

**ADELE DELLENBAUGH HOFMANN AWARD
REQUEST FOR NOMINATIONS FOR THE 1997 AWARD RECIPIENT**

The American Academy of Pediatrics Section on Adolescent Health selects one individual each year who exemplifies excellence in the field of adolescent health to receive the Adele Dellenbaugh Hofmann Award.

Qualifications to be considered:

An advocate for adolescents who enhances the care of the adolescent in pediatrics. Except in unusual circumstances, the individual should be a member of the American Academy of Pediatrics (AAP).

The Award consists of a \$1,000 honorarium, a plaque, and specified travel expenses to attend the AAP Annual Meeting, where the recipient will give a short presentation.

Letters identifying possible nominees should be sent to:

American Academy of Pediatrics, Section on Adolescent Health
141 Northwest Point Boulevard
Elk Grove Village, IL 60009

Supporting information for each nominee should include a statement from the nominator and biographical data, including curriculum vitae, on the nominee. The statement from the nominator shall be limited to one page, double-spaced, and will indicate why the nominator feels the nominee qualifies for the Award.

The nominator should request an additional letter of support from an individual who is familiar with the nominee's work. The letter should contain examples of the actions or achievements that make the nominee outstanding and worthy to receive the Award.

All materials should be postmarked to the address above by June 14, 1996.

The Adele Dellenbaugh Hofmann Award is supported by an educational grant from McNeil Consumer Products Company.

Tinea capitis
is a family affair!

So if you treat one,
you may need
to treat them all.

Highly contagious, *t. capitis* is reaching epidemic proportions among African-American children. And family epidemics are common.^{1,2} So when you diagnose *t. capitis* in one child, examine the brothers and sisters, and other family members as well.

GRIFULVIN V[®] is the only suspension. Its easy-to-swallow solution helps encourage compliance while providing broad-spectrum activity against a wide variety of pathogens.

The most commonly reported adverse reactions are of the hypersensitivity type, such as skin rashes, urticaria, and, rarely, angioneurotic edema.

* Major indications: *t. capitis* (ringworm of the scalp); *t. corporis* (ringworm of the body); *t. unguium* (ringworm of the nails); *t. pedis* (athlete's foot); *t. cruris* (ringworm of the thigh); *t. barbae* (barber's itch). Not effective in *t. versicolor*. The use of the drug is not justified in minor or trivial infections which will respond to topical antifungal agents alone. **References:** 1. Frieden IJ, Howard R. Tinea capitis: epidemiology, diagnosis, treatment, and control. *J Am Acad Dermatol.* 1994;31:S42-S46. 2. Bronson DM, Desai DR, Barsky S, Foley SM. An epidemic of infection with *Trichophyton tonsurans* revealed in a 20-year survey of fungal infections in Chicago. *J Am Acad Dermatol.* 1983;8:322-330.

GRIFULVIN V[®]
(griseofulvin oral suspension)
microsize Suspension 125 mg/5 mL

The only solution for their tinea*

GRIFULVIN V®

[gri-'fulven]
(griseofulvin oral suspension)
microsize Suspension 125mg/5mL
(griseofulvin tablets)
microsize Tablets 250mg or 500mg

Indications and Usage

Major indications for GRIFULVIN V (griseofulvin microsize) are:

- Tinea capitis (ringworm of the scalp)
- Tinea corporis (ringworm of the body)
- Tinea pedis (athlete's foot)
- Tinea unguium (onychomycosis: ringworm of the nails)
- Tinea cruris (ringworm of the thigh)
- Tinea barbae (barber's itch)

GRIFULVIN V (griseofulvin microsize) inhibits the growth of those genera of fungi that commonly cause ringworm infections of the hair, skin, and nails, such as:

<i>Trichophyton rubrum</i>	<i>Microsporium audouinii</i>
<i>Trichophyton tonsurans</i>	<i>Microsporium canis</i>
<i>Trichophyton mentagrophytes</i>	<i>Microsporium gypseum</i>
<i>Trichophyton interdigitale</i>	<i>Epidermophyton floccosum</i>
<i>Trichophyton verrucosum</i>	<i>Trichophyton megnini</i>
<i>Trichophyton sulphureum</i>	<i>Trichophyton gallinae</i>
<i>Trichophyton schoenleinii</i>	<i>Trichophyton crateriform</i>

Note: Prior to therapy, the type of fungi responsible for the infection should be identified. The use of the drug is not justified in minor or trivial infections which will respond to topical antifungal agents alone.

It is not effective in:

Bacterial infections	Coccidioidomycosis
Candidiasis (Moniliasis)	North American Blastomycosis
Histoplasmosis	Cryptococcosis (Torulosis)
Actinomycosis	Tinea versicolor
Sporotrichosis	Nocardiosis
Chromoblastomycosis	

Contraindications

This drug is contraindicated in patients with porphyria, hepatocellular failure, and in individuals with a history of hypersensitivity to griseofulvin.

Two cases of conjoined twins have been reported in patients taking griseofulvin during the first trimester of pregnancy. Griseofulvin should not be prescribed to pregnant patients.

Warnings

Prophylactic Usage: Safety and efficacy of prophylactic use of this drug has not been established.

Chronic feeding of griseofulvin, at levels ranging from 0.5-2.5% of the diet, resulted in the development of liver tumors in several strains of mice, particularly in males. Smaller particle sizes result in an enhanced effect. Lower oral dosage levels have not been tested. Subcutaneous administration of relatively small doses of griseofulvin once a week during the first three weeks of life has also been reported to induce hepatomata in mice. Although studies in other animal species have not yielded evidence of tumorigenicity, these studies were not of adequate design to form a basis for conclusions in this regard.

In subacute toxicity studies, orally administered griseofulvin produced hepatocellular necrosis in mice, but this has not been seen in other species. Disturbances in porphyrin metabolism have been reported in griseofulvin-treated laboratory animals. Griseofulvin has been reported to have a colchicine-like effect on mitosis and cocarcinogenicity with methylicholanthrene in cutaneous tumor induction in laboratory animals.

Reports of animal studies in the Soviet literature state that a griseofulvin preparation was found to be embryotoxic and teratogenic on oral administration to pregnant Wistar rats. Rat reproduction studies done thus far in the United States and Great Britain have been inconclusive in this regard, and additional animal reproduction studies are underway. Pups with abnormalities have been reported in the litters of a few bitches treated with griseofulvin.

Suppression of spermatogenesis has been reported to occur in rats but investigation in man failed to confirm this.

Precautions

Patients on prolonged therapy with any potent medication should be under close observation. Periodic monitoring of organ system function, including renal, hepatic and hemopoietic, should be done.

Since griseofulvin is derived from species of penicillin, the possibility of cross sensitivity with penicillin exists; however, known penicillin-sensitive patients have been treated without difficulty.

Since a photosensitivity reaction is occasionally associated with griseofulvin therapy, patients should be warned to avoid exposure to intense natural or artificial sunlight. Should a photosensitivity reaction occur, lupus erythematosus may be aggravated.

Drug Interactions: Patients on warfarin-type anticoagulant therapy may require dosage adjustment of the anticoagulant during and after griseofulvin therapy. Concomitant use of barbiturates usually depresses griseofulvin activity and may necessitate raising the dosage.

The concomitant administration of griseofulvin has been reported to reduce the efficacy of oral contraceptives and to increase the incidence of breakthrough bleeding.

Adverse Reactions

When adverse reactions occur, they are most commonly of the hypersensitivity type such as skin rashes, urticaria and rarely, angioneurotic edema, and may necessitate withdrawal of therapy and appropriate countermeasures. Paresthesias of the hands and feet have been reported rarely after extended therapy. Other side effects reported occasionally are oral thrush, nausea, vomiting, epigastric distress, diarrhea, headache, fatigue, dizziness, insomnia, mental confusion and impairment of performance of routine activities.

Proteinuria and leukopenia have been reported rarely. Administration of the drug should be discontinued if granulocytopenia occurs.

When rare, serious reactions occur with griseofulvin, they are usually associated with high dosages and/or long periods of therapy.

Especially for Educators

Pediatric Education in Community Settings

If you are creating, developing, or refining community-based educational experiences, particularly at the undergraduate and graduate medical education level, this new manual is a

must-have resource. The core knowledge necessary to consider the spectrum of issues related to community-based education is presented in the four sections of the manual:

- Theoretical background
- Resource materials and practical examples
- Directory of professionals involved in Pediatric Education in Community Settings (PECS) programs
- Annotated bibliography

Developed by the University of Massachusetts Medical Center, the Ambulatory Pediatric Association, and the American Academy of Pediatrics, this work was funded by the federal Maternal and Child Health Bureau.

Special Resources for Special Children

The Medical Home and Early Intervention: Linking Services for Children With Special Needs

Special needs call for specialized education, not only for patients and their families but also for the professionals who support them. This 16-page handbook serves as a unique resource for child advocates to promote a continuum of care for young children with special health care needs. The text focuses on:

- ◆ The provision of community-based health services through the concept of the medical home
- ◆ The role of the Early Intervention Program for Infants and Toddlers With Disabilities in providing the statewide system for early intervention services

The Medical Home and Early Intervention is useful for anyone involved in early intervention services for young children with special needs (birth through age 3 years).

Call 800/433-9016 to charge your order (minimum charge order \$15; MasterCard or VISA only)

Mail order form and check made payable to the American Academy of Pediatrics to: AAP Publications, PO Box 927, Elk Grove Village, IL 60009-0927.

MHEI

CEFTIN

The power against today's pathogens*

- ◆ Low incidence of resistance
- ◆ Can alleviate clinical symptoms, including irritability, ear pain, and tugging at the ear in 3 to 5 days of therapy¹
- ◆ Proven as effective as amoxicillin/clavulanate in acute otitis media (AOM) with a lower incidence of gastrointestinal adverse events, as shown in three clinical AOM trials¹⁻³

*Indicated for the treatment of children 3 months to 12 years of age with acute bacterial otitis media caused by *Streptococcus pneumoniae*, *Haemophilus influenzae* (including β -lactamase-producing strains), *Moraxella catarrhalis* (including β -lactamase-producing strains), or *Streptococcus pyogenes*. CEFTIN for Oral Suspension and CEFTIN[®] Tablets (cefuroxime axetil tablets) are not bioequivalent and are not substitutable on a mg/mg basis.

In US controlled clinical trials with CEFTIN for Oral Suspension, the most commonly reported adverse event was diarrhea/loose stools at 8.6%. Other adverse events included diaper rash (3.4%) and nausea/vomiting (2.6%). In these trials, 5% of patients disliked the taste; however, only 1.4% dropped out because of the taste and/or problems with drug administration.

The incidence of diarrhea/loose stools reported in the package inserts is 8.6% for CEFTIN for Oral Suspension and 9.0% for amoxicillin/clavulanate.

Please consult Brief Summary of Prescribing Information on adjacent page.

For acute otitis media and impetigo: 30 mg/kg/d divided b.i.d.
Maximum daily dose of 1,000 mg

For streptococcal pharyngitis/
tonsillitis: 20 mg/kg/d divided b.i.d.
Maximum daily dose of 500 mg

CEFTIN[®]
FOR ORAL
SUSPENSION
(cefuroxime axetil powder
for oral suspension)

*A powerful solution to
bacterial evolution*

GlaxoWellcome

Glaxo Wellcome Inc.
Research Triangle Park, NC 27709

Ceftin® Tablets (cefuroxime axetil tablets)
Ceftin® for Oral Suspension (cefuroxime axetil powder for oral suspension) **BRIEF SUMMARY**

The following is a brief summary only. Before prescribing, see complete prescribing information in Ceftin® Tablets and Ceftin® for Oral Suspension product labeling.

CONTRAINDICATIONS: Ceftin® products are contraindicated in patients with known allergy to the cephalosporin group of antibiotics.

WARNINGS: CEFTIN® TABLETS AND CEFTIN® FOR ORAL SUSPENSION ARE NOT BIOEQUIVALENT AND ARE THEREFORE NOT SUBSTITUTABLE ON A MG/MG BASIS (SEE CLINICAL PHARMACOLOGY SECTION OF FULL PRESCRIBING INFORMATION).

BEFORE THERAPY WITH CEFTIN PRODUCTS IS INSTITUTED, CAREFUL INQUIRY SHOULD BE MADE TO DETERMINE WHETHER THE PATIENT HAS HAD PREVIOUS HYPERSENSITIVITY REACTIONS TO CEFTIN PRODUCTS, OTHER CEPHALOSPORINS, PENICILLINS, OR OTHER DRUGS. IF THIS PRODUCT IS TO BE GIVEN TO PENICILLIN-SENSITIVE PATIENTS, CAUTION SHOULD BE EXERCISED BECAUSE CROSS-HYPERSENSITIVITY AMONG BETA-LACTAM ANTIBIOTICS HAS BEEN CLEARLY DOCUMENTED AND MAY OCCUR IN UP TO 10% OF PATIENTS WITH A HISTORY OF PENICILLIN ALLERGY. IF A CLINICALLY SIGNIFICANT ALLERGIC REACTION TO CEFTIN PRODUCTS OCCURS, DISCONTINUE THE DRUG AND INSTITUTE APPROPRIATE THERAPY. SERIOUS ACUTE HYPERSENSITIVITY REACTIONS MAY REQUIRE TREATMENT WITH EPINEPHRINE AND OTHER EMERGENCY MEASURES, INCLUDING OXYGEN, INTRAVENOUS FLUIDS, INTRAVENOUS ANTIHISTAMINES, CORTICOSTEROIDS, PRESSOR AMINES, AND AIRWAY MANAGEMENT, AS CLINICALLY INDICATED.

Pseudomembranous colitis has been reported with nearly all antibacterial agents, including cefuroxime, and may range from mild to life threatening. Therefore, it is important to consider this diagnosis in patients who present with diarrhea subsequent to the administration of antibacterial agents.

Treatment with antibacterial agents alters normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is one primary cause of antibiotic-associated colitis.

After the diagnosis of pseudomembranous colitis has been established, appropriate therapeutic measures should be initiated. Mild cases of pseudomembranous colitis usually respond to drug discontinuation alone. In moderate to severe cases, consideration should be given to management with fluids and electrolytes, protein supplementation, and treatment with an antibacterial drug effective against *Clostridium difficile*.

PRECAUTIONS:

As with other broad-spectrum antibiotics, prolonged administration of cefuroxime axetil may result in overgrowth of nonsusceptible microorganisms. If superinfection occurs during therapy, appropriate measures should be taken.

Cephalosporins, including cefuroxime axetil, should be given with caution to patients receiving concurrent treatment with potent diuretics because these diuretics are suspected of adversely affecting renal function.

Cefuroxime axetil, as with other broad-spectrum antibiotics, should be prescribed with caution in individuals with a history of colitis. The safety and effectiveness of cefuroxime axetil have not been established in patients with gastrointestinal malabsorption. Patients with gastrointestinal malabsorption were excluded from participating in clinical trials of cefuroxime axetil.

Information for Patients/Caregivers (Pediatric): 1. During clinical trials, the tablet was tolerated by pediatric patients old enough to swallow the cefuroxime axetil tablet whole. The crushed tablet has a strong, persistent, bitter taste and should not be administered to pediatric patients in this manner. Pediatric patients who cannot swallow the tablet whole should receive the oral suspension.

2. Discontinuation of therapy due to taste and/or problems of administering this drug occurred in 1.4% of pediatric patients given the oral suspension. Complaints about taste (which may impair compliance) occurred in 3% of pediatric patients.

Drug/Laboratory Test Interactions: A false-positive reaction for glucose in the urine may occur with copper reduction tests (Benedict's or Fehling's solution or with Clinistix® tablets), but not with enzyme-based tests for glycosuria (e.g., Clinistix®, Tes-Tape®). As a false-negative result may occur in the ferricyanide test, it is recommended that either the glucose oxidase or hexokinase method be used to determine blood/plasma glucose levels in patients receiving cefuroxime axetil. The presence of cefuroxime does not interfere with the assay of serum and urine creatinine by the alkaline picrate method.

Drug/Drug Interactions: Concomitant administration of probenecid with cefuroxime axetil tablets increases the area under the serum concentration versus time curve by 50%. The peak serum cefuroxime concentration after a 1.5-g single dose is greater when taken with 1 g of probenecid (mean=14.8 mcg/mL) than without probenecid (mean=12.2 mcg/mL).

Drugs that reduce gastric acidity may result in a lower bioavailability of Ceftin® compared with that of fasting state and tend to cancel the effect of postprandial absorption.

Carcinogenesis, Mutagenesis, Impairment of Fertility: Although lifetime studies in animals have not been performed to evaluate carcinogenic potential, no mutagenic potential was found for cefuroxime axetil in the micronucleus test and a battery of bacterial mutation tests. Reproduction studies in rats at doses up to 1,000 mg/kg per day (nine times the recommended maximum human dose based on mg/m²) have revealed no evidence of impaired fertility.

Pregnancy: Teratogenic Effects: Pregnancy Category B: Reproduction studies have been performed in rats and mice at doses up to 3,200 mg/kg per day (23 times the recommended maximum human dose based on mg/m²) and have revealed no evidence of harm to the fetus due to cefuroxime axetil. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Labor and Delivery: Cefuroxime axetil has not been studied for use during labor and delivery.

Nursing Mothers: Because cefuroxime is excreted in human milk, consideration should be given to discontinuing nursing temporarily during treatment with cefuroxime axetil.

Pediatric Use: In controlled clinical trials, cefuroxime axetil has been administered to pediatric patients ranging in age from 3 months to 12 years (see INDICATIONS AND USAGE AND DOSAGE AND ADMINISTRATION sections).

Geriatric Use: In clinical trials when 12- to 64-year-old patients and geriatric patients (65 years of age or older) were treated with usual recommended dosages (i.e., 125 to 500 mg b.i.d., depending on type of infections), no overall differences in effectiveness were observed between the two age-groups. The geriatric patients reported somewhat fewer gastrointestinal events and less frequent vaginal candidiasis compared with patients aged 12 to 64 years old; however, no clinically significant differences were reported between the two age-groups. Therefore, no adjustment of the usual adult dose is necessary based on age alone.

ADVERSE REACTIONS:

CEFTIN® TABLETS (MULTIPLE-DOSE DOSING REGIMENS): In clinical trials using multiple doses of cefuroxime axetil tablets, 912 patients were treated with the recommended dosages of cefuroxime axetil (125 to 500 mg twice a day). There were no deaths or permanent disabilities thought related to drug toxicity. Twenty (2.2%) patients discontinued medication due to adverse events thought by the investigators to be possibly, probably, or almost certainly related to drug toxicity. Seventeen (85%) of the 20 patients who discontinued therapy did so because of gastrointestinal disturbances, including diarrhea, nausea, vomiting, and abdominal pain. The percentage of cefuroxime axetil tablet-treated patients who discontinued study drug because of adverse events was very similar at daily doses of 1,000, 500, and 250 mg (2.3%, 2.1%, and 2.2%, respectively). However, the incidence of gastrointestinal adverse events increased with the higher recommended doses. The following adverse events were thought by the investigators to be possibly, probably, or almost certainly related to cefuroxime axetil tablets in multiple-dose clinical trials (n=912 cefuroxime axetil-treated patients).

Adverse Reactions Ceftin Tablets Multiple-Dose Dosing Regimens—Clinical Trials			
Incidence ≥1%	Diarrhea/loose stools Nausea/vomiting Transient elevation in AST Transient elevation in ALT Eosinophilia Transient elevation in LDH	3.7% 3.0% 2.0% 1.6% 1.1% 1.0%	
Incidence <1% but >0.1%	Abdominal pain Abdominal cramps Flatulence Indigestion Headache Vaginitis Vulvar itch	Rash Hives Itch Dysuria Chills Chest Pain Shortness of breath	Mouth ulcers Swollen tongue Sleepiness Thirst Anorexia Positive Coombs' test

Ceftin® Tablets (cefuroxime axetil tablets)
Ceftin® for Oral Suspension (cefuroxime axetil powder for oral suspension)

In Postmarketing Experience: In addition to the events reported during clinical trials with Ceftin Tablets, the following adverse experiences have been reported from domestic and foreign sources during worldwide postmarketing surveillance: hypersensitivity reactions, including Stevens-Johnson syndrome, erythema multiforme, toxic epidermal necrolysis, serum sickness-like reactions, anaphylaxis, and angioedema. Jaundice has been reported very rarely. Onset of pseudomembranous colitis symptoms may occur during or after treatment (see WARNINGS).

CEFTIN TABLETS (SINGLE-DOSE REGIMEN FOR UNCOMPLICATED GONORRHEA): In Clinical Trials: In clinical trials using a single dose of cefuroxime axetil tablets, 644 patients were treated with the recommended dosage of cefuroxime axetil (1,000 mg) for the treatment of uncomplicated gonorrhea. There were no deaths or permanent disabilities thought related to drug toxicity in these studies.

The following adverse events were thought by the investigators to be possibly, probably, or almost certainly related to cefuroxime axetil in 1,000-mg single-dose clinical trials of cefuroxime axetil tablets in the treatment of uncomplicated gonorrhea conducted in the US.

Adverse Reactions Ceftin Tablets 1-g Single-Dose Regimen for Uncomplicated Gonorrhea—Clinical Trials			
Incidence ≥1%	Nausea/vomiting Diarrhea		6.7% 4.7%
Incidence <1% but >0.1%	Abdominal pain Dyspepsia Erythema Rash Pruritus Vaginal candidiasis Vaginal itch	Vaginal discharge Headache Dizziness Somnolence Muscle cramps Muscle stiffness Muscle spasm of neck	Tightness/pain in chest Bleeding/pain in urethra Kidney pain Tachycardia Lockjaw-type reaction

CEFTIN® FOR ORAL SUSPENSION (MULTIPLE-DOSE DOSING REGIMENS): In Clinical Trials: In clinical trials using multiple doses of cefuroxime axetil powder for oral suspension, pediatric patients (96.7% of whom were younger than 12 years of age) were treated with the recommended dosages of cefuroxime axetil (20 to 30 mg/kg per day divided twice a day up to a maximum dose of 500 or 1,000 mg per day, respectively). There were no deaths or permanent disabilities in any of the patients in these studies. Eleven US patients (1.2%) discontinued medication due to adverse events thought by the investigators to be possibly, probably, or almost certainly related to drug toxicity. The discontinuations were primarily for gastrointestinal disturbances, usually diarrhea or vomiting. During clinical trials, discontinuation of therapy due to the taste and/or problems with administering this drug occurred in 13 (1.4%) pediatric patients enrolled at centers in the US.

The following adverse events were thought by the investigators to be possibly, probably, or almost certainly related to cefuroxime axetil for oral suspension in multiple-dose clinical trials (n=931 cefuroxime axetil-treated US patients).

Adverse Reactions Ceftin for Oral Suspension Multiple-Dose Dosing Regimens—Clinical Trials			
Incidence ≥1%	Diarrhea/loose stools Dislike of taste Diaper rash Nausea/vomiting		8.6% 5.0% 3.4% 2.6%
Incidence <1% but >0.1%	Abdominal pain Flatulence Gastrointestinal infection Candidiasis Vaginal irritation Rash Hyperactivity	Irritable behavior Eosinophilia Positive direct Coombs' test Elevated liver enzymes Viral illness Upper respiratory infection Sinusitis	Cough Urinary tract infection Joint swelling Arthralgia Fever Ptyalism

In Postmarketing Experience: In addition to the events reported during clinical trials with Ceftin for Oral Suspension, the following adverse experiences have been reported in postmarketing surveillance: hypersensitivity reactions (including rash, pruritus, urticaria, and anaphylaxis).

CEPHALOSPORIN-CLASS ADVERSE REACTIONS: In addition to the adverse reactions listed above that have been observed in patients treated with cefuroxime axetil, the following adverse reactions and altered laboratory tests have been reported for cephalosporin-class antibiotics: renal dysfunction, toxic nephropathy, hepatic cholestasis, aplastic anemia, hemolytic anemia, hemorrhage, increased prothrombin time, increased BUN, increased creatinine, false-positive test for urinary glucose, increased alkaline phosphatase, neutropenia, thrombocytopenia, leukopenia, elevated bilirubin, pancytopenia, and agranulocytosis.

Several cephalosporins have been implicated in triggering seizures, particularly in patients with renal impairment when the dosage was not reduced (see DOSAGE AND ADMINISTRATION AND OVERDOSAGE). If seizures associated with drug therapy occur, the drug should be discontinued. Anticonvulsant therapy can be given if clinically indicated.

OVERDOSAGE: Overdosage of cephalosporins can cause cerebral irritation leading to convulsions. Serum levels of cefuroxime can be reduced by hemodialysis and peritoneal dialysis.

DOSAGE AND ADMINISTRATION: (For complete DOSAGE AND ADMINISTRATION information, see full prescribing information.)

Patients with Renal Failure: The safety and efficacy of cefuroxime axetil in patients with renal failure have not been established. Since cefuroxime is renally eliminated, its half-life will be prolonged in patients with renal failure.

Neonatologists Have The Freedom To Focus On What's Really Important.

Founded in 1979 as a locally based neonatology group, Pediatrix Medical Group has grown to become the nation's leading provider of Neonatology Physician Management Services. Pediatrix offers the chance to practice medicine free of restrictions and administrative burdens. We also provide you stable income, career advancement, and research opportunities through a variety of clinical practice settings.

As a member of our growing medical staff of neonatologists and pediatric intensivists, your primary focus is on patient care. The entire organization has been created by physicians with physicians needs in mind. In addition, we are strategically positioned to face whatever changes the healthcare reform movement brings.

Along with competitive salaries, we provide outstanding benefits including:

- * STOCK OPPORTUNITIES
- * PAID MEDICAL, DENTAL, PRESCRIPTION AND VISION COVERAGE
- * PAID LIFE AND DISABILITY INSURANCE
- * PAID MALPRACTICE INSURANCE
- * RETIREMENT PLAN
- * GENEROUS CME ALLOWANCE

You can apply for full-time permanent employment in one of our hospital units or travel within our system, providing coverage where it is needed most. With units throughout the United States and Puerto Rico, we have immediate and potential opportunities available in:

ARIZONA NEW JERSEY
CALIFORNIA OKLAHOMA
COLORADO TEXAS
ILLINOIS VIRGINIA
MICHIGAN WEST VIRGINIA

Additional opportunities are also available.

If you are interested in employment or merger opportunities, please contact Lori Abolafia or Cindy Sowinski in the Physician Relations Department at (800)243-3839 or write to:

YOUR HEALTH CARE RESOURCE

LOCUM TENENS

Try our patience.

VISTA's employee-owners have a black belt in patience. They go into overtime finding one-of-a-kind locum tenens assignments for our physicians. But while our blood pressure may be up—you'll never see us sweat.

Bug us about licensure and unique housing requirements. Rattle us about malpractice insurance and hospital privileges. Pester us about practice settings. Call us anytime, 24 hours a day, 365 days a year. Because having a share of VISTA gives

our employee-owners incentive to get things done. So go ahead, call **1-800-366-1884** and try our patience.

Pediatrician/ Neonatologist

Beautiful northern Michigan community on the shores of Lake Superior needs a pediatrician/neonatologist (BC/BE) to replace retiring physician in private 3-person group practice of general and consultative pediatrics and neonatology. Applicant will have opportunity to expand general pediatric practice and take a leadership role in provision of neonatal services. Marquette General Hospital is a teaching regional medical center with 200-member medical staff and Level II-III neonatal nursery. Marquette is a university community with excellent schools and outstanding four-season environment. Please respond to Robert J. Raica, Assistant Administrator, Marquette General Hospital, 420 W. Magnetic Street, Marquette, MI 49855. (906) 225-3447. Fax (906) 225-3031.

DIVISION HEAD, PEDIATRIC EMERGENCY MEDICINE—Design integrated program of care for Henry Ford Health System, Detroit. PEM service sees 75,000/year system-wide; has three-year fellowship program. Pediatrics has 100+ physicians at 36 sites plus core of subspecialists in 40 specialties. Progressive system supports myriad medical education and research programs; offers financial strength, organizational stability, eligibility for appointment at Case Western Reserve University. Position requires BC physician with administrative, teaching skills, and vision to direct service in true managed care setting. For information packet, contact: Carole Gregory @ MedQuest: 800-220-6331; fax: 610-640-4392; e-mail: 72253.2751@compuserve.com.

ILLINOIS—Academic hematologist/oncologist. The Department of Pediatrics, Loyola University Chicago, Stritch School of Medicine, is seeking an additional full-time BC/BE pediatric hematologist/oncologist. This position is hospital based with responsibility in patient care, teaching, clinical research, and Children's Cancer Group activities. Interested applicants may send their current CV and accompanying letter to: Carlos R. Suarez, MD, Director, Division of Pediatric Hematology/Oncology, Loyola University Medical Center, 2160 S First Ave, Maywood, IL 60153. Contact: Peggy at 708-327-9136 or fax CV to: 708-327-9211. Loyola University Chicago is an Equal Opportunity Educator and Employer. Qualified persons are not subject to discrimination on the basis of a handicap.

NEONATOLOGIST, DIRECTOR—13-bed, Level II+ NICU. 300+ admissions and 2,200 births in 1995. Candidate must be Board certified. University town with 52,000 residents. Faculty status with Southern Illinois University School of Medicine. Excellent culture, recreation, schools, and family environment. Fax CV with references to: 618-549-1104 or call Andrew H. Marcec at: 800-333-1929. Southern Illinois Healthcare, Carbondale, IL adding 24 physicians in several specialties. Physician couples invited.

BC/BE PEDIATRICIAN—37-member multispecialty clinic with 15 specialties is expanding the pediatric department. 1:4 call. Full benefit package. Shareholder track. Faculty status with Southern Illinois University School of Medicine teaching residents and MS I students. Excellent cultural, recreational, schools and family environment. Fax CV to: 618-549-1104 or call Sue Ridgway at: 800-333-1929. Southern Illinois Healthcare, Carbondale, IL adding 24 physicians in several specialties. Physician couples invited.

DIVISION HEAD, PEDIATRICS—The Division of Pediatrics, Eastern Region, Henry Ford Health System, is seeking new leadership for its Cottage Hospital/Pierson Clinic location. The division head will be responsible for the oversight and coordination of pediatric physician and nonphysician providers in the Henry Ford Medical Group ambulatory centers within the region. This individual will also be responsible for pediatric care rendered within Henry Ford Cottage Hospital including the newborn nursery, short stay unit and emergency department. As a member of one of the nation's largest group practices, Henry Ford Medical Group pediatricians practice within an educational and managed care environment. The department of pediatrics includes approximately 100 primary care pediatricians in 32 ambulatory centers throughout southeastern Michigan. The department also includes a core of pediatric subspecialties in cardiology, critical care, infectious diseases, allergy/immunology/pediatric surgery and other subspecialties. Pediatric surgery and other subspecialists deliver care at two health system hospitals. Children account for approximately 200,000 clinic visits, 75,000 ER visits and more than 8,000 deliveries within the system each year. The candidate must be Board certified in pediatrics and experienced in general ambulatory and inpatient pediatric care. Previous medical administrative experience is strongly preferred. He/She should also have an interest in working in an academic environment. Through its recent affiliation with Case Western Reserve University, the Henry Ford Medical Group staff are eligible for research and academic appointments. Interested parties should forward their curriculum vitae to: Michael J. Deegan, MD, Chief Medical Officer, Eastern Region, Henry Ford Health System, 159 Kercheval Ave, Grosse Pointe Farms, MI 48236. 313-640-2402, fax: 313-884-8927, or Jay E. Henry Ford Health System is an Equal Opportunity Employer, M/F/H.

CENTRAL OHIO—Established, highly successful and stable 50+ physician multispecialty group seeks to add two pediatricians. Excellent quality of life with 1:4 call, one office and one hospital. Community of 65,000, only 45 minutes from Columbus and Ohio State University. Tremendous salary, lucrative production bonus + generous benefits. Contact: Todd Dillon: 800-546-0954, ID #4096, or fax CV: 317-581-0367.

TOP HOSPITAL SEEKS TOP PEDIATRICIAN—Here's an exceptional opportunity to join a two-member group practice affiliated with Jackson's progressive, 488-bed Foote Hospital. As the group's third pediatrician, you are offered: call 1:3, \$100,000 base salary plus production, student loan forgiveness and partnership or employment options. Recently selected as one of the nation's top performing hospitals, Foote is the only Michigan hospital in its non-teaching peer group named to the 1995 list of 100 Top Hospitals—Benchmark for Success study. Foote Hospital earned this distinction based on exemplary performance in the areas of quality of care, utilization of services, and financial stability. Recognized throughout the region, Foote Hospital offers state-of-the-art facilities, including advanced radiology and available MRI. Its staff of 230 physicians serves a rapidly expanding service area of 285,000 people. Conveniently close to major sporting and cultural events in Chicago, Detroit, Ann Arbor, and Lansing; Foote Hospital is located at the center of a dynamic, economically strong recreational area. Nearby you'll find an abundance of golf courses, countless private and public lakes, affordable housing, and activities that range from symphony concerts to fishing, to cross-country skiing. Individuals interested in pursuing a career with a hospital at the top, please call or send your CV to: Kim Keller, Physician Recruiter, W.A. Foote Memorial Hospital, 205 N East Ave, Jackson, MI 49201. 800-894-2694 or fax: 517-789-5966. Equal Opportunity Employer.

NEONATOLOGIST, BC/BE with current ECMO training/experience to join six-member practice at tertiary two-roof perinatal/ECMO center. Contact: Anand Kantak, MD, 300 Locust St, Ste 540, Akron, OH 44302-1809. 216-379-8350. Fax: 216-379-8356.

SIOUX FALLS, SOUTH DAKOTA—Loan repayment and outstanding compensation package. Unusually diverse practice. Call 1 in 5. Teaching residents and medical students, if desired. Community rated as MONEY MAGAZINE'S # 1 city in 1992; great recreational opportunities, plenty of cultural outlets, highly rated schools, and colleges. Contact: Diane Safner, 800-546-0954, I.D.#4070; fax: 314-726-3009.

TWO-PERSON PEDIATRIC PRACTICE in Arlington Hts, Illinois (a NW suburb of Chicago), seeking a part-time/full-time pediatrician for an established, busy, growing, general pediatric practice. Phone: 847-392-1880. Fax: 847-392-1980.

FULL TIME ACADEMIC POSITIONS FOR THE CLINICAL SCHOLAR

Critical Care

Pulmonology-2nd Position

Neurology-2nd Position

The Department of Pediatrics of the University of South Dakota School of Medicine is seeking faculty to either begin new programs or add depth to existing ones. These are full-time academic positions which are ideally suited to the clinician/teacher who wishes to be instrumental in the development of new programs in the only academic pediatric medical facility in the region. We are particularly interested in faculty who are capable of developing warm and caring relationships with patients and their families and who enjoy working closely with referring physicians.

Although our program is heavily slanted toward medical student education and patient care, excellent resources for clinical research are available and funded by the Department. This is a unique opportunity to get in on the ground floor for building programs which will have a major impact on the health care of children in our region.

Sioux Falls is a growing community of 105,000 people with a referral base of 600,000. The strength of its economy and family oriented quality of life have recently earned it national recognition as the number one city in which to live. Compensation is quite competitive and a comprehensive benefits package is offered. EOE/AEE

Send CV or call: Lawrence J. Fenton, M.D. at (800) 468-3333
Professor and Chairman FAX (605) 333-1562
Department of Pediatrics
USD School of Medicine
1100 South Euclid Avenue
Sioux Falls, South Dakota 57117-5039

ADULT/PEDIATRIC GASTROENTEROLOGIST—BC/BE adult as well as pediatric gastroenterologist with special interest in transplant hepatology. The candidate is required to be Board certified in internal medicine and in pediatrics, and must have experience in clinical and basic research in viral hepatitis. Submit application and copies of first authored publications to: Dr N.F. LaRusso, Chair, Dept of Gastroenterology, Mayo Clinic, 200 First St SW, Rochester, MN 55905. *Mayo Foundation is an Affirmative Action/Equal Opportunity Educator and Employer.*

PEDIATRICS/INTERNAL MEDICINE. 13-physician multispecialty group practice is looking for a BC/BE dual residency trained physician to join the group. Currently one IM/PEDS physician on staff. Pediatric work load increasing with the addition of OB/GYN to the group. Opportunity offers competitive wage and benefits package with early shareholder opportunity. Community offers the high quality of life of a small university city in a rural state. Group mix includes family practice, internal medicine, pediatrics, surgery, orthopedics, ENT, and OB/GYN. For further information, contact: Patrick Waligoske, Administrator, Brookings Medical Clinic, 400 22nd Ave, Brookings, SD 57006. 800-658-5405. Fax: 605-697-6939.

WISCONSIN/MILWAUKEE AND SOUTHEASTERN WISCONSIN—Children's Medical Group, an affiliate of Children's Hospital of Wisconsin, is seeking BC/BE pediatricians interested in new or existing practices, as well as 1996 grads wanting to join an established practice. We offer guaranteed, competitive salary with bonus and excellent fringe benefits, including vacations, CME's, malpractice, health, life, dental and disability insurance. Just 90 miles from Chicago, Milwaukee has long been established as a cultural arts community with recreational options, affordable living, and excellent quality of life. Contact: Thomas H. Dunigan, MD, PO Box 1997, Milwaukee, WI 53201. 414-266-6400.

MILWAUKEE/NEONATOLOGIST—Community oriented medical center has immediate opening for BC/BE neonatologist to join expanding clinical section. Family centered environment serving diverse community. Research and teaching involvement. Flexible in-house call arrangement. Strong administrative support. Preferred candidates will possess excellent communication and clinical skills with a definite interest in outreach participation. Milwaukee, the "city of festivals" on Lake Michigan offers solid midwestern values, affordable living, a strong education system, cultural and sporting activities, and year-round recreational options. For more detailed information without cost or obligation, fax CV to: Rebecca Turley, 414-785-0895 or call: 800-338-7107.

ANN ARBOR— Full and part-time physicians to staff busy pediatric emergency/urgent care center. BC/BE in pediatrics, dual PEDS/IM, dual PEDS/ER, or PEDS/ER fellowship training. Over 20,000 visits per year, excellent specialty back-up, resident and student teaching, paid malpractice, generous moving expenses, and excellent remuneration. For more information, contact: Daniel Ramey at 800-466-EPMG, or fax CV to 313-995-2913.

BC/BE PEDIATRICIAN and a pediatric physician's assistant or nurse practitioner needed full-time in the suburbs of Chicago. Stratford Pediatrics is a well-established, growing practice that offers a competitive salary and benefits package. If interested, send CV to: Dr Victor Zuckerman, Stratford Pediatrics, 231 S Gary Ave, Ste 108, Bloomingdale, IL 60108 or call 708-893-3953 for more information.

THE SECTION OF EMERGENCY MEDICINE, Division of Pediatric Emergency Medicine, at the University of Michigan in Ann Arbor is seeking physicians for full-time academic and clinical positions in pediatric emergency medicine. Responsibilities include house officer training, research, as well as direct patient care in a setting providing both primary and tertiary care experience. Protected time for research and education will be provided. The emergency department is an American College of Surgeons Level I pediatric and adult trauma center. Applicants should have fellowship training in pediatric emergency medicine, certification in pediatric emergency medicine, or dual residency training in pediatrics and emergency medicine. Excellent fringe benefit package available. If interested, please send curriculum vitae to: David J. Treloar, MD, MS, Division Director, Children's Emergency Services, Division of Pediatric Emergency Medicine, F2306 MCHC, UMMC, 1500 E Medical Center Dr, Ann Arbor, MI 48109-0217. The University of Michigan is an Equal Opportunity/Affirmative Action Employer.

SOUTH TEXAS—Great opportunity for a BC/BE pediatrician to join well-established and busy group practice. On-call every 7th weekend. Good starting salary and benefits. Beautiful town, 45 minutes from beach. Send CV to: D. DeLeon, 1330 E 6th St, Ste 201, Weslaco, TX 78596. 210-969-2904. J-1 Visa accepted.

CALIFORNIA—Neonatologists (BC/BE) positions available in greater Los Angeles area with large, multi-hospital based private practice group, specializing in neonatology and pediatric intensive care. Competitive starting salary with profit sharing bonus and long term partnership options. Positions available now in Pomona/Whittier area. Contact: George Franco, MD, 818-902-2943; others available in early 1996. Contact: California Critical Childrens Care Medical Group, 12021 Wilshire Blvd, Ste 613, Los Angeles, CA 90025.

NEVADA—Excellent opportunity for pediatrician. Growing, six-person group. Opportunity for individual practice within group. Salary and benefits well above average, including allowance towards relocation expenses and repayment of education loans. Early partnership for right individual. Call John Richert: 702-733-0884.

SAN FRANCISCO—Exceptional opportunity for BC/BE pediatrician to join a thriving practice within the city of SF. We offer an excellent salary for either full or part-time practice with potential for partnership. As about half of our patients prefer to speak Cantonese, it would be useful for applicants to have some familiarity with the language. Please fax letter and resume (with references) to: Craig Fong, MD, at 415-566-8486.

OPPORTUNITIES—Northwest

PEDIATRICS/PORTLAND, OREGON—Northwest Permanente, PC, a physician managed multispecialty group providing care for 380,000 members of Kaiser Permanente, is seeking BC/BE pediatricians for full-time and part-time positions in the Portland/Vancouver area to staff general pediatric clinics (includes urgent care call). We offer a stimulating professional environment in one of the most successful managed care systems in the country, plus a quality lifestyle inherent to the Pacific Northwest. Our physicians receive a competitive salary and benefits package which includes a generous retirement program, professional liability coverage, sabbatical leave and more. For more information, please forward CV to: P.D. Weiland, MD, Regional Medical Director, Northwest Permanente, PC, 500 NE Multnomah, Ste 100, Portland, OR 97232-2099. EOE.

ALASKA—BC/BE pediatrician needed to join 15-physician multispecialty group practice in Fairbanks. One physician opportunity with coverage from family practice department and other local pediatricians. Competitive wages and benefits. Opening in May 1996. Contact: Administrator, Fairbanks Clinic, 1919 Lathrop St, #100, Fairbanks, AK 99701. Phone inquiries: 907-451-4295. Fax inquiries: 907-452-4207. No recruiters please.

OREGON—Six-member pediatric group is seeking a BC/BE pediatrician. On-call time includes acute referrals from family physicians, general pediatric hospital patients, and NICU and ICU patients. Excellent benefits and early partnership available. Send CV to: Michele Duncan, Central Oregon Pediatrics Associates, 2200 Professional Ct, Bend, OR 97701.

NORTHERN UTAH AND IDAHO—Needed immediately! Intermountain Health Care, one of the nation's largest non-profit, integrated health care systems with 24 hospitals, has outstanding practice opportunities available in scenic northern Utah and southern Idaho for BC/BE pediatricians. Practice in settings of wide open spaces, spectacular mountain landscapes, low crime, and family oriented lifestyles. These are employment positions with competitive salaries and liberal benefits. For more information, send CV to: Wilf Rudert, IHC Physician Services, 36 S State St, Ste 1600, Salt Lake City, UT 84111, or call toll-free: 800-888-3134.

PART-TIME/JOB SHARING—Enjoyable “solo” practice in area popular for retirement because of its mild climate and proximity to winter and summer recreation areas. Nearby is the Pacific Crest Trail, rafting, and salmon fishing in the Rogue, Umpqua and Klamath Rivers, and skiing on Mt Ashland; Britt musical and Shakespeare festivals; symphony; two hours to ocean; Crater Lake. Regional medical center is across the street from office. Little, but occasional hospital work. Neonatologists handle sick newborns. Office atmosphere is pleasant due to efficient, team oriented staff, and reasonable scheduling. Patients expect high quality and up-to-date care. Few evening phone calls. Good pay for the right person. Work two or more days per week, flexibly scheduled. Working in stretches with blocks off is OK. Easy interstate and air access to California, Washington or east. Come see why people are attracted to this pleasant city. Contact: Alan Frierson, MD, 691 Murphy Rd, Ste 114, Medford, OR 97504. 541-773-3688.

□

WASHINGTON (SOUTHWEST)—Five-pediatrician group seeks BC/BE pediatrician. Excellent schools. Ocean, mountains, Portland, 30-60 minutes away. Contact: Kathleen Schatzel, MD, 971 11th Ave, Longview, WA 98632. 360-577-1771.

OPPORTUNITIES—Foreign

CHAIR, DIVISION OF NEONATAL/PERINATAL MEDICINE, University of Western Ontario. The Department of Paediatrics at St Joseph's Health Centre, University of Western Ontario, is seeking a Chair for the Division of Neonatal/Perinatal Medicine. The division comprises 21 members, including seven geographic full-time neonatologists. The division maintains a Level III neonatal coverage for southwestern Ontario with 19,000 annual births. It is closely linked with other sections of the department of paediatrics and the division of maternal and fetal medicine of the department of obstetrics and gynaecology, and is considered one of the best perinatal outreach programs in Canada, and Antenatal/Neonatal Databases. The division has active clinical and basic science research programs within the NICU and the Maternal and Newborn Health Division of the Lawson Research Institute. Several members of the division are members of the internationally renowned MRC Group in Fetal and Neonatal Health with an annual funding of \$1.5 million, and based at the Lawson Research Institute. The Chair of the Division will play a leadership role in teaching, clinical service, community outreach, and research. Candidates are required to have fellowship of the Royal College of Physicians of Canada or equivalent qualification, with national or international recognition for their academic and administrative abilities. Positions are subject to budget approval. In accordance with Canadian Immigration requirements, this advertisement is directed to Canadian citizens and permanent residents of Canada. The University of Western Ontario is committed to employment equity, and welcomes diversity in the workplace, and encourages applications from all qualified individuals, including women, members of visible minorities, aboriginal persons, and persons with disabilities. Candidate must be eligible for an Ontario license to practice. Interested individuals are requested to send a current curriculum vitae by May 1, 1996 to: **R. Morrison Hurley, MD, FRCPC, Professor and Chair, Dept of Paediatrics, University of Western Ontario—Children's Hospital of Western Ontario, 800 Commissioners Rd E, London, ON Canada N6C 2V5.**

GENERAL PEDIATRICIANS & PEDIATRIC ENDOCRINOLOGIST

The Saudi Arabian Oil Company (Saudi Aramco), the world's leading petroleum enterprise, has grown by investing in facilities, technology and people. Our Dhahran Health Center, a 483-bed facility that encompasses all major specialties and most subspecialties, operates outpatient and emergency care clinics in its 3 surrounding communities including an 80-bed hospital in Al-Hasa. Saudi Aramco employees and their dependents comprise the 230,000 patient population. We are currently seeking General Pediatricians and a Pediatric Endocrinologist.

American Board Certification and 2 years' experience after Boards are required.

Our compensation package consists of a base salary and an expatriate premium (up to 45% of the base salary). Annually, there are up to 11 paid holidays, plus you will earn 38 vacation days, 4 travel days and a round-trip air fare to the U.S. or Canada. Additional benefits include a company-matched savings plan, non-contributory group life insurance, free health care in Saudi Arabia and much more.

For consideration, call our 24 hour, 7 days per week toll-free number at: **1-800-221-3333, ext. R-11.**

PEDIATRIC CONFERENCE HILTON HEAD, SC, MAY 19-25, 1996. Hackensack University Medical Center's Departments of Pediatrics and Medical Education present the 14th annual conference: **Developmental/Behavioral Disorders and A Spectrum of Pediatric Challenges: Update 1996**, May 19-25, 1996 at the Hilton Head Resort in Hilton Head Island, SC. In addition to an outstanding educational program, the conference site offers excellent opportunities for recreation and relaxation. **Accreditation:** register for all or part of the conference and earn up to 50 credit hours in Category 1 from the AMA. **Distinguished National Faculty:** representing general pediatrics, pediatric medical/surgical subspecialties, and developmental/behavioral pediatrics present plenary sessions, round table discussions, and workshops. The first half of the conference focuses primarily on **developmental/behavioral pediatrics** (Sunday through Wednesday) and the second half on **general pediatrics and pediatric subspecialties** (Wednesday through Saturday). The conference addresses timely topics: new approaches to office diagnosis, management guidelines, research breakthroughs; as well as the impact of healthcare reform and managed care. **Tuition:** based on number of days in attendance; with complimentary syllabus; "shorehouse" cookouts for attendees and families (Sunday & Friday evenings); continental breakfast/refreshment breaks; and other amenities. "Early Bird" registration is available. **For more information, contact:** Marvin Gottlieb, MD, Hackensack University Medical Center, Dept Pediatrics, 30 Prospect Ave, Hackensack, NJ 07601. 201-996-5300.

Serono Symposia USA
The Lawson Wilkins Pediatric Endocrine Society
International Symposium on
Molecular Biology for Endocrinologists
May 2-4, 1996

Washington, D.C. - Renaissance Hotel
Walter L. Miller, M.D., *Chair*
University of California, San Francisco

This program will review the principal techniques used in molecular biology and their application to pediatric endocrine and other areas of medical research. Emphasis will be placed on the conceptual basis of the techniques presented, their selection, uses, and limitations. The program is intended for all those interested in applying the techniques of molecular biology to their research and should be especially useful for individuals in fellowship training. (This meeting is being held prior to the Pediatric Academic Society's Annual Meeting on May 6-10, 1996.)

For more information regarding registration, please contact:
Leslie Nies, Serono Symposia USA, Inc.
100 Longwater Circle, Norwell, MA 02061
800-283-8088 or 617-982-9000

MERGERS AND ACQUISITIONS

Who's looking after your group while you look after the neonates?

Like you, we started out as a locally based neonatology group. But as the years progressed, changes in the industry helped us realize strength in numbers might be our advantage when facing an uncertain future.

In just a few short years **Pediatrix** has grown into a financially secure, national medical group with 120 physicians who share that idea.

Of course we do all the standard administrative services, but we've added a few programs such as national quality assurance and peer review. We fund research and allow you the time to teach.

You can even advance your career through our corporate ladder.

We don't stop there. The entire organization has been created by physicians to benefit physicians. We are not a MSO or locum tenens firm, but a group that ensures you complete professional autonomy while you do what you do best, practice neonatology.

Sound interesting? Let us put you in touch with neonatologists from across the country who can give you the facts.

Pediatrix Medical Group.
Let's face the future together.

Call us today at: 1-800-243-3839. Ask for Ms. Stephenson

PEDIATRIX
MEDICAL GROUP

6TH ANNUAL PEDIATRIC BOARD REVIEW, Bethesda, Maryland, SEPTEMBER 16-21, 1996. Contact: Christine Sturges, Children's National Medical Center, 111 Michigan Ave, NW, Washington, DC 20010. 800-787-0070.

CONGENITAL HEART DISEASE in the Adult. May 5-8, 1996. Stevenson, Washington. Sponsored by American College of Cardiology. Program Co-directors David J. Sahn, MD, FACC and Peter P. Liu, MD, FRCP (C), FACC. 24.5 category 1 credit hours. For information, call: 800-257-4739. Fax: 301-897-9745.

ONCE-A-DAY

SUPRAX®

cefixime

ORAL SUSPENSION
100 mg/5 mL
TABLETS
400 mg

Working 24 hours a day

Brief Summary

SUPRAX®
Cefixime
ORAL

Please see package insert for full Prescribing Information.

INDICATIONS AND USAGE

SUPRAX is indicated in the treatment of the following infections when caused by susceptible strains of the designated microorganisms:

Uncomplicated Urinary Tract Infections caused by *Escherichia coli* and *Proteus mirabilis*.
Otitis Media caused by *Haemophilus influenzae* (beta-lactamase positive and negative strains), *Moraxella (Branhamella) catarrhalis* (most of which are beta-lactamase positive), and *Streptococcus pyogenes*.
Note: For information on otitis media caused by *Streptococcus pneumoniae*, see **CLINICAL STUDIES** section.

Pharyngitis and Tonsillitis, caused by *S pyogenes*.
Note: Penicillin is the usual drug of choice in the treatment of *S pyogenes* infections, including the prophylaxis of rheumatic fever. SUPRAX is generally effective in the eradication of *S pyogenes* from the nasopharynx; however, data establishing the efficacy of SUPRAX in the subsequent prevention of rheumatic fever are not available.

Acute Bronchitis and Acute Exacerbations of Chronic Bronchitis, caused by *S pneumoniae* and *H influenzae* (beta-lactamase positive and negative strains).

Uncomplicated Gonorrhea (Cervical/Urethral), caused by *Neisseria gonorrhoeae* (penicillinase- and nonpenicillinase-producing strains).

Appropriate cultures and susceptibility studies should be performed to determine the causative organism and its susceptibility to SUPRAX; however, therapy may be started while awaiting the results of these studies. Therapy should be adjusted, if necessary, once these results are known.

*Efficacy for this organism in this organ system was studied in fewer than 10 infections.

CLINICAL STUDIES

In clinical trials of otitis media in nearly 400 children between the ages of 6 months to 10 years, *S pneumoniae* was isolated from 47% of the patients, *H influenzae* from 34%, *M (B) catarrhalis* from 15%, and *S pyogenes* from 4%.

The overall response rate of *S pneumoniae* to cefixime was approximately 10% lower and that of *H influenzae* or *M (B) catarrhalis* approximately 7% higher (12% when beta-lactamase positive strains of *H influenzae* are included) than the response rates of these organisms to the active control drugs.

In these studies, patients were randomized and treated with either cefixime at dose regimens of 4 mg/kg BID or 8 mg/kg QD, or with a standard antibiotic regimen. Sixty-nine percent to 70% of the patients in each group had resolution of signs and symptoms of otitis media when evaluated 2 to 4 weeks posttreatment, but persistent effusion was found in 15% of the patients. When evaluated at the completion of therapy, 17% of patients receiving cefixime and 14% of patients receiving effective comparative drugs (18% including those patients who had *H influenzae* resistant to the control drug and who received the control antibiotic) were considered to be treatment failures. By the 2- to 4-week follow-up, a total of 30% to 31% of patients had evidence of either treatment failure or recurrent disease.

Bacteriological Outcome of Otitis Media at 2 to 4 Weeks Posttherapy Based on Repeat Middle Ear Fluid Culture or Extrapolation from Clinical Outcome

Organism	Cefixime ^(a) 4 mg/kg BID	Cefixime ^(a) 8 mg/kg QD	Control ^(a) drugs
<i>Streptococcus pneumoniae</i>	48/70 (69%)	18/22 (82%)	82/100 (82%)
<i>Haemophilus influenzae</i> beta-lactamase negative	24/34 (71%)	13/17 (76%)	23/34 (68%)
<i>Haemophilus influenzae</i> beta-lactamase positive	17/22 (77%)	9/12 (75%)	1/1 ^(b)
<i>Moraxella (Branhamella)</i> <i>catarrhalis</i>	26/31 (84%)	5/5	18/24 (75%)
<i>S pyogenes</i>	5/5	3/3	6/7
All Isolates	120/162 (74%)	48/59 (81%)	130/166 (78%)

^(a) Number eradicated/number isolated.

^(b) An additional 20 beta-lactamase positive strains of *H influenzae* were isolated, but were excluded from this analysis because they were resistant to the control antibiotic. In 19 of these, the clinical course could be assessed, and a favorable outcome occurred in 10. When these cases are included in the overall bacteriological evaluation of therapy with the control drugs, 140/185 (76%) of pathogens were considered to be eradicated.

CONTRAINDICATIONS

SUPRAX is contraindicated in patients with known allergy to the cephalosporin group of antibiotics.

WARNINGS

BEFORE THERAPY WITH SUPRAX IS INSTITUTED, CAREFUL INQUIRY SHOULD BE MADE TO DETERMINE WHETHER THE PATIENT HAS HAD PREVIOUS HYPERSENSITIVITY REACTIONS TO CEPHALOSPORINS, PENICILLINS, OR OTHER DRUGS. IF THIS PRODUCT IS TO BE GIVEN TO PENICILLIN-SENSITIVE PATIENTS, CAUTION SHOULD BE EXERCISED BECAUSE CROSS-HYPERSENSITIVITY AMONG BETA-LACTAM ANTIBIOTICS HAS BEEN CLEARLY DOCUMENTED AND MAY OCCUR IN UP TO 10% OF PATIENTS WITH A HISTORY OF PENICILLIN ALLERGY. IF AN ALLERGIC REACTION TO SUPRAX OCCURS, DISCONTINUE THE DRUG. SERIOUS ACUTE HYPERSENSITIVITY REACTIONS MAY REQUIRE TREATMENT WITH EPINEPHRINE AND OTHER EMERGENCY MEASURES, INCLUDING OXYGEN, INTRAVENOUS FLUIDS, INTRAVENOUS ANTIHISTAMINES, CORTICOSTEROIDS, PRESSOR AMINES, AND AIRWAY MANAGEMENT, AS CLINICALLY INDICATED.

Administer cautiously to allergic patients.

SUPRAX® Cefixime

Treatment with broad-spectrum antibiotics, including SUPRAX, alters the normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is a primary cause of severe antibiotic-associated diarrhea, including pseudomembranous colitis.

Pseudomembranous colitis has been reported with the use of SUPRAX and other broad-spectrum antibiotics (including macrolides, semisynthetic penicillins, and cephalosporins); therefore, it is important to consider this diagnosis in patients who develop diarrhea in association with the use of antibiotics. Symptoms of pseudomembranous colitis may occur during or after antibiotic treatment and may range in severity from mild to life-threatening. Mild cases of pseudomembranous colitis usually respond to drug discontinuation alone. In moderate to severe cases, management should include fluids, electrolytes, and protein supplementation. If the colitis does not improve after the drug has been discontinued, or if the symptoms are severe, oral vancomycin is the drug of choice for antibiotic-associated pseudomembranous colitis produced by *C difficile*. Other causes of colitis should be excluded.

PRECAUTIONS

General: Use, especially when prolonged, may result in overgrowth of resistant organisms. If superinfection occurs during therapy, take appropriate measures.

Carefully monitor patients on dialysis. Adjust dosage of SUPRAX in patients with renal impairment and those undergoing continuous ambulatory peritoneal dialysis and hemodialysis. (See **DOSE AND ADMINISTRATION** in package insert.)

Prescribe cautiously in patients with a history of gastrointestinal disease, particularly colitis.

Drug Interactions: No significant drug interactions have been reported to date.

Drug/Laboratory Test Interactions: A false-positive reaction for ketones in the urine may occur with tests using nitroprusside but not with those using nitroferricyanide.

SUPRAX administration may result in a false-positive reaction for glucose in the urine using Clinistix®, ** Benedict's solution, or Fehling's solution. Use glucose tests based on enzymatic glucose oxidase reactions (such as Clinistix*** or Tes-Tape***).

A false-positive direct Coombs test has been reported during treatment with other cephalosporin antibiotics; therefore, it should be recognized that a positive Coombs test may be due to the drug.

Carcinogenesis, Mutagenesis, Impairment of Fertility: Although no lifetime animal studies have been conducted to evaluate carcinogenic potential, no mutagenic potential of SUPRAX was found in standard laboratory tests. In rats, reproductive studies revealed no fertility impairment at doses up to 125 times the adult therapeutic dose.

Usage in Pregnancy: Pregnancy Category B: Reproduction studies have been performed in mice and rats at doses up to 400 times the human dose and have revealed no evidence of harm to the fetus due to SUPRAX. There are no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Labor and Delivery: SUPRAX has not been studied for use during labor and delivery. Treatment should only be given if clearly needed.

Nursing Mothers: It is not known whether SUPRAX is excreted in human milk. Consider discontinuing nursing temporarily during treatment with this drug.

Pediatric Use: Safety and effectiveness of SUPRAX in children aged less than 6 months old have not been established. The incidence of gastrointestinal adverse reactions, including diarrhea and loose stools, in pediatric patients receiving the suspension, was comparable to that seen in adult patients receiving tablets.

ADVERSE REACTIONS

Most adverse reactions observed in clinical trials were of a mild and transient nature. Five percent (5%) of patients in the US trials discontinued therapy because of drug-related adverse reactions. The most commonly seen adverse reactions in US trials of the tablet formulation were gastrointestinal events, which were reported in 30% of adult patients on either the BID or the QD regimen. Clinically mild gastrointestinal side effects occurred in 20% of all patients, moderate events occurred in 9% of all patients, and severe adverse reactions occurred in 2% of all patients. Individual event rates included diarrhea 16%, loose or frequent stools 6%, abdominal pain 3%, nausea 7%, dyspepsia 3%, and flatulence 4%. The incidence of gastrointestinal adverse reactions, including diarrhea and loose stools, in pediatric patients receiving the suspension was comparable to that seen in adult patients receiving tablets.

These symptoms usually responded to symptomatic therapy or ceased when SUPRAX was discontinued.

Several patients developed severe diarrhea and/or documented pseudomembranous colitis, and a few required hospitalization.

The following adverse reactions have been reported following the use of SUPRAX. Incidence rates were less than 1 in 50 (less than 2%), except as noted above for gastrointestinal events.

Gastrointestinal: Diarrhea, loose stools, abdominal pain, dyspepsia, nausea, and vomiting. Several cases of documented pseudomembranous colitis were identified during the studies. The onset of pseudomembranous colitis symptoms may occur during or after therapy.

Hypersensitivity Reactions: Skin rashes, urticaria, drug fever, and pruritus. Erythema multiforme, Stevens-Johnson syndrome, and serum sickness-like reactions have been reported.

Hepatic: Transient elevations in SGPT, SGOT, and alkaline phosphatase.

Renal: Transient elevations in BUN or creatinine.

Central Nervous System: Headaches or dizziness.

Hemic and Lymphatic Systems: Transient thrombocytopenia, leukopenia, and eosinophilia. Prolongation in prothrombin time was seen rarely.

Other: Genital pruritus, vaginitis, candidiasis.

The following adverse reactions and altered laboratory tests have been reported for cephalosporin-class antibiotics:

Adverse Reactions: Allergic reactions including anaphylaxis, toxic epidermal necrolysis, superinfection, renal dysfunction, toxic nephropathy, hepatic dysfunction including cholestasis, aplastic anemia, hemolytic anemia, hemorrhage, and colitis.

Several cephalosporins have been implicated in triggering seizures, particularly in patients with renal impairment when the dosage was not reduced (see **DOSE AND ADMINISTRATION** and **OVERDOSAGE**). If seizures associated with drug therapy occur, discontinue drug. Administer anticonvulsant therapy if clinically indicated.

Abnormal Laboratory Tests: Positive direct Coombs test, elevated bilirubin, elevated LDH, pancytopenia, neutropenia, agranulocytosis.

OVERDOSAGE

Gastric lavage may be indicated, otherwise, no specific antidote exists. Cefixime is not removed in significant quantities from the circulation by hemodialysis or peritoneal dialysis. Adverse reactions in small numbers of healthy adult volunteers receiving single doses up to 2 g of SUPRAX did not differ from the profile seen in patients treated at the recommended doses.

DOSE AND ADMINISTRATION

The tablet should not be substituted for the suspension in the treatment of otitis media. (See **CLINICAL PHARMACOLOGY** section.) For detailed dosing information, see the full Prescribing Information.
