's Recognition Award.
Tuition: Physicians: $75; Residents & Fellows in Training: $50
Tuition fee includes a syllabus, continental breakfast and refreshments.

Conference Director: **JOSEPH HADDAD JR., M.D.**

The Faculty of the College of Physicians & Surgeons will be joined by the following guest lecturer:

ROLAND D. EAVEY, M.D.

The pediatrician, family practitioner, and otolaryngologist are often confronted with children who seem to have multiple causes for ear and nose problems. These may include congenital anatomic problems, infection and allergy; sorting out these diverse problems can be a great challenge. In addition, these local conditions can have systemic manifestations, as when upper airway disease exacerbates problems in the lower airway. The conference this year will focus on ways to evaluate and treat these conditions. The audience will have the opportunity to discuss with the faculty these and other issues which arise in their daily medical practice.

Contact: Center for Continuing Education, 630 West 168th Street, Unit 39, NY, NY 10032; Telephone: (212) 781-5990

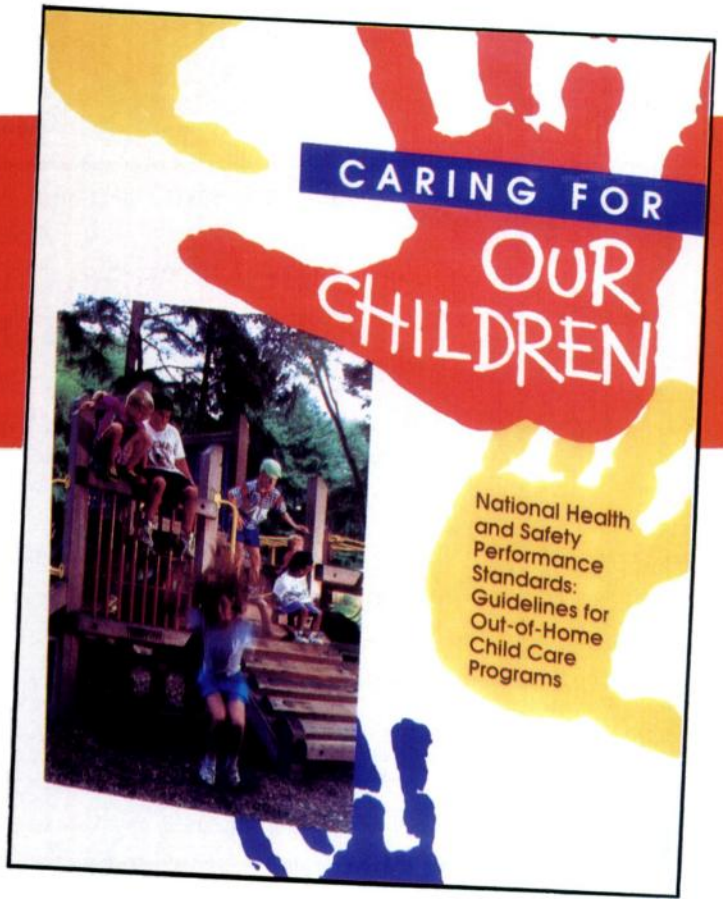
Out-of-Home Child Care Goals and Guidelines to Help You Create a Healthy, Nurturing Environment



Caring For Our Children is a valuable new resource in out-of-home child care and a must for your reference library. This first-ever publication contains a complete set of national standards for the development and evaluation of health and safety performance for out-of-home child care.

Topics covered include recommendations for child:staff ratio and group size, recognition and control of Hepatitis B virus infection, the role of health consultants in special facilities for ill children, administrative policies of HIV infection, environmental safeguards, services for children with special needs, and adequate salaries and benefits for day-care and child care staff.

Developed jointly by the American Academy of Pediatrics and the American Public Health Association, this 410-page manual is available for only $50, plus $5.95 shipping and handling. We are convinced that *Caring For Our Children* will be among the most referred to in your collection. If, for any reason, you are not completely satisfied with your purchase, simply return it to us within 30 days for a full refund or credit.

Act today and let this landmark book provide the on-the-job reference you need to deliver the best in quality child care.

TYLENOL® First...

BECAUSE IT WORKS AGAINST PAIN!

EFFICACY

Rapid onset of action—no children's analgesic is faster[1] or more effective for mild-to-moderate pain[2-4]

Proven clinically effective in a wide range of pain models[2,5]

- —Sprains and strains
- —Contusions, bruises, abrasions
- —Tonsillectomy[6]
- —Oral surgery[1,7,8]
- —Headache[1,9]
- —Immunization[10]
- —Minor burns
- —Tonsillitis and pharyngitis[4]

SAFETY

☐ Superior GI safety profile to aspirin and even ibuprofen[11]

MOST FORMS AND FLAVORS

☐ Infant Drops, Elixir, Caplets, and Chewable Tablets—for children of every age and weight

Children's and Junior Strength

TYLENOL®

acetaminophen

Your first choice because it works

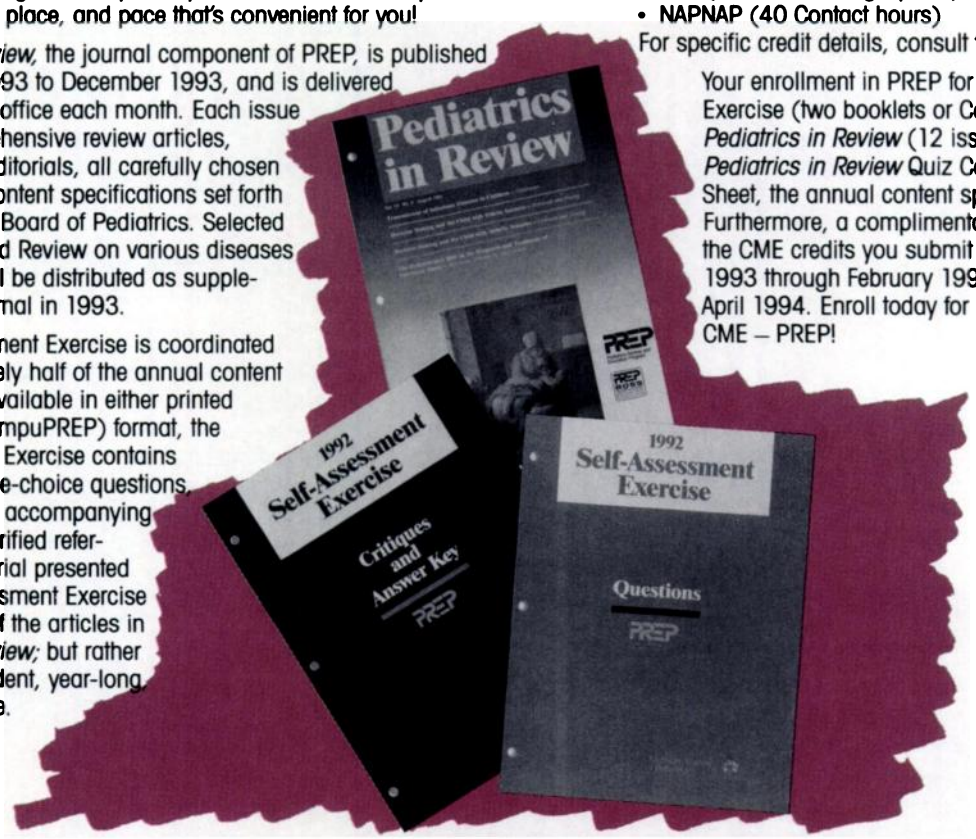
There's a comprehensive CME program that lets you study at your convenience – it's PREP

PREP, Pediatrics Review and Education Program, is the integrated program of continuing education in pediatric medicine of the American Academy of Pediatrics. The content of the two components of PREP, *Pediatrics in Review* and the Self-Assessment Exercise, are based primarily on content specifications covering the entire pediatric field. Most of all, PREP goes with you to your home or office so you can choose the time, place, and pace that's convenient for you!

Pediatrics in Review, the journal component of PREP, is published from January 1993 to December 1993, and is delivered to your home or office each month. Each issue contains comprehensive review articles, abstracts, and editorials, all carefully chosen to address the content specifications set forth by the American Board of Pediatrics. Selected Guides for Record Review on various diseases or conditions will be distributed as supplements to the journal in 1993.

The Self-Assessment Exercise is coordinated with approximately half of the annual content specifications. Available in either printed or computer (CompuPREP) format, the Self-Assessment Exercise contains over 300 multiple-choice questions, correct answers, accompanying critiques, and verified references. The material presented in the Self-Assessment Exercise is not a review of the articles in *Pediatrics in Review*; but rather its own independent, year-long learning resource.



Completion of the PREP program meets the criteria for 40 hours of credit toward the AAP PREP Education Award. Other organizations granting credit include:

- AMA (40 hours, Category 1)
- AAFP (40 Prescribed hours)
- AOA (28 hours, Category 2-B)
- NAPNAP (40 Contact hours)

For specific credit details, consult these groups directly.

Your enrollment in PREP for 1993 includes the Self-Assessment Exercise (two booklets or CompuPREP) and a subscription to *Pediatrics in Review* (12 issues), Guides for Record Review, *Pediatrics in Review* Quiz Card, Self-Assessment Credit Reply Sheet, the annual content specifications booklet, and a binder. Furthermore, a complimentary CME credit transcript identifying the CME credits you submit to the PREP office, from January 1993 through February 1994, will be provided in approximately April 1994. Enroll today for comprehensive and convenient CME – PREP!

PEDIATRICS

Classified Advertisement

Your advertisement in the Classifed Section of Pediatrics will reach more than 53,000 child health care professionals each month. This circulation includes more than 85% of all Board certified pediatricians, over 90% of all certified pediatric allergists, cardiologists, and surgeons and 7000 pediatric residents. An average of 12 responses is received for each ad run three times or more, with box service.

RATES

30 words or less—1 time, $120.00, 3 times or more, $100.00 each time. Each word over 30, $1.50 each time, Bold face or italics, $20.00 one time charge. Blind box charge, $25.00 each time. Boxed ad, $80.00 one time charge. Note: Initials or abbreviations equal 1 word. Telephone numbers with area code equals one word.

TERMS

Payment must accompany order. Make checks payable to American Academy of Pediatrics. Advertisers may cancel ad without refund.

DEADLINE

1st of each month, two months preceding issue (Jan 1 for March issue). Please submit ad copy typed. No telephone orders will be accepted. Handwritten ad copy is not acceptable.

To place an ad, please send your order with payment to: **American Academy of Pediatrics, Pediatrics Classified, PO Box 927, Elk Grove Village, IL 60009-0927.**

To reply to an ad use the following address: **Pediatrics Classified, Blind Box #, American Academy of Pediatrics, PO Box 927, Elk Grove Village, IL 60009-0927.**

OPPORTUNITIES—*National*

You'll love working with our locum tenens physicians and allied health care professionals.

WE GUARANTEE IT.

CompHealth has thoroughly credentialed physicians and allied health care providers from more than 40 fields of specialization available to provide locum tenens, or temporary, staffing assistance when and where you need it.

Plus, we have the standards and experience to guarantee your satisfaction each time we place a member of our medical staff in your practice or facility. It's the closest thing you'll find to a risk-free way to cover for absent staff members, "try out" a potential new recruit, or take care of your patients while you search for a new full-time associate.

Call us today to arrange for quality locum tenens coverage, or to discuss your permanent recruiting needs.

BC/BE PEDIATRICIAN to join established, four-physician pediatric group practice in southern New Hampshire - close to Boston, mountains, and shore. Reply to Box #039305.

Public Health Physician III
Public Health Physician II
$72,473 - $91,299

The New York State Department of Health has challenging opportunities for two physicians in the Bureau of Child and Adolescent Health, in Albany, New York. One position, the Public Health Physician III will serve as Director and will be responsible for providing medical leadership and direction to a broad array of statewide programs designed to address the preventive, primary and special health care needs of children and adolescents. A second position, the Public Health Physician II will serve as medical consultant for children with special health care needs and will be responsible for providing medical consultation and direction to research, policy and program development for the Physically Handicapped Children's Program, the Early Intervention Program for Infants and Toddlers, and other programs for children with special health care needs. Both positions offer excellent benefits including affiliation with the School of Public Health, University at Albany. These positions require occasional overnight travel.

Applicants for the Public Health Physician III must be licensed to practice medicine in New York State, be board certified in internal medicine, obstetrics and gynecology, pediatrics, preventive medicine or family practice and have one year of subsequent full-time administrative, supervisory, teaching, or program consultative experience in public health, general medical care or a comparable program. Preferred applicants will have 3-5 years experience in Maternal and Child Health, Family Health or Public Health, 2 years of which were in a comparable administrative position.

Applicants for the Public Health Physician II must be licensed to practice medicine in New York State and be eligible for or board certified in internal medicine, obstetrics and gynecology, pediatrics, preventive medicine or family practice. Preferred applicants will have advanced training and experience in pediatric chronic disease, pediatric rehabilitation medicine, behavioral or developmental pediatrics, or experience in program and policy development in public health programs for children with special health care needs. Consideration will be given to applicants interested in half-time employment as the Public Health Physician II.

Reply to Human Resources Management Group, New York State Department of Health, AIW/PHP, Room 2276, Corning Tower, Empire State Plaza, Albany, New York 12237-0012 by April 1, 1993.
An Affirmative Action/Equal Opportunity Employer.

□

THE EXPANDING PEDIATRIC DEPARTMENT at Butterworth Hospital is seeking BC/BE pediatricians for the following areas: **Director of adolescent medicine** - few restrictions or limitations on this first time position. University appointment is expected with protected time for scholarly activities. Responsibilities will include developing an adolescent medicine service that provides both inpatient and outpatient care, coordinating community response to adolescent health care issues, plus supervising and teaching pediatric residents. Successful candidate will have completed a fellowship in ambulatory pediatrics or adolescent pediatrics or have related experience. **Child protection specialist** - excellent opportunity for an experienced or fellowship trained pediatrician to assume leadership of the Child Protection Team. Responsibilities will include organizing our efforts to address the needs of the 700 children yearly who are discharged with a diagnosis of suspected or confirmed child abuse. A solid multidisciplinary core team is already in place. University appointment expected; reserved time for research and personal development. Butterworth Hospital, a 529-bed university affiliated teaching hospital is located in Grand Rapids, the educational, cultural, and economic center of west Michigan. Call or write: **Nancy Martens, Mgr, Medical Staff Placement, 100 Michigan NE, MC#73, Grand Rapids, MI 49503. 1-800-788-8410 or (616) 732-3600.**

Developmental Pediatrician

Minneapolis Children's Medical Center is seeking a BC/BE Pediatrician with fellowship training in developmental pediatrics. This physician will join a department that presently has one other developmental pediatrician as well as staff from the disciplines of occupational therapy, physical therapy, speech and language pathology, audiology, nursing, psychology, and social work.

Responsibilities include inpatient/outpatient evaluations of children with a broad spectrum of developmental disabilities such as Cerebral Palsy, Down Syndrome, feeding disorders, and communication/interaction disorders. This position also participates in interdisciplinary teams, and provides an opportunity to teach pediatric residents and to participate in clinical research.

Minneapolis Children's Medical Center is a rapidly expanding, 165-bed, university affiliated hospital with a family-oriented focus that champions the special needs of children.

Please send CV to Kim McConnell, M.D., Medical Director of Developmental and Rehabilitation Services, or call (612) 863-6843. Minneapolis Children's Medical Center, 2525 Chicago Avenue South, Minneapolis, MN 55404.

MICHIGAN—Director of established division of pediatric infectious diseases being sought to fill position at regional children's tertiary care program located in a pleasant and prosperous midwestern city. Butterworth Hospital is a 529-bed university affiliated, community based academic health center with a strong department of pediatrics which currently includes divisions in nearly all medical and surgical subspecialties, a 44-bed Level III NICU, and 17-bed intermediate care nursery, 14-bed PICU, 48 medical-surgical beds, busy hematology/oncology service, fully accredited pediatric residency program, and a 10-story women and children's tower (opening 1993) which will house the new DeVos Children's Hospital at Butterworth. This hospital based position offers challenging clinical cases, strong pediatric laboratory services with excellent virology component, teaching responsibilities with medical school appointment, opportunities for clinical research, and rewarding professional environment. Salary and benefits are exceptional. Please contact: Dr David Freyer (Search Committee Chair), Dept of Pediatrics, Butterworth Hospital, 100 Michigan NE, Grand Rapids, MI 49503 with CV and interests. (616) 776-2086.

□

WANTED: A NEONATOLOGIST for Level II Nursery in west suburbs of Chicago (30 miles). Excellent salary and benefits. Please reply to: PO Box 360, South Elgin, IL 60175.

ACADEMIC PEDIATRIC NEUROLOGIST—The Department of Pediatrics of The Ohio State University College of Medicine and Children's Hospital, Columbus, is seeking a pediatric neurologist at the Assistant to full Professor level. Candidates must be Board certified or eligible in neurology with special competence in child neurology. Subspecialty expertise in the management of epilepsy is desirable. Special consideration will be given to applicants with a strong background in the development and implementation of clinical research studies, especially studies involving experimental drug therapy of epilepsy. Duties will include teaching, patient care, and research. This position offers challenging opportunities for academic growth and development in the neurosciences. The Children's Hospital in Columbus is the major pediatric facility for South Central Ohio, and is the pediatric teaching hospital for The Ohio State University College of Medicine. The Division of Pediatric Neurology has a diverse clinical program which includes a well equipped clinical neurophysiology laboratory. Ongoing NIH funded research in the division includes acute treatment of seizures, and the neurophysiology of bacterial brain infection. For further information, contact: Francis S. Wright, MD, Division of Neurology, Dept of Pediatrics, Children's Hospital, 700 Children's Dr, Columbus, OH 43205. (614) 461-6742. The Ohio State University is an Equal Opportunity/Affirmative Action Employer. Qualified women, minorities, Vietnam-era veterans, disabled veterans, and the disabled are encouraged to apply.

□

Academic Program Development

Neurology
Intensive Care
Hematology/Oncology
Developmental Pediatrics
Neonatology

The Department of Pediatrics of the University of South Dakota School of Medicine is in the process of program expansion and development.

The above full-time academic positions are ideally suited for the clinician scholar who wishes to develop and guide a program which will have significant impact on the health care of children in our region. We are looking for individuals who are capable of developing warm and caring relationships with patients and their families. Although our program is heavily slanted toward medical student education and patient care, both laboratory and clinical research endeavors are growing within our Department and ample resources for both are provided. This is an opportunity to get in on the ground floor and build a program within a close-knit, enthusiastic and growing Department.

Sioux Falls, a community of 105,000, with a referral base of 600,000, recently received national recognition as America's best place to live because of the strength of its economy and family-oriented quality of life. Competitive compensation and comprehensive benefit package offered. EOE/AAE.

Send CV or call: Lawrence J. Fenton, M.D. at (800)468-3333 FAX (605)333-1580
Professor and Chairman

Andersen, MD, Dept of Pediatrics, The University of Texas Southwestern Medical Center at Dallas, 5323 Harry Hines Blvd, Dallas, TX 75235-9063. The University of Texas Southwestern Medical Center at Dallas is an Equal Opportunity/Affirmative Action Employer.

THE DEPARTMENT OF PEDIATRIC HEMATOLOGY/ONCOLOGY at Valley Children's Hospital in Fresno, California, is seeking an additional Board certified or Board eligible pediatric hematologist/oncologist with a focus on patient care to join two other Board certified pediatric hematologists/oncologists. Valley Children's Hospital is a 182-bed non-profit, full service regional center with multiple pediatric subspecialists and is the only children's hospital between Los Angeles and the San Francisco Bay area. Annually, there are more than 6,500 hospital admissions and over 57,000 children are seen in the outpatient clinic facilities. The hematology/oncology service covers more than 7,400 inpatient and outpatient visits per year. We register approximately 75-80 new oncology patients annually with Children's Cancer Group. Nearly 250-300 hematology consultations are conducted annually as well. We are affiliated with the University of California San Francisco, Pediatric Residency Program. Teaching of house staff, pediatricians, and nursing staff is a strong component of the program. Fresno is located in the heart of the San Joaquin Valley. The area takes pride in its abundance of recreational, sporting, and cultural activities. Fresno is close to the mountains and several lakes (Yosemite National Park is a 1½ hour drive). Fresno is proud of its excellent school system and affordable housing. If you are interested in learning more about the position, please submit curriculum vitae to: Susan Woomer, PA, Esq, Assistant VP, Medical Affirs, Valley Children's Hospital, 3151 N Millbrook, Fresno, CA 93703.

□

□

THE DEPARTMENT OF PEDIATRIC GASTROENTEROLOGY AND NUTRITION at Valley Children's Hospital in Fresno, California, has an immediate opening for an additional full-time BC/BE pediatric gastroenterologist to join the practice of two other BC pediatric gastroenterologists. This Central Valley hospital is affiliated with the University of California, San Francisco and faculty appointment to tenured or non-tenured track is encouraged. BC/BE in pediatric GI required. Proficiency in endoscopic techniques, as well as a background in nutritional support and research skills is essential. This position includes teaching pediatric and family practice residents. Valley Children's Hospital is a 182-bed regional center with multiple pediatric subspecialists and is the only children's hospital between Los Angeles and the San Francisco Bay area. A new, fully equipped video endoscopy lab (320/year), an eight-channel manometer (150/year), three ambulatory pH probbes (200/year), a breath hydrogen analyzer (140/year), and office space are located on the hospital campus. Professional support staff include three registered nurses, and a medical assistant. The nutritional support team includes a clinical nurse specialist, an LVN, six pediatric clinical dieticians, and seven Pharm.D's. Fresno affords an abundance of recreational, sporting, and cultural activities. Fresno is close to the mountains and several lakes (Yosemite is only a 1½ hour drive away). Fresno is proud of its excellent school system and affordable housing. If you are interested in learning more about the position, please submit a CV to: Susan Woomer, PA, Esq, Assistant Vice President, Medical Affairs, Valley Children's Hospital, 3151 N Millbrook, Fresno, CA 93703. (209) 225-3000, ext 1142.

VALLEY CHILDREN'S HOSPITAL, IN FRESNO, CALIFORNIA, is seeking a pediatric infectious disease specialist (MD) with a focus on patient care to oversee the hospital infectious diseases program, teach in the pediatric residency program, function as the hospital epidemiologist, and Chair the Infection Control Committee. Training/experience in hospital epidemiology and an infectious disease fellowship are preferred. Established in 1952, Valley Children's Hospital is a 182-bed regional center with multiple pediatric subspecialties and is the only children's hospital between Los Angeles and the San Francisco Bay area. Annually, there are more than 6,500 hospital admissions, over 57,000 children seen in the outpatient clinic facility, and approximately 20% of all inpatient diagnoses are infection related. There is a 30-bed neonatal intensive care unit and a 20-bed pediatric intensive care unit. Fresno affords an abundance of recreational, sporting, and cultural activities. Fresno is close to the mountains and several lakes (Yosemite is only a 1½ hour drive away). Fresno is proud of its excellent school system and affordable housing. If you are interested in learning more about the position, please submit a CV to: Susan Woomer, PA, Esq, Assistant Vice President, Medical Affairs, Valley Children's Hospital, 3151 N Millbrook, Fresno, CA 93703.

OPPORTUNITIES—*Foreign*

KING FAISAL SPECIALIST HOSPITAL AND RESEARCH CENTRE
RIYADH, SAUDI ARABIA

CHAIRMAN, DEPARTMENT OF PEDIATRICS

The King Faisal Specialist Hospital and Research Centre in Riyadh, Saudi Arabia is inviting applications for the position of Chairman, Department of Pediatrics.

The hospital is the pre-eminent tertiary care referral centre for the Kingdom of Saudi Arabia and includes an integrated research centre, 517 beds, extraordinary diagnostic and therapeutic capabilities and superb residential and recreational facilities for staff and dependents. The medical staff consists of two hundred carefully selected internationally qualified consultant physicians and more than 150 Saudi Arabian junior staff in residency and fellowship training programs. The Department of Pediatrics has 23 consultant specialists operating sections of infectious diseases; neonatology; neurology; genetics, endocrinology, metabolic diseases; rheumatology; nephrology and immunology & allergy. There is an active Arab Board residency training program, and the department is developing strong clinical research activities. The department operates 98 beds, including a separate pediatric intensive care unit, a neonatal intensive care unit, in addition to cardiology and oncology beds in affiliation with the Departments of Cardiovascular Diseases and Oncology. Plans for extensive expansion of the inpatient facility are underway.

A suitably qualified candidate for this position will be an experienced and clinically active physician with a full-time academic appointment at a university medical centre. A record of accomplishments in service, teaching and research is expected. Administrative experience and a substantial bibliography of published work in refereed medical journals are essential.

The remuneration and benefit package for this position is well above the international average for expatriate physicians. Salary is individually negotiable and free of local taxation. The compensation package is particularly attractive since living expenses are small. The hospital provides free, fully furnished single family accommodation, return airfares for the employee and dependents annually, comprehensive medical and dental care, educational assistance for dependent children and approximately sixty days of holiday and professional leave each year.

To obtain further information concerning this position, candidates are invited to send a curriculum vitae with full biographical information, record of professional experience and bibliography of published work, as well as the names of three professional referees to the:

Chairman, Search Committee, MBC-36
King Faisal Specialist Hospital and Research Centre
Post Office Box 3354, Riyadh 11211
Kingdom of Saudi Arabia
(Tel: 966 1 442 7230 Fax: 966 1 442 7237)

Children's Advil® (ibuprofen) Suspension

AN ALTERNATIVE FOR PEDIATRIC CARE

100mg/5mL

BRIEF SUMMARY OF PRESCRIBING INFORMATION
SEE PACKAGE INSERT FOR FULL PRESCRIBING INFORMATION.

INDICATIONS: For reduction of fever in patients aged 6 months and older, and relief of mild-to-moderate pain in patients 12 years and older; for relief of the signs/symptoms of juvenile arthritis, rheumatoid arthritis and osteoarthritis, for relief of primary dysmenorrhea.

CONTRAINDICATIONS: Hypersensitivity to ibuprofen. Do not give to patients with all or part of the syndrome of nasal polyps, angioedema, and bronchospastic reactivity to aspirin or other nonsteroidal anti-inflammatory drugs (NSAIDs). Anaphylactoid reactions have occurred in such patients.

WARNINGS: Risks of GI Ulcerations, Bleeding, and Perforation with NSAID Therapy: Remain alert for ulceration and bleeding in patients treated chronically with NSAIDs even in the absence of previous GI tract symptoms. In clinical trials occurrence of serious GI toxicity is about 1% after 3-6 months of therapy; 2%-4% after one year.

Except for a prior history of serious GI events and other risk factors known to be associated with peptic ulcer disease, no factors have been associated with increased risk. Elderly or debilitated patients tolerate ulceration or bleeding less well and have more fatal GI events.

PRECAUTIONS: General: Serious GI tract ulceration and bleeding can occur without warning symptoms; follow chronically treated patients for signs/symptoms of ulceration and bleeding.

Blurred and/or diminished vision, scotomata, and/or changes in color vision have been reported. If a patient develops such complaints discontinue the drug and have an ophthalmologic examination performed.

Fluid retention and edema have been reported, therefore, use with caution in patients with history of cardiac decompensation or hypertension.

Ibuprofen can inhibit platelet aggregation, although less than aspirin does, and prolong bleeding time (but within the normal range). Use with caution in persons with intrinsic coagulation defects and those on anticoagulant therapy.

To avoid exacerbation of disease or adrenal insufficiency, patients on prolonged corticosteroid therapy should have their therapy tapered slowly when ibuprofen is added to the treatment program.

The antipyretic and anti-inflammatory activity of ibuprofen may reduce fever and inflammation, thus diminishing their utility as diagnostic signs in detecting complications of presumed noninfectious, noninflammatory painful conditions.

Liver Effects: Meaningful (3 times the upper limit of normal) elevations of SGPT or SGOT (AST) occurred in controlled clinical trials in less than 1% of patients. Evaluate patients with symptoms and/or signs suggesting liver dysfunction, or in whom an abnormal liver test has occurred, for evidence of more severe hepatic reactions while on ibuprofen therapy. If abnormal liver tests persist or worsen, if clinical signs and symptoms consistent with liver disease develop, or if systemic manifestations occur, discontinue ibuprofen.

Hemoglobin Levels: Small decreases (usually not exceeding one gram) in hemoglobin and hematocrit with an apparent dose response relationship have been observed following chronic administration. If there are no signs of bleeding it is probably not clinically important.

In two ibuprofen postmarketing studies a decrease in hemoglobin of 1 gm or more was observed.

Aseptic Meningitis: While rare, aseptic meningitis with fever and coma has occurred in patients on ibuprofen. Although more likely to occur in patients with systemic lupus erythematosus and related connective tissue diseases, it has been reported in adults without an underlying chronic disease. If signs or symptoms of meningitis develop in a patient on ibuprofen, consider the possibility of its being related to ibuprofen.

Renal Effects: Like other NSAIDs, long-term administration of ibuprofen to animals has resulted in renal papillary necrosis and other abnormal renal pathology. In humans, acute interstitial nephritis with hematuria, proteinuria, and occasionally nephrotic syndrome have been reported. A second form of renal toxicity is seen in patients with prerenal conditions leading to reduction in renal blood flow or blood volume. In these patients, NSAIDs may cause a dose-dependent reduction in prostaglandin formation and precipitate overt renal failure; patients with impaired renal function, heart failure, liver dysfunction, those taking diuretics, and the elderly are at greatest risk. Monitor renal function in patients at high risk who take ibuprofen chronically if they have signs or symptoms of azotemia. Discontinuation of NSAIDs is typically followed by recovery. Since ibuprofen is eliminated primarily by the kidneys, closely monitor patients with significant renal impairment and anticipate a dosage reduction to avoid drug accumulation.

Information for Patients: Physicians may wish to discuss potential risks (see **WARNINGS, PRECAUTIONS, ADVERSE REACTIONS**) and likely benefits with patients.

Drug Interactions: *Coumarin-type Anticoagulants:* Short-term studies did not show a significant effect of ibuprofen on a variety of clotting factors when given with coumarin-type anticoagulants. However, bleeding has been reported when ibuprofen or other NSAIDs were administered to patients on these medications; use caution when administering ibuprofen to such patients.

Aspirin: In animal studies, concomitant aspirin/NSAID therapy yielded a net decrease in anti-inflammatory activity with lowered NSAID blood levels. Single dose bioavailability studies in normal volunteers failed to show an effect of aspirin on ibuprofen levels.

Methotrexate: In vitro studies indicate that ibuprofen could enhance the toxicity of methotrexate. Use caution if ibuprofen is administered concomitantly.

H_2 Antagonists: In human volunteers, coadministration of cimetidine or ranitidine with ibuprofen had no substantive effect on ibuprofen serum concentrations.

Furosemide: Ibuprofen can reduce the natriuretic effect of furosemide and thiazides in some patients. During concomitant ibuprofen therapy, observe the patient closely for signs of renal failure and to assure diuretic efficacy.

Lithium: Ibuprofen elevated plasma lithium levels (15%) and reduced renal lithium clearance (19%) in normal volunteers. Observe patients carefully for lithium toxicity. Read lithium package insert before its use.

Diabetes: Each 5 mL of CHILDREN'S ADVIL® SUSPENSION contains 2.5 g of sucrose; consider this when treating patients with impaired glucose tolerance. It also contains sorbitol, 350 mg/5 mL. Although in clinical trials CHILDREN'S ADVIL® SUSPENSION was not associated with more diarrhea than controls, if diarrhea develops, the physician may wish to review other sources of sorbitol in the patient's diet.

Pregnancy/Nursing Mothers: Administration of ibuprofen is not recommended during pregnancy or for use by nursing mothers.

Infants: Safety and efficacy in children < 6 months old have not been established.

ADVERSE REACTIONS: The most frequent type of adverse reaction is gastrointestinal (GI). In adult clinical trials involving chronic ibuprofen administration, 4%-16% of patients reported one or more GI complaints.

Incidence Greater Than 1% (but < 3%) During Controlled Clinical Trials in Adults, Probable Causal Relationship: Nausea,* epigastric pain,* heartburn,* diarrhea, abdominal distress, nausea and vomiting, indigestion, constipation, abdominal cramps or pain, fullness of the GI tract (bloating and flatulence); dizziness,* headache, nervousness; rash* (including maculopapular type), pruritus; tinnitus; decreased appetite; edema, fluid retention (generally responds promptly to drug discontinuation, see **PRECAUTIONS**).

Precise Incidence Unkown (but < 1%), Probable Causal Relationship (see **PRECAUTIONS**): Gastric or duodenal ulcer with bleeding and/or perforation, GI hemorrhage, melena, gastritis, hepatitis, jaundice, abnormal liver function tests, pancreatitis, depression, insomnia, confusion, emotional lability, somnolence, aseptic meningitis with fever and coma; vesiculobullous eruptions, urticaria, erythema multiforme, Stevens-Johnson syndrome, alopecia; hearing loss, amblyopia (blurred and/or diminished vision, scotomata and/or changes in color vision); neutropenia, agranulocytosis, aplastic anemia, hemolytic anemia (sometimes Coomb's positive), thrombocytopenia with or without purpura, eosinophilia, decreases in hemoglobin and hematocrit; congestive heart failure in patients with marginal cardiac function, elevated blood pressure, palpitations; syndrome of abdominal pain, fever, chills, nausea and vomiting, anaphylaxis, bronchospasm (see **CONTRAINDICATIONS**); acute renal failure, decreased creatinine clearance, polyuria, azotemia, cystitis, hematuria; dry eyes and mouth, gingival ulcers, rhinitis.

Precise Incidence Unkown (but < 1%), Causal Relationship Unknown: Paresthesias, hallucinations, dream abnormalities, pseudotumor cerebri; toxic epidermal necrolysis, photoallergic skin reactions; conjunctivitis, diplopia, optic neuritis, cataracts; bleeding episodes (eg., epistaxis, menorrhagia); gynecomastia, hypoglycemic reactions, acidosis; arrhythmias (sinus tachycardia, sinus bradycardia); serum sickness, lupus erythematosus syndrome, Henoch-Schonlein vasculitis, angioedema; renal papillary necrosis.

**Reactions occurring in 3%-9% of adult patients treated with ibuprofen. Reactions occurring in < 3% are unmarked.*

OVERDOSAGE: Induce emesis or perform gastric lavage. Oral activated charcoal may be useful in addition to supportive therapy. Because the drug is acidic and excreted in the urine, administration of alkali and induction of diuresis may be beneficial.

DOSAGE AND ADMINISTRATION: Do not exceed 3200 mg total daily dose. Fever: Children 6 months to 12 years of age—5 mg/kg if baseline temperature is 102.5°F or below, or 10 mg/kg if baseline temperature is greater than 102.5°F, every 6-8 hours; Adults—400 mg every 4-6 hours. Mild to moderate pain in adults: 400 mg every 4 to 6 hours prn. Juvenile Arthritis: 30-40 mg/kg/day in 3 or 4 divided doses. RA and OA: 1200-3200 mg daily in 3 or 4 divided doses (adults). Dysmenorrhea: 400 mg every 4 hours prn.

When the heat's on...

Children's Advil® (ibuprofen) Suspension

100 mg/5mL

- Children's Advil® Suspension (10 mg/kg) provides better temperature reduction and longer duration of action than Tylenol®* (10 mg/kg) in fevers above 102.5°F[1]†
- Comparable to acetaminophen in incidence of side effects[1-3]
- Minimal risk for adverse reactions at recommended doses[1-5]‡
- Demonstrated safety profile in acute antipyretic use[1-3]

* Tylenol (acetaminophen) is a registered trademark of McNeil Consumer Products Company.

† Labeled fever-reducing dose of acetaminophen drops and liquid is approximately 10-15 mg/kg.

‡Children's Advil Suspension is contraindicated in patients hypersensitive to aspirin or other NSAIDs. As with other NSAIDs, the most frequent complaints relate to the GI tract.
